7:8-9. Writers sometimes had reason to be anxious how recipients would understand their letters (*Cicero, *Letters to His Brother Quintus* 2.16.5) or to apologize when a letter inadvertently inflicted pain; more relevant here, moralists often regarded themselves as physicians inflicting pain only to restore the patient. When gentle warnings failed, harsher words were deemed appropriate. Frankness could bring *repentance, and a writer would not regret it if it benefitted the reader (Fronto, *Ad Verum Imperator* 1.4.1). Ancient teachers of speaking and letter-writing skills warned that open rebuke should be reserved for the most extreme circumstances; people were more likely to listen if one mixed in praise with blame. In the technical language of such teachers, "rebukes" were meant to generate shame and repentance.

7:10. Like the Old Testament (e.g., Amos 5:6-11) and Judaism, pagan philosophers sometimes recognized that divine judgments were not only acts of justice but also attempts to bring the guilty to repentance.

7:11-12. The sixfold repetition of "what" in 7:11 is rhetorical *anaphora* (cf. similar patterns in, e.g., Fronto, *Ad Antoninum Imperator* 2.6.2); piling up related terms was an acceptable expression of Greek rhetoric and simply added emphasis to the point of the terms. Others understood zeal to recoup what was lost (Diogenes Laertius 4.16).

7:13. Titus received great hospitality; hospitality to travelers was emphasized in antiquity, especially in Jewish and Christian circles.

7:14. Whereas self-commendation had to be done discreetly, boasting about one's friends was always considered acceptable in antiquity.

7:15-16. If the Corinthian Christians received Titus with such respect, it means that they saw him as Paul's own representative; one was always to receive a representative with the same honor one would grant the person being represented. Expressions of confidence could prepare hearers for (or even be shared during—Cicero, *Letters to Friends* 13.44.1) a request (coming in chaps. 8–9).

8:1-9
Models of Giving

Concerned with an active symbol of the unity of Jewish and *Gentile *churches (Rom 15:25-26) and relieving genuine poverty (Gal 2:10), Paul must do here the very thing that he has so assiduously avoided in his own ministry (1 Cor 9)—asking for funds. Although he had previously told the Corinthians about the need (1 Cor 16:1-3), some could be offended at what they would see as inconsistency. They had wanted Paul to accept pay as a regular philosophical teacher rather than maintain himself as a low-status artisan (12:13; cf. 1 Cor 9); by identifying himself with the poor in the congregation, Paul had risked alienating their well-to-do friends who despised artisans. Paul thus defends the collection in chapters 8–9.

8:1. Moral writers frequently offered positive role models. Public speakers used a standard *rhetorical technique called "comparison," which often served to stimulate moral competition. Civic rivalry was common, and many speakers, including Paul, were willing to appeal to ancient city and other geographical rivalries to spur their hearers on to greater zeal. Macedonia and Corinth were such rivals. When it appears in business documents, the term usually translated here "*grace" (8:1, 4, 6-7, 19; 9:14; cf. 8:9; 9:8, 15) can also refer to benefactors' generosity, to the gift or to gratitude (cf. 8:16; 9:15).

8:2. Some Greco-Roman aristocrats ridiculed those who lived simply, but other writers praised the simple lifestyle that enabled its followers to give generously. Philippi in Macedonia was prosperous, but the prosperity had not filtered down to the poor, who often were unemployed; further, persecution and ostracism may have increased the financial hardship of the Christians there.

8:3. One was to give alms according to one's ability (Ex 35:24; Deut 15:14; cf. Ezra 2:69; Tobit 4:8, 16), but the Macedonians went beyond this rule. Greco-Roman sources used phrases like "according to their means" and "beyond their means" (NRSV) for benefaction.

8:4-5. The term translated "participation" (NASB), "sharing" (NIV, NRSV) or "fellowship" (KJV) was used technically in business documents of Paul's day for a "partnership." It could also signify an institution of Roman trade known as the *societas,* by which members contracted to supply whatever they had to fulfill their goal. Whether Paul conceives of this "partnership" officially or unofficially, it is clear that the Macedonians saw support, like hospitality, as a privilege. Judaism used the term here translated "service" (NIV) or "support" (NASB) technically for distributing alms for the poor.

8:6. Titus had raised this issue of support as well as the issue of the harsh letter when he was among them; because Titus has now reported back to him, Paul's concern as to whether the Corinthians were ready (9:3) probably indicates that they were not. Inscriptions often praise benefactors for "completing" a project to which they had pledged.

8:7. They have important spiritual gifts (1 Cor 1:5-7; 12:28) and other expressions of God's work among them. Paul uses praise as a basis for exhortation, as moralists often did. One could appeal to a reader's love for the writer to urge some action for the reader's good (Fronto, *Ad M. Caesarem* 5.1). If Paul means his circle's love for the Corinthians, superlative claims of love expressed affection (e.g., *Cicero, *Letters to Friends* 2.3.2; 13.1.5; 13.45.1).

8:8. Because contributors in antiquity were often forced to support public works (occasionally this forced support could bankrupt someone less well-to-do than the tax roll had indicated), speakers and writers calling for funds had to be particularly careful to stress the voluntary nature of the contributions. (Later Jewish teachers even charged charity collectors who pressured the poor for contributions with "oppressing the poor.") Paul alludes to the rhetorical technique of comparison he has used (8:1).

8:9. Moralists often appealed to role models, and Paul here uses the supreme one, insisting that the Corinthian Christians follow Christ's example of using their prosperity to enrich the poor. Like both Jewish and non-Jewish writers of his day, Paul can use the language of wealth figuratively as well as literally, but he may mean Christ's enrichment of believers literally, as provision through one another (8:14). Ancients could respect someone who remained poor to enrich others (cf. *Plutarch, *Lysander* 2.4; 30.2).

8:10-15
Give According to What You Have

8:10-12. "Eagerness" (NRSV) appears often in inscriptions about benefactors. The Corinthians had already eagerly committed themselves to supporting the Jerusalem church (1 Cor 16:1-3). (Commentators note that the phrase translated "last year" or "a year ago" could mean from nine to fifteen months earlier.) Because their church was more prosperous than others (8:1-2), however, they had contributed more, and some may have felt that they were contributing an inordinate percentage of the collection. Paul employs a common argument for why they should continue what they have begun: many ancient arguments were weighed by a principle here translated "advantage" (NASB) or "what is best" (NIV) (see, e.g., 1 Cor 6:12); Paul explains the advantage in 8:13-15. The *Old Testament normally described gifts and sacrifices as "acceptable" only if they reflected the best one had to give (e.g., Lev 1–4). It was widely understood, however, that one could give only according to what one had (e.g., Tobit 4:8, 16; Sirach 14:13; Mishnah *Pe'ah* 7:8; Dionysius of Halicarnassus, *Antiquities of Rome* 11.27.7).

8:13. The Corinthian Christians may have resented having to provide a large portion of the offering, but Corinth was a prosperous city. One common definition of friendship was that "friends share all things in common" and are

"equal" (including in some *Diaspora Judaism; *Letter of Aristeas* 228, 257, 263, 282), even though this principle came to be applied even to wealthy *patrons who sponsored poorer *clients. Ancient speakers and writers stressed "equality" as much as "concord" (see comment on 5:18-19), and the Corinthians could not miss Paul's point: their conversion made them "friends" to other Christians and required a more equitable distribution of provision within Christ's body.

8:14. A famine was an emergency (Acts 11:28). Jewish wisdom writers exhorted their readers to remember famine when they were prospering (Sirach 18:25). Benefaction in antiquity involved reciprocity (often honor is what benefactors achieved in return). Although Corinth was extremely prosperous and the Christians there might not envision their own poverty, Paul encouraged them that if *they* were ever in need, someone else would supply their need. God always supplies enough to the whole body of Christ, but it is up to Christians to make sure that the "enough" is adequately distributed.

8:15. In case 8:14 sounded too good to be true, Paul introduces the principle of God's provision by way of the manna in the wilderness: God meant everyone to have just what they needed, no more and no less (Ex 16:18). (Other writers, such as *Philo and *Josephus, taught equality from this Exodus passage.)

8:16-24
Envoys for the Collection

8:16-18. Here Paul provides a letter of recommendation (3:1) for Titus and his companion. Using the ancient technique of literary bracketing, Paul might bracket 8:16–9:15 with thanksgiving.

8:19. Just as *synagogues throughout the Mediterranean would send their annual tribute to the Jerusalem temple via local representatives of high reputation (Philo, *Special Laws* 1.78; cf. Mishnah *Sheqalim* 3:2), this offering is also to be administered in an irreproachable manner: envoys would be "appointed by the churches." The term for "appoint" often involved elections, as was common in Greek administration. Ancients expected generosity to be repaid with honor—here (and in 8:21, 23) to the chief benefactor, God.

8:20-21. In a culture obsessed with shame and honor, Greco-Roman writers were quick to emphasize that leaders and other beneficiaries of the public trust must be open and of irreproachable moral credentials. Judaism also stressed that charity collectors must act irreproachably to prevent even false accusations. Verse 21 echoes the *Septuagint of Proverbs 3:4 and the proverbial saying that grew out of it. Jewish teachers stressed doing what was good in the sight of both God and people. The term in 8:21 translated "intend" (NRSV), "providing for" (KJV) or "have regard" (NASB) applied in inscriptions to benefactors' foresight; sometimes this involved sending honorable representatives.

8:22. Both Jewish and Greco-Roman moralists recommended that potential leaders be "tested" in lower positions before achieving public office. This brother (distinct from the one mentioned in 8:18) had already been proved in ministry; sometimes one could use an epithet instead of a name if a person were well-known (*Rhetorica ad Herennium* 4.31.42). Messengers usually traveled at least in pairs; sensitive matters could merit a larger delegation (see 8:23).

8:23-24. As "delegates" (literally "apostles") of the churches, they were commissioned representatives of those churches. As such, they were like the representatives of local Jewish communities who would band together and travel to Jerusalem to deliver the temple tax each year. Titus is Paul's representative in the group. Thus they are to be received hospitably, as hospitably as Paul and the other *churches would have been received. Throughout the ancient Mediterranean envoys were to be respected and received with honor. On "boasting," see comment on 7:14. Displaying affection, one could ask for proofs of love (e.g., Fronto, *Epistulae Graecae* 6; *Ad M. Caesarem*, 3.2.) One could invite a benefactor to demonstrate to the recommended how effective the recommender's recommendation was (e.g., *Cicero, *Letters to Friends* 3.1.3; 13.19.3, 20.1, 26.4). Asking a reader to prove their affection for the writer by granting the latter's request revealed confidence in the friendship (Cicero, *Letters to Atticus* 12.18). Calling one the "glory" of something could mean that one brought honor to it (Fronto, *Ad M. Caesarem* 2.3.2; 2.7; 5.3).

9:1-5
Boasting in Advance

In 9:1-5, Paul employs here the *rhetorical techniques of endearment (by boasting about them) and comparison. The terms translated "undertaking" (9:4, NRSV), "blessing" (often translated "gift," 9:5) and even "case" ("matter," "part," 9:3) appear in ancient documents referring to financial matters.

9:1. Against those who think that 9:1 is disconnected from the preceding context, the first three words of 9:1 usually refer to preceding context; 9:1-2 may be a *digression (a common ancient literary form) between 8:16-23 and 9:3-5, which involve the delegation.

9:2. Citizens' first loyalties were to their cities, and bitter rivalries often arose between cities. Paul appeals to their civic pride to make sure that the well-to-do Corinthians do their part. Corinth was the capital of the province of Achaia, south of the province of Macedonia (which included Philippi and Thessalonica).

9:3-4. By boasting about the Corinthians (possibly before the rise of recent conflicts with them), Paul has laid his honor on the line. If chapters 10–13 are part of the same letter, Paul may have some reason to worry (despite politely expressing confidence, 9:1; cf. especially 12:16-18)! Similarly, *Cicero can assure a benefactor of the requester's confidence, but simultaneously urge him not to disappoint that confidence (*Letters to Friends* 3.1.3).

9:5. Inscriptions show that the public held benefactors to their promises. Paul acts from "necessity," a commonly cited reason for actions (e.g., Hermogenes, *On Issues* 77.6-19).

9:6-15
Sowing and Reaping

Jewish tradition recognized that God rewards the generous (Prov 11:24-26; 22:9).

9:6. Reaping what one had sown reflects an ancient proverb, related to many other agricultural images prevalent in antiquity (cf., e.g., Job 4:8; Prov 11:18; 22:8; Hos 8:7; 10:12; Sirach 7:3; *Cicero; *Aristotle); the specific image of sowing and consequently reaping sparingly seems to have also been in general circulation. Using a familiar rhetorical device (*symploche*), Paul structures the principle with repetition (x . . . y/x . . . y).

9:7. Paul here cites standard Jewish wisdom; willingness may evoke Exodus 25:2, 35:5, 21-22 (cf. 1 Chron 29:6-9; Ezra 2:68), suggesting that Paul had a fairly developed theology of giving based on the *Old Testament. "Not reluctantly" (NRSV) echoes Deuteronomy 15:10 in the *Septuagint. "God loves a cheerful giver" is from an addition to Proverbs 22:8 in the Septuagint ("God blesses a cheerful and giving person"; cf. Sirach 35:11). The term rendered "cheerful" often applied in Jewish texts to gifts for the poor.

9:8. Greeks appreciated repetition of sounds; Paul here uses seven words beginning with *p,* including using "all" five times (three of them in succession). Philosophers applied the term translated "sufficiency" (KJV, NASB; "enough," NRSV) to the sage's contentment in all circumstances (e.g., *Epictetus, *Diatribes* 1.1.27); others also appreciated this virtue (e.g., Prov 30:8 LXX; **Psalms of Solomon* 5:16). Although some Greek traditions emphasized that one could be self-sufficient without anything to live on, most Greek thinkers would have agreed with Paul that basic needs had to be met before a person could be self-sufficient. For views on possessions and wealth in antiquity, see comment on 1 Timothy 6:3-10. Ancient business documents often used the term here often translated "abundance" (8:2, 7, 14; 9:8, 12), applying it to profit margins.

9:9. This quotation from Psalm 112:9 refers in the context of that psalm to the behavior of a righteous person; thus Paul may be saying in 9:8-9 that their reward for sowing seed (giving money) to the poor is that their righteousness will stand forever.

9:10. Because the Corinthians are to be righteous "sowers" ("scattering" seed—v. 9), Paul cites Isaiah 55:10: "He who provides seed for the sower and bread for food," which proves that God (the supreme benefactor) will continue to supply them so they can continue to give and hence have a greater reward of righteousness (v. 9). Paul uses the second text (Is 55:10) to apply the first text (Ps 112:9, cited in 9:9) to their situation; linking together texts with a similar key word or concept was a common practice in Jewish interpretation. God provides enough overall and then invites those with abundance to share with those in need (Deut 15:4-11).

9:11-15. In Greco-Roman antiquity, recipients of gifts were expected to reciprocate by publicly honoring the benefactor. Jewish people believed that God heard the cries of the poor (Deut 15:9-10); Paul's readers would understand his point that their aid to the poor brought direct honor to God in praise (2 Cor 9:11-12; cf. 1:11) and would also benefit the Corinthians through the prayers of the poor in Jerusalem (9:14). (God's "gift"—v. 15—may thus include his strategic provision to the Corinthians by which they can benefit the poor of Jerusalem.) The term translated "service" (NASB) or "ministry" (NRSV) in 9:12 can apply to priestly service, but also applied to yearlong roles as public benefactors (frequently assigned to the wealthy, sometimes as an involuntary obligation, but Paul insists on voluntary contributions, 9:7).

10:1-18
Not Like Paul's Opponents

Paul's change in tone here, from generally cautious affection to often addressing opponents, has led many scholars to believe that chapters 10–13 belong to a separate letter. Others believe that Paul received new information just before penning these words, or that he saved his real *diatribe for the concluding chapters of the letter. Writers could dictate longer letters in stages (e.g., Fronto, *De Feriis Alsiensibus* 4), sometimes added something after receiving news (e.g., *Cicero, *Letters to Friends* 12.12.5), or composed an additional letter for the same traveler to carry (Cicero, *Letters to Atticus* 8.6). But the letter can also be read as a planned unity (see introduction). Defenses usually went on the offensive against opponents and could reserve the most controversial elements until near the end, after establishing rapport.

10:1-2. One sometimes opened a section with the opponent's charge. Paul's harsh letter (2:4; 7:8; letters of hortatory blame were reserved for the severest circumstances) had provoked a hostile reaction among some members of the congregation: ancient *rhetoricians insisted that letters ought to reflect the same personality that the person exhibited when present. Because of love and in order to spare them, Paul had sent a firm letter rather than coming in person (1:23–2:4); but some, who valued forceful speech, mistook his affectionate strategy for weakness (10:9-11). In most contexts envisioned by his critics, "meekness" was considered base, weak and low status (cf. 1 Cor 2:3); yet Paul knew that people respected a "meek" ruler, that is, a merciful and benevolent one. Christ's "meekness and gentleness" probably alludes to Jesus' saying later recorded in Matthew 11:29—a good reply to the Corinthians' complaint.

10:3-5. Far from being weak (10:1-2), Paul wages war. Greek sages sometimes described their battle against false ideas as a war, in terms similar to those Paul uses here (e.g., *Seneca, *Epistle to Lucilius* 109.8-9;117.7, 25; Diogenes, *Epistles* 10; Diogenes Laertius 6.1.13; *Philo, *Abel* 130; *Conf.* 129-33). Like those sages, Paul claims to be doing battle with false ideas. (Orators also employed such images; e.g., *Cicero, *On the Orator* 3.14.55; *Brutus* 2.7; *Letters to Friends* 4.7.2; *Tacitus, *Dialogue on Oratory* 32, 34, 37.) "Arguments" (NIV, NRSV, GNT) or "speculations" (NASB) is a technical term for rhetorical or philosophical reasonings; the prisoners of war in this extended metaphor are human thoughts. Cf. Proverbs 21:22.

10:6. Sieges, hence siege imagery, were common (e.g., Prov 21:22; 1 Maccabees 8:10). Rulers generally executed vengeance on those who had rebelled against them after the war was finished (e.g., 2 Sam 12:31). Paul may mean that the believers must work harder to make up for time lost through disobedience.

10:7. The Corinthians' preoccupation with outward appearances matched that of sophists concerned with proper and persuasive speech, but true philosophers constantly ridiculed this attitude (4:16-18). The more well-to-do members of the Corinthian *church were enamored with Greek philosophy; Paul thus rebukes them on their own terms here.

10:8. Some wealthier Corinthians assail Paul for not conforming to their cultural standards (i.e., for working as an artisan although he is a moral teacher). *Old Testament prophets were called both to build up and to tear down (e.g., Jer 1:10), but Paul is called only to build up the Corinthians (2 Cor 12:19; 13:10).

10:9-10. A basic rule of ancient letter writing was that one's letters should be appropriate to one's personality when present, because letters in some sense communicated one's presence. Philosophers who failed to be

consistent in this manner were typically attacked verbally.

Paul's (literally) "bodily presence" (KJV, NRSV) was unimpressive; socially respectable speakers were strong in their appearance, gestures and intonation, as well as having the right Greek accent (e.g., Dionysius of Halicarnassus, *Demosthenes* 54; *Arrangement of Words* 11; Cicero, *Brutus* 55.203; 91.316; *Plutarch, *Demosthenes* 7.2-3; 11.1-2; *Cicero* 4.3). Unfortunately, Paul was a better writer than public speaker.

10:11. Philosophers and Jewish teachers often contrasted words and deeds; deeds weighed more heavily. Even if Paul was an inferior speaker, his life backed up everything he said.

10:12. Paul's "some" may follow the ancient literary practice of obscuring opponents with anonymity. "Comparison" was a standard rhetorical and literary technique; here Paul mocks his opponents: they are so foolish that they do not realize that one cannot compare oneself with oneself. Higher-class *patrons would usually write letters of recommendation for socially inferior *clients, but sometimes people were forced to commend themselves; self-commendation was to be accepted only if done discreetly, but Paul paints his opponents as pretentious—a vice in Greek culture.

Paul satirically declines to compare himself with such teachers—satire was a common argumentative device. One of the rules of "comparison" was that one could not compare dissimilar items; yet the dissimilarity turns out to favor him in 10:13-18.

10:13-16. Teachers of rhetoric and philosophy in cities throughout the Mediterranean competed for students and their fees. One means of self-advertisement was to compare oneself favorably to rival teachers; Paul uses the ancient literary device of irony and turns his opponents' advertising on its head, refuting them while satirizing their very form of boasting. Ancients despised boasting beyond one's appropriate class, but in the matter of the Corinthians, Paul plainly outclasses his critics (cf. 3:1-2). Ancients often considered as hubris failure to "know oneself," including one's limits as a mortal.

10:17. On Jeremiah 9:23-24 see comment on 1 Corinthians 1:26-31.

10:18. Applying Jeremiah 9:23-24, Paul notes that self-commendation is obviously out of place—unless, like Paul, one were forced to resort to it by unpleasant circumstances (e.g., to defend oneself). Public speakers used self-commendation but recognized that it was offensive (*Quintilian, *Institutes of Oratory* 11.1.15; Plutarch, *Cicero* 24.1-2; Prov 27:2) unless done carefully and with appropriate reasons.

11:1-15
Countering False Apostles' Boasts

In contrast to Paul, who humbled himself by taking a socially demeaning role (11:7), his opponents have boasted. Paul therefore parodies their boasting with his own brag sheet, following the ancient conventional form of self-praise. At the same time, however, he inverts his opponents' values in the light of the values of God's *kingdom, using another common literary technique called satire (11:16-33).

11:1. Speakers often prefaced shocking statements with warnings (professional *rhetoricians called this practice *prodiorthosis*). In Greek literature "madness" (here, "foolishness") was sometimes a divine punishment for insolent arrogance; philosophers considered the "ignorant" masses insane, and some people considered the most radical philosophers insane. Paul may simply imply that, while he assumes the guise of a madman for rhetorical purposes (being able to assume various styles was part of rhetorical training), it is his opponents who generally boast and hence are truly mad.

11:2. Being jealous over God's people with God's jealousy (cf. Ex 20:5; 34:14) would have been viewed as pious (cf. Num 25:11). Fathers normally pledged their daughters in marriage, and Paul compares the Corinthian *church with a daughter (1 Cor 4:14-15) whom he has pledged in marriage to *Christ (cf. biblical depictions of God marrying Israel or Israel being corrupted, e.g., Is 54:5; 62:4-5; Jer 2:32; 3:1-2; 31:32; Ezek 16:32; Hos 2:19-20; later Jewish depictions of God marrying his son Israel to the *law).

11:3. Fathers had to protect their daughters from men who would prey on them sexually (Deut 22:15-21; Sirach 42:9-12). Some Jewish traditions highlighted Eve being deceived or (unlike Paul) even considered her primarily responsible for Adam's fall (e.g.,

Life of Adam and Eve 25:35; 38:1-2; 44:1-5), but Paul need not allude to such ideas here. In some Jewish traditions, *Satan, disguised as a good angel (cf. 11:14), deceived Eve sexually (*Life of Adam and Eve* 9:1-2; *Apocalypse of Moses* 17:1-2). Given the image of the betrothed virgin (11:2, perhaps betrothed to Christ, the new Adam), Paul could have this tradition partly in view here. More certain is the biblical allusion to Genesis 3, where the serpent deceived Eve. Paul presents his opponents as adulterers who corrupt betrothed virgins—a crime punishable by banishment under Roman law and death under *Old Testament law (Deut 22:23-27).

11:4. The Old Testament and later Jewish literature portrayed false prophets as those who claim to have God's *Spirit but are really moved by a different one. Paul offers mock praise of his hearers' acceptance of this bad treatment (cf. also 11:19-20), using the common ancient device of satire.

11:5-6. Rhetoric was important in Greco-Roman society, including in Corinth (see comment on 1 Cor 1:5). By skilled rhetoric a speaker showed that he was educated and truly worthy of being heard by the well-to-do. Philosophers, however, stressed their genuine knowledge rather than others' persuasive speech; Paul appeals to the ideal of knowledge to defend himself. Speakers would sometimes concede a secondary weakness to emphasize a more important strength.

Paul's statement that he is "unskilled in speech" (NASB) need not mean that he is a terrible speaker; even the best speakers played down their oratorical skills to lower audience expectations (e.g., Dio Chrysostom, *Orations* 12.15). He seems to have been accused of inadequate rhetorical skill by others, however; his writings attest a higher level of rhetorical sophistication than possessed by most people of his day, but no matter how hard he worked at it, he did not have the early rhetorical training of an aristocrat, and some elements of delivery would not come to him as naturally as they might to others (see comment on 10:10).

11:7. Refusing a gift often signified refusing friendship, hence choosing enmity (e.g., *Cicero, *Letters to Friends* 14.3.1). Paul claims to be an amateur: sophists not only valued rhetorical skills over one's message (11:6), they also could charge fees (a practice to which Socrates and some other thinkers objected). Teachers were supposed to gain support by a *patron's sponsorship, by charging fees or even by begging, but never by engaging in a working-class job (1 Cor 9:6). Paul's opponents appeal to higher-status Corinthian Christians embarrassed by Paul's labor as an artisan; they, at least, are professional enough to take payment. (Some had likewise charged that Socrates did not accept money because he was not worth any; Xenophon, *Memorabilia* 1.6.12.) Paul may have avoided accepting payment to keep from appearing as a common sophist who is teaching for monetary gain or to avoid appearing dependent on them as a *client; he was not their employee (see comment on 1 Cor 9:15-27). Except when they meant it as kindness, Greeks saw humility as "humiliation" and considered it appropriate only to those of very low status. Paul's question is sarcastic; their culture demanded honor and gratitude for benefactors who gave services freely.

11:8. Paul *embraces* low status: he became the Corinthians' servant (contrast whom his opponents serve—11:15). Accepting wages from one employer while genuinely working only for another was naturally viewed as dishonest; robbery was naturally considered even lower status than manual labor! (The term could also be used for "plundering" a defeated enemy's spoils after a military campaign.)

11:9. Patrons could view clients, their social dependents, as "burdens." Sometimes teachers were clients of wealthy patrons, but Paul is not dependent on, hence not a client of, the Corinthian church. Thus he need not answer to them.

11:10-12. Boasting was considered acceptable if it was for someone else's sake and not simply for one's own. For example, *Plutarch permitted self-praise if it was mixed with praise of one's audience; one could also use it to remove others' excuses for failing to heed one (Isocrates, *To Nicocles* 47). As in 11:11, writers sometimes reminded readers of their love (cf. 7:3; Cicero, *Letters to Friends* 2.4.2).

11:13-15. In some Jewish traditions Satan disguised himself as an angel or in other ways (e.g., as a beautiful woman to some *rabbis or as a beggar to Job's wife; for one tradition regarding Satan and Eve, see comment on 11:3);

Judaism regarded Satan as a deceiver. Although Isaiah 14 and Ezekiel 28 do not in context refer specifically to Satan (against a common view today), a large body of Jewish tradition taught that Satan and other evil spirits were originally angels who had fallen in Genesis 6:1-3.

11:16-21
Paul's Apology for Boasting

If his critics have denigrated him as ignorant (11:6; cf. 10:10), he can justifiably adopt, for *rhetorical purposes, the alleged role of fool (speaking in the role of another was a familiar rhetorical device, *prosopopoiia*). Implicitly, however, he attacks his opponents' boasting as foolish (returning charges against opponents was conventional rhetoric). Paul's way of boasting parodies and thus mocks self-boasting, and therefore a central feature of the Greco-Roman valuing of masculine competition and self-promotion. He walks the tightrope of answering fools as their folly deserves without being truly like them (Prov 26:4-5).

11:16-18. Because appearing to boast was otherwise offensive, speakers had to cite justification for their boasts (see *Plutarch, *Praising Oneself Inoffensively*). Such justifications included refuting criticism (Demosthenes, *On the Crown* 299-300), challenging opponents (Demosthenes, *False Embassy* 174; 2 Cor 11:12), competing against a less fit rival (*Cicero, *Against Caecilius* 12.40), for one's hearers' good (2 Cor 12:19), offering a positive role model and the like. Even autobiographers had to come up with ways to decrease the potential offensiveness of their own claims. Paul, however, boasts in weakness, in contrast to most of his contemporaries. Paul's boastful opponents had apparently laid themselves open to Paul's attack—indicating their own lack of rhetorical skill.

11:19-20. Irony, including mock respect, was a common rhetorical technique. A blow on the face, like spittle, was a grievous insult to one's honor (see comment on Mt 5:39). The ideology of the upper classes (shared by Paul's opponents) held that persons of truly noble character, those suited for freedom, could never tolerate being slaves. Complaints that the hearers were putting up with what was inappropriate implicitly invited hearers to stop doing so (Sallust, *Bellum jugurthinum* 31.11).

11:21. Continuing the irony (11:19-20), Paul confesses his "shame" or "dishonor"—one of the most grievous offenses one could endure in status-conscious society. Confessing what was not an offense was a common rhetorical strategy; so was returning criticisms and depicting the critics as the true exploiters (11:20). Paul uses again the rhetorical technique of "comparison" to mock the boasting self-appointed *apostles who have come to Corinth.

11:22-33
Boasting in Sufferings

Aristocrats typically boasted in their heritage, their accomplishments and so forth; but they did not normally boast in their sufferings. For example, the emperor Augustus boasted at length of his exploits (in his famous *Res Gestae*), though never his setbacks. Some philosophers listed the sufferings they endured as a model for emulation. (In other contexts, lists of sufferings could prove one's devotion to another cause; e.g., generals boasting of what they suffered for the state; in romance novels, lovers recounting what they had suffered for their beloved.) But those who list sufferings to prove endurance do so to boast in their strength, not in their weakness. For Paul, if one boasts, one should boast in the values of the *kingdom (10:17), humbling oneself for God's honor.

11:22. *Rhetoric often used point-by-point comparisons of virtues and other matters (11:22-23; cf. e.g., Menander Rhetor 2.3, 381.31-32; 386.10-13; 2.10, 416.2-4; 417.5-9); as is the case here, elements in such comparisons could even include homeland (2.3, 379.6-8). Matching critics in sets of three claims (including home city, *Josephus, *Life* 198), or posing and responding to three rhetorical questions (Cicero, *For Sextus Roscius of Ameria* 1.2), was good rhetoric. Even in Greco-Roman Corinth, the church recognized its Jewish roots; and traveling Jewish Christians, especially those with Palestinian roots, could claim authority in a tradition earlier than Paul. (This "Are they . . . ? So am I" reasoning seems to have been persuasive in antiquity; cf., e.g., Josephus, *Life* 40, 199.) "Israelites" and "descendants of Abraham" refer in the parlance of

ancient Judaism to anyone Jewish; "Hebrews" probably means the same thing (rhetoric valued repetition with synonyms), although it might apply especially to Palestinian Jews (see comment on Phil 3:5).

11:23. Paul's comparison escalates from his equality (11:22) to his superiority (11:23). The term translated "servants" here may be a term of respect ("ministers"—KJV, NRSV); if it means "slaves of Christ" in this case, they are high-status slaves (see comment on Rom 1:1). On "insane" (NASB), see comment on 11:1; when reducing an opponent's argument to the absurd, one could acknowledge the parody as "insane" (Aelius Aristides, *Defense of Oratory* 339, §112D). Paul begins by boasting in the very cause of the Corinthians' reproach: his low-status "labors" (see comment on 11:7). Imprisonment was typically a matter of shame. Some philosophers boasted in ignoring beatings; Jewish people praised those beaten and martyred for their faith.

11:24. People sometimes enumerated accomplishments, as in 11:24-25; for example, the emperor Augustus, boasting of his exploits, numbered some of them, such as three gladiatorial games he sponsored for the Roman people (*Res Gestae* 22.1). Under Jewish *law, some sins (like sabbath violation or being a false prophet) merited stoning (because the Jewish people could not legally enforce this penalty in this period due to Roman restrictions, they usually just excluded capital offenders from the community). Other, lesser sins required only a beating of thirty-nine lashes with a whip (Deut 25:2-3); a *synagogue court decided such cases, and the synagogue attendant administered the beating. As in the case of violations of festivals or ritual laws, this penalty was administered only after the person had been warned and yet persisted in the offending behavior. Within reason, Romans allowed Jews to execute nonlethal discipline in their own community; Paul could have escaped such discipline had he renounced connection with his people, but clearly he proved unwilling to do so.

11:25. Roman citizens were not supposed to be beaten with rods, but ancient reports demonstrate that officials sometimes overlooked these rules (see comment on Acts 16:22). On Paul's stoning see Acts 14:19. Frequent travelers were also well aware of the danger of shipwrecks, and death at sea was the most frightful form of death in antiquity (partly due to the pagan belief that the spirits of those who died at sea roamed forever because they were not properly buried). Because there were no lifeboats per se (see comment on Acts 27:30) or life jackets, shipwrecked victims could spend a long time in the water and often did not survive. To ancient hearers, surviving multiple times could suggest divine protection.

11:26. Expanding on "frequent travels," Paul uses the rhetorical device *anaphora* (repeating an opening word or phrase) with the eightfold, "in dangers from." Travel was one of the more dangerous activities in antiquity; a later Jewish tradition even speaks of priests' praying and fasting two days a week for travelers' safety. Rivers were often used to navigate inland from the coast to cities; more likely, Paul could refer here to the danger of crossing swollen rivers or how they flooded nearby roads, especially in winter and early spring. Robbers were one of the most dreaded dangers of land travel and one reason many parties did not travel at night. Pirates had become much less common on the sea than in earlier times but remained a potential danger; more generally, mercantile Corinth knew well the perils of sea travel. The climax of Paul's "dangers," however, is probably ironically pointed at his opponents: "perils among false brethren" (KJV).

11:27. Sleeplessness could stem from difficult sleeping conditions during travel, potentially dangerous night travel, or nocturnal ministry (Acts 20:31; though that would be limited at night because most people were asleep); insomnia is possible (though likelier at 11:28-29). One traveling to the interior of Asia Minor would face "cold"; particularly coupled with "nakedness" (sometimes used, as here, to mean inadequate clothing), this was a serious hardship.

11:28. Paul's "anxiety" (NRSV; the same term translated "worry" in Mt 6:34) over the state of God's people is motivated by love (11:29-30), as the *Old Testament prophets' concern for Israel had been. Philosophers emphasized that one should never be anxious (also Phil 4:6), but Paul's anxiety is one of love, not a selfish kind (2 Cor 2:13; 7:5-6; 1 Cor 7:32—same word; 1 Thess 3:5).

11:29-31. Paul's identifying with the "weak" would again offend the socially powerful leaders in the Corinthian church, who would view it as a sign of low status. To boast in his weakness inverts his opponents' position. It was honorable, though, to share others' sufferings (Cicero, *Letters to Friends* 14.3.1; *Seneca, *Natural Questions* 4.pref. 15).

11:32. Paul supplements the list with a humiliating example. Aretas IV controlled Nabataea, including many Nabatean Arabs in the region around Syrian Damascus. Some argue that he may have controlled Damascus itself about A.D. 34–39 (he died about 39–40), but it is sufficient here to think of his ethnarch as the representative of the significant Nabatean community in Damascus. Damascus had a Nabatean quarter, and the Nabatean community in Damascus had its own rights. (Similarly, though Jews were usually treated as resident aliens, the community leaders who spoke for them might wield significant local influence.) If Aretas did not actually control Damascus, he certainly wielded political influence beyond his immediate sphere of legal jurisdiction. Because most of the caravan trade from the east passed through his kingdom, it was the strongest and wealthiest of the minor kingdoms of the Near East.

11:33. The "window" Paul mentions would have belonged to a house built along the city wall; many houses were built on such walls. Windows were sometimes large enough to fit through, but generally too high for intruders to climb into; a window in a house on the wall would be high enough to be dangerous if something went wrong. Paul's strategy was borrowed from the Old Testament (Josh 2:15; cf. 1 Sam 19:12). Acts 9:25 mentions this escape. This was hardly the sort of heroism in which high-status people would boast, because they did not value being in trouble with the authorities, even for the cause of Christ. Some commentators contrast a particular prize for heroism in the Roman army, for the first soldier to scale an enemy wall; here Paul instead escapes from a wall secretly.

12:1-10
Revelations and Weakness

12:1. Ancient Mediterranean culture viewed boasting negatively, unless it could be justified by particular reasons, one of which was "necessity." Like many *Old Testament prophets, Paul experienced visions and revelations. Some Jewish writers of Paul's day diligently cultivated visionary experiences with fasting and sleep deprivation, but Paul, however, was simply "caught up" (v. 2; see comment on Rev 4:2).

12:2-4. "Fourteen years ago" was perhaps a decade after Paul's conversion. Because later Jewish teachers sometimes used "that person" as "you" or "I," it is possible that Paul here relates his own experience in the third person to avoid boasting. Some Greek writers suggested that one should describe one's experience as another's if one were ashamed to speak of it openly; analogously, some Jewish *apocalyptists may have transferred their own visions to those heroes of the past in whose name they composed their writings. Willing to boast only in his weaknesses, Paul will not accept any praise for his personal revelations (cf. Prov 27:2).

Greek writers spoke of ascents of the soul, especially after death, as did Jewish mystics and apocalyptists. Jewish visionaries sometimes described their mystical experiences of heaven as being "caught up"; although they could mean that only their souls saw heaven (e.g., **1 Enoch* 71:1-6), the experience was sometimes so vivid that the whole person seemed to be caught up (Ezek 2:2; 3:14, 24; 8:3; 11:1, 24), and some texts explicitly included the body in this experience (as in *1 Enoch* 39:3). (The Jewish ascent stories sometimes emphasized the danger of the ascent, as in the case of the four *rabbis, only one of whom reportedly escaped unscathed [cf. Tosefta *Hagigah* 2:3-4]. But except for *Philo, all the Jewish stories are either pseudonymous or later than Paul, so it is difficult to reconstruct the exact nature of Jewish mystical experience in Paul's day.)

Visions given by God are not the same as the practice of some Greek sorcerers and wonderworkers and spiritist experiences in many cultures today, where the soul could travel abroad in astral projections; even Philo, the Jewish philosopher most influenced by Greek thought, saw ecstasy as the soul's experience with *God,* not simply wandering around on the earth.

In Jewish texts, "paradise," the new Eden that was the opposite of hell (*Gehenna), would exist on earth in the world to come but

was reserved in the heavens in the present time. Different texts varied in the number of heavens they envisioned (from 3 to 365); three and seven were the most common numbers, and paradise was often thought to be located in one of these heavens. Paul's "third heaven" probably means he thought in terms of three heavens, with paradise in the highest. (The lower atmosphere was usually regarded as the lowest "heaven.") Many Greek readers thought that the pure soul would ascend to the highest heaven at death, so the Corinthian Christians would have no problem understanding Paul's words here.

Revelations of deities in the Greek *mystery cults were also "forbidden to be uttered"; some Jewish writers like *Josephus and *Philo applied this description to God's highest wisdom or to the divine name.

12:5-6. One common *rhetorical device was to say, "I could say this, but I won't" (cf. also in Philem 19). To avoid boasting, one could also appeal to what others see in one.

12:7-8. "Flesh" here need not indicate a physical ailment (like the one in Gal 4:13), as is often supposed (so GNT); Paul may allude to the "thorn in Israel's side," the Canaanites God left in the land to keep Israel from exalting themselves (Num 33:55; Judg 2:3; cf. Josh 23:13; Ezek 28:24). Scholars debate exactly what Paul's "thorn" was, but in view of the context and Paul's "buffeting" (KJV, NASB) in this verse (cf. 1 Cor 4:11), it may be continuing persecutions; or this "messenger of Satan" might be an ironic insult against his opponents themselves (11:14-15). As in the Old Testament (e.g., Job 1:6–2:6) and most Jewish thought, God is here sovereign even over Satan and his angels.

12:8-10. Philosophers spoke of self-sufficiency, but Paul emphasizes the sufficiency of God's *grace. Miracle reports in pagan temples sometimes followed the same form as Paul's request (v. 8) but concluded with the deity's appearing to heal the person. Although Paul had performed many miracles (12:12), he boasts in his weakness.

12:11-18
Paul's Closing Irony

12:11. Many ancient writers advised that one could praise oneself inoffensively only if one were compelled to praise oneself, especially to defend oneself (cf. e.g., *Cicero, *Letters to Friends* 5.12.8). Calling himself a "nobody" now rejects boasting.

12:12. "Signs and wonders" were miracles (e.g., Deut 6:22; 7:19). Appealing to readers' own eyewitness knowledge was one way of deflecting some of the offensiveness of self-boasting (so, e.g., the earlier Greek rhetorician Isocrates).

12:13. The well-to-do in the Corinthian *church want an *apostle they can be proud of—one who conforms to their high-society expectations for a professional moral teacher. Thus they want Paul to stop working and to accept support from them, to become their *client or dependent (see 1 Cor 9). Paul avoids playing into the hands of the well-to-do faction of the church (see the situation in the introduction to 1 Corinthians) by accepting support from others instead; here he replies in irony: "Forgive me!"

12:14-15. The well-to-do Corinthians want Paul to be their client and they his *patrons (12:13), but Paul reminds them that he is their father (1 Cor 4:15). Thus he reverses their own position: he refused their support not because he was socially ignorant, but because they were his dependents rather than his being their dependent. (Once a Roman father declared a child to be his, parents supported the child growing up and helped young couples establish themselves. Clients and children were both viewed as dependents in the Roman household.) It was appropriate to honor benefactors but not to pay them.

12:16-18. Speakers sometimes challenged their detractors to prove any wrongdoing on the speakers' part (e.g., 1 Sam 12:3-5; *Cicero, *Pro Sestio* 21.47). The same people who criticize Paul for not accepting their support—so their faith could appear more respectable to their social peers—also apparently accept his opponents' arguments against his offering for the poor in Jerusalem (chaps. 8–9). Occurring this close to the end of Paul's argument, his request for funds for the poor may have been at the center of his opponents' accusations against him: this Paul would not accept your support when it was socially appropriate, but now he wants money to help others you do not know!

12:19–13:4
Paul's Coming to Discipline

Paul, who had been "weak" among them before, would now be strong (13:3).

12:19. An "apology," or defense speech, was a standard type of writing, but Paul explains his ironic defense and display of *rhetoric as motivated only by love for the Corinthians, rather than a genuine defense of himself.

12:20. One standard theme of Greco-Roman moralists was "harmony"; they commonly attacked strife, envy and so forth. Ancient moralists also attacked anger, among other attitudes. The Corinthians cannot defend their behavior even on the basis of their own culture's ethics.

12:21. If the powerful members of the Corinthian church despised Paul's humility (11:7), their wretched spiritual state (12:20) is about to humiliate him further. So much for his boasting of them (9:3)!

13:1-2. Moses' *law (Deut 17:6; 19:15) and all subsequent Jewish (and Christian—Mt 18:16; 1 Tim 5:19) law required a minimum of two witnesses in the case of a charge against someone. Paul is treating his next visit to Corinth as a courtroom battle (cf. 1 Cor 6:3-4).

13:3-4. Because Judaism talked of God speaking by the prophets, Paul's appeal to "Christ speaking in" him is probably an appeal to his prophetic gift. Because the Corinthian Christians, like their surrounding culture, valued rhetorical power that drew attention to speakers rather than to the supreme God, Paul often drives home God's power revealed in the weakness of the cross to the Corinthians (1 Cor 1:18–2:8).

13:5-10
True Power and Weakness

13:5-6. Corinthian culture evaluated speakers (cf. 13:3); Paul turns the question of evaluation back to them. Many philosophers urged self-evaluation or testing. Paul, their spiritual father, has *Christ in him (13:3-4), but the Corinthians must decide whether Christ is in them.

13:7-9. Philosophers generally reasoned that it did not matter what others thought of them; but many reasoned that they should guard what others thought of them, not for their own sake but for the sake of bringing others to philosophy. Paul is unconcerned with what others think of him but wants his friends to be built up.

13:10. On Paul's authority in this regard, see comment on 10:8.

13:11-14
Closing Words

13:11. This closing exhortation to unity fits Greco-Roman "harmony" speeches well enough that even nonbelievers in Corinth would agree with its moral message.

13:12. Very light kisses on the lips were used as a sign of affection among family or friends.

13:13. Letters often included greetings from others present where the writer was.

13:14. Most Jewish people thought of the *Holy Spirit as a prophetic, divine force from God. Thus, for Paul to parallel Jesus, the Father and the Holy Spirit as he does here probably indicates his belief that Jesus is also divine and that the Spirit is also a personal being like the Father and Son.

Galatians

Introduction

Authorship. Virtually all scholars recognize Galatians to be from Paul.

Type of Letter. Formal divisions of letters by type occurred later and categories overlapped, but some consideration is helpful. Although Galatians has apologetic elements (i.e., points where Paul seems to defend himself), Paul is not concentrating on the kind of *rhetoric used in law courts. Rather, the argumentation in Galatians is more like "deliberative rhetoric," the kind of argumentation ancient speakers and writers used to persuade people to change their behavior. The argument itself is very rational, and the emotional language of the letter was standard rhetoric characteristic of stern letters (Galatians includes elements of what later Greco-Roman composition handbooks called "letters of rebuke").

Date. Some scholars have argued for a very early date (making this one of Paul's earliest letters), because Paul does not explicitly appeal to the Jerusalem Council of Acts 15; but that Paul can refer to taking Titus to Jerusalem with him (Gal 2:1) probably suggests that he had already completed his first missionary journey (Acts 13–14) and thus that the Council may have taken place (Acts 15). Galatians may thus date to the latter half of the fifties, probably some time before Romans.

Situation. Paul is clearly battling opponents who have settled in Galatia (for the location, see comment on 1:2; given the likely South Galatian theory for the location of Paul's readers, accepted also by archaeologists of Asia Minor, Acts 13–15 provides especially helpful background for the letter). These are Jewish Christians who would rather circumcise the Galatians—thus alienating them from their own *Gentile culture—than allow Judean Jews back home to think that Christian missionaries were lax (4:29; 5:11; 6:12-13). Unlike Paul, a more seasoned missionary, these missionaries want to impose their own culture on the Galatians.

The Issue. At an earlier time, some Judean Christians had insisted that Phrygian (maybe Galatian; see comment on 1:2) believers be circumcised to be saved (Acts 15:1). Although the Jerusalem Council had apparently settled this issue, side effects lingered: could Gentiles be part of God's people without circumcision? Some of the strictest *Pharisees may have required circumcision for salvation, but many Phar-

isees believed that any Gentiles who kept the few laws given Noah, or followed the levitical requirements for strangers in the land, would be saved. But even for this more lenient class of Pharisees (cf. Acts 15:5), one could not become part of the *people of God* without circumcision; very few Jews were so lenient as to accept Gentiles on such terms. Indeed, circumcision had become a or even the major cultural symbol of fidelity to Judaism: attempts to restrict the practice led to revolts both before and after Paul's time.

Some Judean Christians were now arguing that one must become culturally Jewish to become a full Jesus-follower, fully righteous; after all, the Bible itself made this requirement for one who wished to belong to God's people (Gen 17:10-14). Further, they may have reasoned, if Paul argued for *baptism (a post-Old Testament Jewish addition to circumcision), why could Judean Christians not require circumcision, even though it drove away potential converts? Paul argues forcefully against this view: those who submit to Israel's *Messiah and receive the *Spirit belong to the covenant and already have what circumcision merely symbolized.

Commentaries. Among the useful commentaries on Galatians are those by Donald Guthrie, *Galatians,* NCB (1973; reprint, Grand Rapids: Eerdmans, 1981); F. F. Bruce, *The Epistle to the Galatians,* NIGTC (Grand Rapids: Eerdmans, 1982); Richard N. Longenecker, *Galatians,* WBC 41 (Dallas: Word, 1990); and Douglas J. Moo, *Galatians* (Grand Rapids: Baker Academic, 2013). Helpful specialized works include George Lyons, *Pauline Autobiography: Toward a New Understanding,* SBLDS 73 (Atlanta: Scholars, 1985); Aliou Cissé Niang, *Faith and Freedom in Galatia and Senegal* (Leiden: Brill, 2009). Hans Dieter Betz, *A Commentary on Paul's Letter to the Churches in Galatia,* Hermeneia (Philadelphia: Fortress, 1979), offers helpful insights, although his specific model of judicial (courtroom) rhetoric for the book is questionable (see George Kennedy, *New Testament Interpretation Through Rhetorical Criticism* [Chapel Hill: University of North Carolina Press, 1984]). Some of my primary sources appear in Craig Keener, "The Pillars and the Right Hand of Fellowship in Galatians 2:9," *Journal of Greco-Roman Christianity and Judaism* 7 (2010): 51-58; and Craig Keener, "Three Notes on Figurative Language: Inverted Guilt in Acts 7:55-60, Paul's Figurative Vote in Acts 26:10, Figurative Eyes in Galatians 4:15," *Journal of Greco-Roman Christianity and Judaism* 5 (2008): 41-49.

1:1-5
Introduction

Like many polite ancient letters, Paul's letters characteristically include a thanksgiving at the outset, but Galatians lacks one. In extreme circumstances, a speaker could challenge wrong behavior angrily, especially when the speaker was trusted enough to get away with it; this also fits the way of framing a letter of blame.

1:1. Letters normally opened with the sender's name; less often, they included a description of the sender, where that was necessary. An "*apostle" was a commissioned messenger; although Paul had once been a humanly appointed agent (Acts 9:2), he is one no longer. His opponents may claim authority from Jerusalem (cf. also Judea in general—Acts 15:1). (The status that Jerusalemites had in the eyes of many other Jewish people may be illustrated by the authority others ceded to *Josephus's opponents from Jerusalem in one of his accounts.)

1:2. Writers sometimes included greetings from others as if coauthors even though they may have contributed little beyond greetings (e.g., *Cicero, *Letters to Friends* 16.1.title); here perhaps their inclusion strengthens Paul's authority. Scholars dispute whether Paul here addresses those in North Galatia (a region in Asia Minor settled by Celts, not mentioned in Acts and only slowly Christianized) or more often the South Galatian region (which some scholars call Phrygia-Galatia). If Paul uses the term especially for ethnic Galatians (Celts), he presumably means North Galatia (which includes Ancyra, Tavium and Pessinus). Given his frequent reference to provinces in his letters, it is much more likely that Paul refers to the province of Galatia, like some other ancient writers. In this case, it may instead cover the Phrygian region addressed in Acts 13–14 (including Antioch, Iconium, Lystra and Derbe).

1:3. Paul here adapts standard Jewish greetings; see comment on Romans 1:7.

1:4-5. Jewish people frequently divided history into two main ages: the present age (under the dominion of evil nations) and the future age (when God would rule unchallenged). Because the future *Messiah has already come the first time, Paul can argue that Jesus' followers are already citizens of the future age of God's unchallenged reign.

1:6-9
True and False Gospels

Paul minces no words in these verses; although speeches and letters often opened with praise of the hearers or a polite thanksgiving, Paul begins with a direct rebuke (noticed at least as early as Origen). This literary convention is found only among the harshest of ancient letters.

1:6. Ancient letters, including often harsher letters of blame, sometimes used the expression "I am amazed" (NASB; cf. Demosthenes, *Epistles* 3.11, 23). Paul replaces his usual thanksgiving with this claim.

1:7. Speakers sometimes corrected themselves with a starker claim to reinforce the point. Paul might possibly know more than he says; sometimes critics refused to dignify their enemies by naming them. Messengers who distorted the contents of their message were subject to legal penalties. In the *Old Testament those who distorted the divine message were false prophets (e.g., Jer 23:16), for whom the penalty was death (Deut 13:5; 18:20).

1:8-9. One could repeat a statement for *rhetorical effect. Some Jewish mystics of the period claimed revelations from angels (especially in *apocalyptic literature; e.g., **1 Enoch* 1:2; 74:2; *3 Baruch* 1:8), though Paul might use *hyperbole here. Oaths and curses were familiar in ancient religion, *magic and everyday life. Paul might allude here to the curses of the covenant leveled against those who failed to keep Moses' *law (Deut 27–28); more clearly, this same word for "curse" appears in the *Septuagint of Deuteronomy 13, where false prophets and those who listened to them were to be destroyed.

1:10-17
Not Revealed by People

Argumentative speeches, treatises and other works often included a long *narrative section, normally in chronological order. In a defense, the narrative of events (e.g., *Cicero, *For Quinctius* 3.11–9.33) could precede a statement of the case (10.36) and the proofs (which can include events, but not normally chronologi-

cally; 11.37–27.85). A letter is not a speech, but Paul may draw on conventional argumentative patterns to build his case. Narrative could sometimes be autobiographical, and autobiography could be used apologetically (see, e.g., Josephus, *Life* 336-67). Paul here uses standard themes of ancient autobiography to bolster his argument. Themes in ancient argument included divine attestation, examination of character and behavior, and comparisons between figures personifying different values or sides of the dispute. In deliberative speeches, the speaker first had to demonstrate the integrity of his character and conduct if it were in question.

1:10. Pleasing God rather than people echoes a common theme of philosophers (and of course Scripture; cf. Ex 15:26 LXX; Deut 6:18; 12:8, 25). Many criticized demagogues who flattered the masses. Paul paints his opponents as pleasers of people (6:12-13).

1:11. "I make known to you" or "I would have you know" (NASB) was sometimes used to introduce the narrative portion of a speech. Like philosophers and moralists who presented themselves as models of the virtuous life, Paul can present himself as a model of the *gospel. But anything that could be interpreted as boasting or self-exaltation was offensive to ancient ears, unless one had proper reasons for it; defending oneself or claiming to be boasting on behalf of another (here, God) was, however, considered sufficient reason.

1:12. In argumentation, firsthand knowledge counted highly. Paul refers here to his experience recounted more fully in Acts 9.

1:13-14. "Advancing" (v. 14) is the technical language of philosophical schools for progress in one's studies, but it was also current in *Diaspora Judaism and could naturally be applied, as here, to a student of Jewish teachers. Students often competed (frequently in friendly ways) with fellow students, normally their age peers. The Palestinian Jewish emphasis on "zeal" was commonly rooted in the models of Phinehas (Num 25:11) and the *Maccabees, who were willing to kill for God. "Traditions" could refer to general community customs, but given Paul's Pharisaism (Phil 3:5), it probably refers to Pharisaic traditions, on which Jews discussing Pharisaism generally commented. (*Pharisees were known for their adherence to oral tradition.) Paul thus understands the Palestinian Jewish piety of his day far better than his opponents do. His position and activities are reported in greater detail in Acts 8:1-3 and 9:1-2.

1:15. That God set his servants apart even before birth is clear from Jeremiah 1:5 (see also Gen 25:23; Ps 71:6; Is 44:2; 49:1); Paul presents his own call in the light of those of the *Old Testament prophets.

1:16. "Flesh and blood" (KJV, NASB) was a common figure of speech for mortals, human beings (see "any human being"—NRSV, NIV, NLT).

1:17. "Arabia" refers to Nabatea, the area around Damascus in Syria. This area was prosperous; Greek cities like Petra (Aretas's capital), Gerasa and Philadelphia (modern Amman in Jordan) belonged to the Nabatean Arabs, and Bedouins traveled through the land. Damascus was next to Nabatea; some think that it was controlled during this time by Nabatea's king, Aretas IV, but more likely Nabateans wielded influence because of their numbers (a Nabatean quarter there) and mercantile prosperity (see comment on 2 Cor 11:32). Most Nabateans spoke their own dialect of *Aramaic, although Greek was also known and later (by the early second century) became dominant.

1:18-24
Return to Judea

In 1:11-24 Paul makes clear that he did not receive his gospel as a tradition from the Jerusalem *apostles; he is not, therefore, their subordinate (as a *disciple passing on tradition from his teachers would be). If his opponents claim direct tradition from Jerusalem, Paul can counter their claims by pointing out that he is an equal of the Jerusalem apostles and has his own information firsthand.

1:18-19. On ancient reckoning, where part of the first year counts as the whole, "three" years can mean two. Hospitality was important in Jewish homes. "Peter" (*Petros*) was the Greek translation of *kefa,* *Aramaic for "rock" (not yet used as a personal name).

1:20. Oaths like this one ("before God") could be used in court to underline one's integrity; breaking the oath invited divine judgment, and most people had enough piety to believe that God (or the gods) would execute judgment on one who took such an oath (i.e., called the gods as witnesses) in vain.

1:21. Whether or not Paul means the whole province of "Syria-Cilicia" (as he could have in this period), Paul spent time both in Cilicia (Tarsus) and Syria proper (Antioch, its capital); cf. Acts 9:30, 11:25-26 and 13:1.

1:22. Paul means "*churches of Judea" generally, not Jerusalem; his fluency in the highest and most Hellenized circles of Palestinian Jewish education (evident from 1:14 and Paul's *rhetoric) almost certainly places his education in Jerusalem, as Acts 22:3 also suggests.

1:23-24. The few Jewish stories that culminated in the conversion of a persecutor always emphasized the greatness and power of God. Paul's genuine *repentance would naturally produce the same response among Jewish Christians.

2:1-10
The Jerusalem Council

Although the matter is disputable, it seems likely that Paul here reports the relevant features of the Council that Luke records in Acts 15 (some prefer Acts 11:30); the issues addressed in Galatians 2:3-9 correspond to the issues addressed in Acts 15. Paul uses a variety of ancient literary devices to make his point in this passage (e.g., aposiopesis or ellipsis, antithesis). Given the probable claims of his opponents that Paul is relaxing biblical requirements to gain more converts, and that their views emanate from Jerusalem, the Jerusalem apostles' support bolsters Paul's case.

2:1. The "fourteen years" here probably refers to his previous visit to Jerusalem, about three years after his conversion (cf. 1:18); if the Council met around A.D. 48, Paul's conversion may have occurred around A.D. 31, within perhaps a year of Jesus' *resurrection. Because reckoning could include parts of years, however (fourteen could represent as few as twelve), the conversion could possibly be a few years later.

2:2. Paul sought first the support of the Jerusalem leaders for his revelation (cf. 1:12, 16), before the assembly gathered to make a decree. On the importance of majority rulings in ancient Jewish groups emphasizing consensus, see comment on Acts 15:22.

2:3-5. Although many Jews believed that nonidolatrous *Gentiles would be saved, almost no one believed that they were adopted into the covenant on equal terms with Jewish people until they were circumcised. That some Jewish believers wanted to force circumcision on Titus is thus not surprising (cf. Acts 15:5). Paul graphically describes the other side as "spies" (GNT), infiltrators who seek to betray the Christian camp and finally enslave them as prisoners of war. Paul's incomplete sentence (in the Greek of Gal 2:4) may reflect the passion with which he was writing, and which was expected in passionate letters or speeches (for rebuke, forensic intensity or expressing anxiety).

2:6-8. Those of "reputation" (2:2, 6—NASB) are the Jerusalem *apostles (2:9). But Paul regarded God's opinion more highly than any human opinion, no matter how highly reputed. Whenever a Greco-Roman speaker argued against tradition or custom, that speaker had to assume the burden of proof; divine revelations were, however, regarded as important evidence even among Gentiles. Many later Jewish teachers considered the majority opinion of the sages normative, to be weighed more heavily than a direct voice from heaven; but Paul circumvents an appeal to such valued tradition by appealing instead to the standard Jewish doctrine that God is an impartial judge. In 2:7-9, even the "pillars" themselves recognized Paul's equal (but different) task. Ancient sources sometimes report friends disagreeing or even competing.

2:9. Ancient writers often used "pillar" as Paul does here, for prominent or important persons, as in our English idiom, "pillars of the community." Receiving another's right hand usually connoted greetings, welcome or assurance; but sometimes, as here, it indicates an agreement or treaty. "Cephas" is *Aramaic for Peter.

2:10. Palestinian Judaism sometimes called the pious "the poor"; but the literal poverty of the majority of Jewish believers in Jerusalem is more likely in view here. The *Old Testament and Judaism heavily emphasized alms for the poor, and Paul's collection (e.g., 2 Cor 8–9) was undertaken to alleviate this need.

2:11-14
Confrontation in Antioch

Paul extends the *rhetorical technique of comparison (used positively in 2:7-8), contrasting Peter's refusal to comply with the Jerusalem

Council's agreement with Paul's defense of it. The Galatians should thus recognize that even if Paul's opponents had been authorized by the Jerusalem apostles—which is not the case (2:1-10)—the Jerusalem apostles would have been wrong to have authorized them.

2:11. Jewish tradition, also supported by Jesus, warned that one should initially reprove a person privately to avoid causing undue shame or loss of face; Paul thus treats this situation as an extreme case. Antioch was the largest city of Syria-Palestine, over three hundred miles north of Jerusalem, and the center of the Jewish Christian mission to the *Gentiles (Acts 11:20; 13:1-3; 14:26-27).

2:12. Pious Jews were not supposed to engage in table fellowship with Gentiles (Acts 10:28; 11:3). The Jerusalem Jewish leaders may have agreed with Paul in theory, but they also had to keep peace within their own Jerusalem constituency and maintain their witness to their culture, with its recently rising anti-Gentile sentiments. Peter probably saw his actions here the way Paul saw his own in 1 Corinthians 9:19-22—appealing to everyone—but Paul would have seen the qualitative difference as enormous: withdrawing from table fellowship with culturally different Christians made them second-class citizens, violated the unity of the *church and hence insulted the cross of Christ. Although Peter and others undoubtedly claimed to oppose ethnocentrism, they accommodated it on what they saw as minor points to keep peace, whereas Paul felt that any degree of ethnic separatism or segregation challenged the very heart of the *gospel.

2:13-14. Jewish piety demanded that reproof be given in private; for Paul to reprove Peter publicly suggests that he regarded the offense as quite serious and urgent. "Hypocrisy" or pretense was universally regarded negatively; philosophers and Jewish wisdom writers alike attacked it.

2:15-21
Paul's Case in Antioch

Paul seems to summarize the substance of Galatians here. (Betz even views this as the thesis statement of the book; it seems long, however, for such a statement.) Paul's response to Peter might continue even as far as through verse 21 (as in NIV), although this is unclear.

2:15-16. Paul argues that Jewish Christians are also made righteous by faith, which does not give them any advantage over *Gentiles who must come to God on the same terms. Jewish people regarded Gentiles as different by nature; later *rabbis taught that Gentiles' ancestors were not freed from the evil impulse at Sinai as Israel was.

2:17-18. Paul then argues—refuting opposing arguments in advance—that righteousness by faith does not lead to sinful living. He uses a *rhetorical objection to make his point, as was standard in ancient *diatribe.

2:19-20. The *law itself taught Paul the way of *Christ and Paul's death to sin in Christ. Ancient speakers sometimes used dramatic contrasts—here, both dying and living. The closest parallels to the divine empowerment of Christ's indwelling are *Old Testament teachings about empowerment by God's *Spirit (although the *New Testament writers develop these teachings much further).

2:21. Paul continues his point that righteousness (both before God and in one's behavior) comes through Christ's life in the believer (through the Spirit—3:1-2; cf. 5:13-25). Christ would not have died if salvation could have been provided another way. Jewish people often believed that all Jews were chosen for salvation in Abraham and were saved unless they were very disobedient; by contrast, Gentiles might be saved without conversion to Judaism but could attain to Israel's full status as members of the covenant only if they converted. By insisting that righteousness is through Christ alone, Paul places Jew and Gentile on the same terms with regard to salvation.

3:1-5
Consistency with Their Conversion

In 3:1–4:31, Paul employs an argumentative style popular in his day, with vivid images, *rhetorical questions and intense reasoning. Multiple rhetorical questions can hammer home a point, often challenging the hearer.

3:1. Good public speakers were known for their dramatic gestures and vivid accounts, enacting before their audience the very events they narrated. All major ancient writers on public speaking emphasized this vividness of speech, in which the events narrated seemed to appear before the hearers' "very eyes" (NIV,

GNT). Here Paul may mean that he acted out the crucifixion through his own lifestyle (2:20). Calling someone "foolish" was harsh (cf. 1 Cor 15:36). The term translated "bewitched" refers to the evil impact of spells (see GNT) or the "evil eye," a jealous look with magical efficacy.

3:2. Speakers often used antithesis (contrasting opposites, as in 3:2-3, 5) in forceful argumentation. Some ancient Jewish sources link the *Spirit with human merit: for example, it was said that no one in a given generation could receive the Spirit because the generation was unworthy, even if the potential recipient were worthy. But the Galatian Christians had a different experience; they had received the Spirit shortly after leaving paganism, in keeping with the Christian teaching that the future outpouring of the Spirit on God's people had been made available to all in Christ.

3:3. Although Paul's opponents do not seem to have denied that the Galatians received *Christ and the Spirit before knowing the *law, they insisted that "perfect" (cf. KJV, NASB) or complete Christianity included obedience to the law. Many Jewish teachers believed that the Jewish people had been saved through *grace, but that Jews who rejected the law were lost; in their view, *Gentile converts to Judaism also had to prove the genuineness of their conversion by obeying all the details of the law. Many philosophers and pagan cults spoke of "perfection" or "maturity" as the ultimate stage of moral or (in the case of the cults) religious advancement. Circumcision was done in the "flesh" (6:12-13; Gen 17:11; **Jubilees* 15:26, 33).

3:4. Here Paul asks whether their conversion by grace and consequent persecution were meaningless. An appeal to the readers' own experience would constitute the ultimate eyewitness argument and was rhetorically effective. Sometimes speakers would hold attention by presenting and then correcting a statement.

3:5. Not only their conversion but also the miracles continuing among them were by grace. Although ancient peoples were more open to miracles than modern secularists are, the idea of a religious community (in contrast to a pagan healing shrine of Asclepius) where miracles occurred regularly would have been spectacular even in antiquity.

3:6-14
Abraham's Blessing and the Law's Curse

Paul here refers five times to the *law of Moses and once to the Prophets, making a case from Scripture that those who claimed to respect the law had to accept. He contrasts the message of faith (3:6-9, 14) with works directed toward the law (3:10-13), as in 3:5. (The two major interpretations of this passage are that *Gentile Christians believe as Abraham did—the traditional position, followed here—or that they are saved by Abraham's faith [as in Judaism] and hence Christ's faith, i.e., Abraham's and Christ's fidelity to the covenant.)

3:6. Paul cites Genesis 15:6, a popular Jewish proof text for showing how Abraham modeled the work of faith. For Paul it involves dependence on God's favor rather than counting as meritorious.

3:7. Jewish people (and sometimes others) used "descendants" or "sons" (so NASB here) both literally (genetically) and spiritually (those who acted like their moral predecessors). They normally applied the title "Abraham's offspring" (or "children"—KJV, NIV—or "descendants"—NRSV, GNT) to the Jewish people but occasionally referred specifically to those who excelled in righteousness—although Jewish people would never have applied this designation to Gentiles. Here Paul demonstrates that those who believe as Abraham did are his spiritual offspring (Gen 15:6, quoted in Gal 3:6).

3:8-9. Jewish teachers sometimes spoke of Scripture "speaking." Because Gentiles could believe as Abraham did (3:7), they could also be made righteous as he was. (Jewish teachers saw Abraham as the model convert to Judaism and consequently would be forced to respect Paul's argument more than they would like.) Like a good Jewish expositor, Paul proves his inference from this passage by appealing to another text dealing with the promise to Abraham (Gen 12:3 = 18:18; cf. 17:4-5; 22:18). God's purpose all along had been to reach the Gentiles too, as had been stated at the very opening of the Abraham *narrative. Many Jewish people believed that the righteous (Israel) were chosen and saved in Abraham; here, believing Gentiles are saved (blessed) in him.

3:10. Both Genesis 12:3 and the blessings of the law in Deuteronomy 28 contrast the curses of those who oppose Abraham or those who break the covenant with the blessings of Abraham's descendants or those who keep the covenant. Reasoning by opposites was a frequent Jewish method of interpretation. Paul thus gives the verdict on righteousness sought by the "works of" (KJV, NASB) or by "obeying" (GNT) the law: imperfect obedience brings a curse (Deut 27:26, the summary of the curses). According to Jewish teaching, human obedience was always imperfect, and God could therefore not require perfect obedience as a condition for salvation; but like a good ancient Jewish teacher would often do, Paul interprets Deuteronomy 27:26 for all that he can get from it—after all, God was in a position to demand perfection.

3:11. Paul quotes Habakkuk 2:4 (on which see comment on Rom 1:17) as evidence that a righteousness based merely on human obedience is inadequate. (Some of Paul's contemporaries understood faith here as law-obedience; 1QpHab 8.1 in the *Dead Sea Scrolls.) Paul's knowledge of the *Old Testament is thorough: he has selected the only two texts in the entire Old Testament that speak of both righteousness and faith together (in v. 6 Gen 15:6; here Hab 2:4).

3:12. Because Habakkuk 2:4 connects righteousness and life, Paul cites another Old Testament text that refers to both, again demonstrating his Jewish exegetical skill (Jewish interpreters regularly linked texts on the basis of key words they shared). Paul contrasts the faith approach (3:11) with the works method of Leviticus 18:5 (cf. Ex 20:12, 20; Lev 25:18; Deut 4:1, 40; 5:33; 8:1; 30:16, 20; 32:47; Neh 9:29; Ezek 20:11, 13; 33:19). Although these Old Testament texts speak of long life in the Promised Land, Paul knows that many Jewish interpreters applied these texts to the life of the world to come (cf., e.g., *Sifra Aharé Mot* par. 8.193.1.10); hence he responds: "This is the works approach." His opponents may have been using this text to make their case that faith was not enough. Paul agrees that the righteousness of the law has to be fulfilled, but he believes that it is fulfilled by being in Christ and living by his Spirit (5:16-25); his opponents believe that a Gentile has to achieve it by obeying the details of the law, especially the initial act of circumcision.

3:13. Again following the Jewish principle of linking Old Testament texts on the basis of key words they shared, Paul cites Deuteronomy 21:23 to show that Christ took the "curse" that belongs to all who fail to perform the whole law (Gal 3:10). Deuteronomy spoke of hanging corpses, but the punishment had long since been applied to living persons being executed.

3:14. In Jewish expectation "the blessing of Abraham" includes the whole world to come; here Paul says that believers have the down payment of that world (cf. Eph 1:3, 13-14) in the blessing of the Spirit (cf. Is 44:3). (For the relationship of the promise of land to the promise of the Spirit, cf. perhaps Hag 2:5 with Ex 12:25; 13:5.)

3:15-20
The Law Does Not Annul Abraham's Covenant

Greeks usually used the term Paul uses for "covenant" for a "testament" or "will" (a legal document opened at someone's death), but the *Septuagint had used this term for "covenant" and Paul expects his audience to be familiar with this biblical usage. Although Paul means "covenant" in the biblical sense rather than as "testament," he can play on the legal nuances of the latter (wordplays were common in ancient argumentation, and Scripture spoke of Israel's "inheritance"). Judaism stressed the covenant made at Sinai, but most Jewish writers saw that same covenant foreshadowed (or, less accurately from an *Old Testament standpoint, actually practiced in advance) in Abraham (Gen 17:9-14).

3:15. Like other legal documents, testaments or "wills" (NRSV) were sealed so they could not be altered. Once a Greek will was sealed, one did not open it to make changes, since this would require breaking the seals (cf. also Roman practice in Pliny, *Epistles* 5.7.1-2). Once the testator died, the will was final. Adoption was also permanent (although even a birth child could be disinherited). One kind of will divided the property immediately, the testator, however, retaining the right to use it until death. When replaced by a subsequent will, the new will might be strongly contested

by the original heirs (e.g., as a forgery or the product of unethical influence). Under Greek law, testaments were confirmed by their deposit with the municipal records office; if a new testament would interfere with an older one, it was rejected. (Under Roman law, a later will nullified an earlier one; Gaius, *Institutes* 2.144.) As in most analogies, one does not press all points; God did not need to die for Israel to receive its promised inheritance.

3:16. Paul means that *Christ is the ultimate seed of the promise through whom the nations will be blessed; this thesis makes good sense of the promise motif in Israel's history. But he argues his case the way the *rabbis often did: by attention to a grammatical peculiarity that was not actually peculiar. (As in English, the Hebrew term for "seed" could convey either the singular or the plural [a collective], which Paul well knew—3:29. But rabbis argued in this manner too; "sons of Israel" meant either "sons and daughters" or only the men, depending on what the rabbis needed it to mean in a given text. Paul's opponents no doubt read Scripture this way, and Paul responds in kind; he takes "seed" as singular, a sense that the term can have in general but that does not seem to fit of the primary sense of most of the most relevant Genesis texts [Gen 13:15-16; 17:8; 22:17-18; 24:7, 60], because he already knows, on other grounds, that Christ is the epitome of Abraham's line. When later rabbis applied "Abraham's seed" to one person, it was naturally to Abraham's son Isaac.) Judaism nearly always took "Abraham's seed" as Israel; Paul would agree that this is usually what it means (Rom 9:7, 29; 11:1). But his argument in Galatians 3:6-9 permits him to apply this expression to *Gentile Christians who are in Christ, hence in Abraham.

Roman law allowed testaments to stipulate that property be left first to one heir and then to another after the first one's death. If Paul expected his readers to know this sort of custom, this might explain how his argument for them can move in principle from Christ as the heir to all who are in Christ.

3:17-18. Many Jewish teachers argued that the *law existed before the creation of the world (though many held that its period of influence in the world started with Moses; some others believed that the patriarchs observed it before it was officially given). On the legal principle of 3:15, God would not institute a law that retracted his earlier promise based on faith. Paul might be responding to an opposing argument that the new covenant could not alter the old; if so, Paul responds that the new covenant (Jer 31:31-34) returns to the *original* covenant. "Four hundred and thirty years" comes from Exodus 12:40. Scripture promised Israel an inheritance, and Jewish tradition spoke often of "inheriting" the coming world (e.g., **1 Enoch* 5:7; **Jubilees* 32:19; **4 Ezra* 7:96).

3:19. The law's function of restraining transgressions would have also made sense to non-Jewish readers: Greco-Roman philosophers felt that law was necessary for the masses but that the wise were a law for themselves. In his image of the guardian in 3:23-25 Paul elaborates on this function of the law, meant to last till the promise could be fulfilled; such an addition could not change the earlier covenant (3:15). According to post-Old Testament Jewish tradition, the law was given through angels (cf. comment on Acts 7:53), and (as in the Old Testament) the mediator was Moses himself.

3:20. Mediators intercede between two (or more) parties; if the law was given through a mediator (3:19), therefore, it was adapted to the needs of both parties. But the promise was not given through a mediator; it was a unilateral enactment of the one God (God's oneness was the most basic belief of Judaism). Paul again argues from analogy in a manner that would be persuasive in his readers' culture.

3:21-29
Before Faith Came

3:21. Jewish teachers said that life did come by the *law, both in this world and in the world to come (cf. 3:12; *Dead Sea Scrolls CD 3.16; **Psalms of Solomon* 14:2-3; **4 Ezra* 7:20-21; Mishnah *Avot* 6:7). But Paul here concludes his argument (3:15-20) that the law was never meant to do the work of the promise.

3:22. In contrast to Romans 3:10-18, Paul has not argued humanity's universal sinfulness from Scripture in Galatians (Gal 3:10-12 at most implies it). Humanity's sinfulness could be safely assumed, however, because Jewish teachers in his day agreed that all people had sinned; Paul simply takes the consequences of

that sin far more seriously than other teachers did, in that the death of God's Son was needed to cancel them.

3:23. Jewish traditions divided human history into various stages (in one tradition, chaos prevailed for two millennia, then the Torah for two millennia, and then the messianic era for two millennia); Paul likewise divides history, viewing the law as a temporary guardian till the original promise was fulfilled.

3:24. A key element in the passage is the term translated "tutor" (NASB) or, better still, "guardian" (NIV, ESV, NLT). The slave assigned to this role would watch out for the student on his way to school and help him with his manners and schoolwork, but he was not the teacher himself. Children sometimes resented but often grew fond of their slave guardians and later freed them. Such guardians were also normally better educated than the free masses; the image is not intrinsically demeaning. But it was hardly the way most other Jewish teachers would have described the law. (They occasionally describe Moses as Israel's "guardian" till Israel grew up. Philosophers spoke of philosophy as a "moral teacher," and Judaism spoke of the law as a "teacher.")

3:25. The coming of faith is described in terms of coming of age, when a boy would achieve adulthood (usually about thirteen or fourteen years old in various Mediterranean cultures).

3:26. Israel was called God's "children" in the *Old Testament and often in Judaism. In contrast to standard Jewish teaching, Paul says here that one becomes a spiritual descendant of Abraham (3:29) and child of God through faith, not through ethnic participation in the covenant.

3:27. Ancient writers sometimes spoke of being spiritually "clothed"; Judaism occasionally spoke of being "clothed" by the *Spirit (see also comments on Rom 13:12; Eph 4:20-24). *Gentiles who wanted to convert to Judaism were baptized. By putting on Christ in converting to Christianity, Gentiles took his status as Abraham's seed (3:16, 29) and God's child (3:26).

3:28. Some Greco-Roman cults claimed to ignore social divisions like those Paul mentions here, although they rarely erased them (most cults were expensive enough to exclude all but the well-to-do; some, however, such as the Eleusinian mysteries, welcomed a range of initiates). But the early Christians were especially distinctive in surmounting such divisions. They formed the only bridge between Jews and Gentiles and had few allies in challenging class (slave versus free) and gender prejudices. (The allies included some philosophic groups, but their views rarely proved widely influential on social mores.) Some Greeks thanked the deity for not making them animals, women or non-Greeks; some Jewish teachers thanked God for not making them Gentiles, women or ignorant people (in some versions, slaves).

3:29. The Jewish people were called "Abraham's seed" (KJV, NIV) or "offspring" (NASB, NRSV; see comment on 3:16), heirs of the promise; Paul's argument in this chapter has transferred this position to all believers.

4:1-11
Sons, Not Slaves

Under ancient law, sons were heirs, destined to inherit what belonged to their fathers; in contrast, slaves were part of the inherited property. The contrast between slaves and children appears elsewhere in ancient literature. But in practice and in household codes, which explained the proper relations of all members of a household with the head of the household, minor children, like slaves, were subordinated; only after leaving the home did a child achieve fullest freedom. Paul here continues the image of the slave guardian versus the child (3:24).

4:1. Under Roman law, the status of the minor still under a guardian was roughly that of a slave (at least regarding property; cf. Sextus Empiricus, *Outlines of Pyrrhonism* 3.211).

4:2. Minors were required to be under legal "guardians" if their father was deceased (e.g., Dio Chrysostom, *Orations* 31.73); this guardian was normally chosen from the father's will, or, if this was unspecified, the role fell to the nearest male relative from the father's side of the family. The "managers" (NASB) or "trustees" (NIV, NRSV) or "stewards" of estates were often slaves or freedmen but wielded considerable power. Heirs under the testator's authority could inherit only at the time specified by the latter (Gaius, *Institutes* 2.87) or at puberty (1.196; later in some places,

Philostratus, *Life of Apollonius* 1.13). In antiquity people considered it unwise to give a minor heir access to the resources prematurely (e.g., *Sifre Deuteronomy* 11.1.2).

4:3. In their previous, pagan state, the Galatians had reverenced the elements of the universe as deities (e.g., wind, fire and other aspects of nature such as the sea; Judaism had long since demythologized them as angels who ruled over nature, like those implied in Ps 148:2-4; cf. **1 Enoch* 20:2; 60:12-22; 66:1-2; **Jubilees* 2:2; *Dead Sea Scrolls 1QM 10.11-12). In late antiquity growing numbers feared the personified, tyrannical power Fate, which was thought to exercise its will through the astral spirits, the gods who ruled the stars. Paul believes that even the Jewish people were enslaved by such evil spiritual powers apart from Christ; see comment on 4:9.

4:4. Jewish texts often speak of the fulfillment of appointed times in history as a way of recognizing God's perfect wisdom in and sovereignty over history (e.g., *Jubilees* 1:26; **4 Ezra* 7:74; *Pseudo-Philo, *Biblical Antiquities* 3:10). (Some commentators have compared "the fullness of the time"—NASB—to how ripe Greco-Roman culture was for the spread of Christianity; some are more reticent, citing the difficult obstacles that this culture presented to the early Christians.) Here Paul compares this fulfillment to the point at which a boy attains maturity and is considered an adult (about thirteen or fourteen years old). "Born under *law" means that Jesus was obligated to keep the law of Moses.

4:5. Greek law combined adoption with heirship; the same seems to have been true in the case of childless persons in ancient Near Eastern law (cf. Gen 15:2). Paul uses common *Old Testament imagery to make his point, however; God had made Israel his children (e.g., Ex 4:22), and the Old Testament repeatedly speaks of the land as Israel's "inheritance," bestowed on them by God (without any thought of God's dying, of course).

4:6. Roman adoptions required a witness of the transaction: the *Holy Spirit performs this function here. That the Spirit should testify is natural, because Judaism understood the Spirit especially as the one who inspired the prophets; the Spirit here inspires believers, speaking to them as he did to the prophets, to remind them of their calling as God's children. "Abba" is the *Aramaic word for "Papa," a term of special intimacy rarely if ever used in Judaism to address God directly, undoubtedly borrowed from Jesus (see comment on Mk 14:36; Rom 8:15).

4:7. The Galatians are now freed from the slave guardian of 3:24-25, for the time has come (4:4).

4:8. Jewish people often said that the pagans did "not know God," and that their gods, which were creations of the true God, were "not gods at all." (Philosophers often decided the moral value of an idea or action by how it corresponded to nature; Paul and other Jewish and Christian writers recognized that worshiping a created object as if it were the Creator failed this criterion. Some pagan thinkers, following an ancient Greek philosopher named Euhemerus, distinguished between real gods, which were evident "by nature" [sun, moon, planets and stars], and those invented by people [other deities].) Jewish people, because they were in covenant with God, said that they "knew" God truly.

4:9. Speakers sometimes deliberately "corrected" themselves to make a stronger point. As was fitting in *rhetorical rebuke, Paul uses harsh language: he is not sure that the Galatians "know" God even now. As in 4:3, the "elemental things" (NASB), "forces" (NIV) or "principles" (ESV, NLT) to which they are returning are presumably the "spirits" (cf. NRSV, GNT) of nature they used to worship as gods (4:8). Foremost among these would be the astral spirits (stars and other celestial bodies), associated with special days and seasonal rituals (4:10; cf. angels of nature and seasons in *1 Enoch* 72:1; 82:10-20). South Galatians were known for their strict and moralistic religion; in addition to Greek imports, Phrygians had indigenous cults, including the mother goddess (contrast perhaps Gal 4:26).

4:10. *Gentiles had unlucky days, special festivals, and so forth. Judaism had its own special calendar of holy days, new moons, sabbatical years and so forth. Paul is saying that by returning to a ceremonial, calendrical religion, the Galatians return to pagan bondage under these spirits in the heavens (4:3, 9). From a technical standpoint, this argument is standard rhetorical exaggeration: Judaism and

paganism felt that they had little in common (including regarding calendars, *Jubilees* 6:35). From the standpoint of experience, however, they would relinquish the *Spirit (3:2; 4:6) for tradition and custom. Some commentators think that Paul here links the deified elements of paganism (4:8-9), which correspond to Judaism's angels of nature, with the angels who gave the law (3:19); although that linkage is uncertain, Paul's image here is negative, at best that of an adult going back under the guardianship of a slave.

4:11. The prophets sometimes complained of pleading with Israel to no avail; disappointed servants of God hoped that their devotion was not "in vain" (so KJV, NASB here), that is, not unrewarded (Ps 73:13; cf. Is 49:4; 65:23); even God's judgments were "in vain" when Israel did not return to him (Jer 2:30). The image was that of great labor expended with no return, due to the recipients' obstinacy (Phil 2:16; cf. 1 Thess 3:5) or the ineffectiveness of a message (1 Cor 15:2, 14, 17, 58).

4:12-20
Paul's Plea

Although Galatians resembles a "letter of blame," it is not the harshest sort of blame; Paul does not intend to break fellowship with his readers. In this section, Paul employs standard themes found in "letters of friendship," emphasizing that he still loves the Galatians deeply. Ancient *rhetoricians emphasized appropriate expressions of emotion as well as logic in persuasion, and recognized the need to lighten the tone after a section of heavy reproof. Often they intensified their arguments by adding intense emotional appeal, especially toward the end of their case. Paul's words here would thus sound entirely appropriate.

4:12. Especially in Greek culture, "friends" (so NRSV here) were viewed as "equals" (although the Roman idea of friendship between *patrons and their dependents was likewise widespread). "I became as you are" means that Paul relates to them as equals, not only as their father in the faith (4:19). Reciprocity was important (cf. 1 Kings 22:4); in ancient ideals, friends shared everything in common, so what belonged to one belonged to the other (e.g., Pliny, *Epistles* 1.4.2-3; 6.30.1).

4:13. Paul's first visit (Acts 14:1-20 as opposed to 14:21-25, if we follow the South Galatian theory; see comment on 1:2) or preaching was occasioned by some "infirmity" (KJV); the term could be applied either to sickness or to injuries inflicted by persecution. *Stoic philosophers said that sickness should not affect one's attitude, and the Galatians may have been impressed with how Paul bore up under an infirmity. Some scholars have suggested (on the likely assumption that South Galatia is in view; see the introduction) that Galatia was a good area for someone sick to go to recuperate.

4:14. Physical infirmities were quite often regarded as the curse or punishment of the gods; this belief in sickness as divine retribution appears often even in Jewish texts. Receiving Paul as God's "angel" (cf. Acts 14:12) meant receiving him with the hospitality due the one who sent him, *Christ Jesus. Messengers were to be received as representatives of their senders. (The wording need not imply that Christ is present as an angel; cf. 1 Sam 29:9; 2 Sam 14:17, 20; 19:27; Zech 12:8. Many second- and third-century Jewish Christians did portray Christ as the chief angel, because of the limited categories available in Judaism to communicate him to their culture. The image was discontinued in the fourth century due to its exploitation by the Arians, who regarded Christ as deity but created, although the image fit earlier use by Ebionites who rejected Christ's divinity. Some Jewish writers, like Philo, portrayed the Word as the supreme angel, but earliest Christianity lacks any direct evidence for this portrayal.)

4:15. Sacrificing one's eye for someone else was a figure of speech for a great sacrifice, attested in various sources. Thus Paul's statement that the Galatians "would have dug out your own eyes to give them to me" need not mean that his infirmity (4:13-14) was an oozing eye sore, as some commentators have suggested. In Greek culture, friendship was especially demonstrated by sacrifice; Paul here reaffirms the bond that exists between himself and the Galatians. Letter writers sometimes appealed to the recipients' love for them (e.g., Fronto, *Ad M. Caesarem* 5.1-2; Symmachus, *Epistles* 1.95.2). Likewise, letter writers sometimes affirmed their affection by protesting the recipients' lack of or decline in comparable affection.

4:16-17. Demagogues who told people what they wanted to hear became popular through their flattery. Moralists thus always pointed out that the flatterers were not concerned for their hearers' good; those who told them the truth openly were those who really loved them (cf. similarly Prov 27:6). Speakers would sometimes ask what crime they committed against their hearers (e.g., Dio Chrysostom, *Orations* 45.8) or would rhetorically confess a noncrime (cf. Acts 24:14). Speakers could complain if someone treated them as an "enemy" without good cause (*Cicero, *For Sestius* 52.111) or could ask why accusers treated the speaker as an enemy when he has loved them so much (Sallust, *Letter of Gnaeus Pompeius* 1).

4:18. In contrast to the Galatians' response to his opponents' flattery (4:17), the Galatians had sought Paul in genuine love (4:13-15)—as long as he was with them to defend himself (4:16). In ancient thought, letters were a surrogate for one's presence; Paul here hopes to reverse their questioning of his teaching.

4:19. Teachers were often viewed as "fathers." Galatians well understood the Roman custom of the ruling father, whose authority over his children was absolute. But Paul appeals to a different aspect of ancient parenthood: that of affection and intimacy. Although the image of affection was also applied to the father, Paul here takes the role of the mother as well. Labor pains were regarded as the severest pains humans experienced, and even with skilled midwives, mothers often died in childbirth. Paul's image of his love and sacrifice—and of their apostasy—could not be more graphic. Some others in antiquity borrowed the metaphors of pregnancy, midwifery and birth pangs for their arduous work.

4:20. Rhetoricians like Isocrates recommended honestly confessing, "I am at a loss as to what to say," when confronting an emotionally stirring and painful situation. (Pretending such distress that one could not decide what to do was called *aporia* by rhetoricians.) Letters were considered a surrogate for one's presence (4:18) and were supposed to reflect the same character the person would display if present. But it was easier for Paul to write stern letters than to be stern in person (2 Cor 10:10-11); indeed, even when he was writing a letter of blame, it hurt him worse than it hurt them (2 Cor 2:4).

4:21–5:1
The Hagar-Sarah Analogy

If Genesis derives from the period of Moses and the exodus, the literary function of the Hagar *narrative could include a warning to the Israelites against going back to Egypt (Gen 16:1), although Hagar is ultimately more a positive than a negative character. Further, the entire section of Genesis (chaps. 16–21) emphasizes that the child who came according to God's promise (the promise Abraham believed in Gen 15:6; cf. Gal 3:6, 14) was the key to everything else God had promised Abraham; the child conceived "according to the flesh," by merely human means, was blessed by God but had nothing to do with this promise. Unlike the interpretations of *Philo and some other interpreters of his day (and not a few modern sermon illustrations), Paul's "allegory" (a term with a wider sense in the first century) is an analogy controlled by the biblical text, not merely by what he wants to say. Some think that Paul replies to an opposing argument that only Jewish people and circumcised converts can be Abraham's children.

4:21. "Tell me" was one way of addressing an imaginary opponent in a *diatribe. In common Jewish parlance, "the Law" included Genesis, hence the Hagar-Sarah story.

4:22-23. When Abraham and Sarah tried to have a son by human means (apart from a divine intervention), they had Hagar bear a son to Abraham (Gen 16:1-4, 15). (Scholars have often suggested that they were following an ancient Near Eastern custom of using the barren wife's handmaid as a surrogate mother.) But God still planned to send a son miraculously, a son who would inherit the covenant God had made with Abraham (Gen 17:15-21). Paul is still playing on the slave-free image of 3:23–4:11.

4:24. Given his pedagogical views, Philo naturally interpreted Hagar as imperfect training and Sarah as perfect virtue. Paul instead draws an analogy between the slave, who produced according to the flesh, and those who seek to fulfill the *law's righteousness according to the flesh. Hagar was from Egypt (Gen 16:1) and thus could have reminded the

first Israelite readers of Genesis of their own slavery in Egypt; Mount Sinai was near Egypt.

4:25. "Arabia" included Mount Sinai, south of Judea, as well as the northward area mentioned in 1:17. The Nabataean Arabs were viewed as Ishmaelites, descendants of Hagar, in Paul's day, thus making the connection clearer to ancient readers familiar with eastern Mediterranean geography. Commentators have suggested that Paul answers his opponents' claims here, because an allegorical style of argumentation is rare for him. His opponents may have identified Sinai with the new Jerusalem, the place from which the law would go forth in the future (Is 2:2-4; cf. 65:17-19).

4:26. Many Jewish texts in Paul's day reinforced the *Old Testament hope of a new Jerusalem, often speaking of a heavenly Jerusalem that would come down to earth. These texts also sometimes spoke of Jerusalem (present or future) as "our mother" (e.g., **4 Ezra* 10:7; cf. Is 66:7-10 with 65:17-18). Others spoke of the Jerusalem "above" (*4 Baruch* 5:35). (*Gentiles often spoke of earth as a "mother," and the mother goddess was particularly popular in Phrygian Galatia; but Gentiles also spoke of their "mother city" and would understand that Jerusalem was Judeans' mother city.) Because Judaism associated the *Messiah and the *Spirit with the end time, Paul would naturally identify followers of the Messiah Jesus with the future Jerusalem rather than with the present one.

4:27. Isaiah 54:1, following Isaiah 53, depicts the restoration of God's people in terms of Jerusalem as a mother giving birth (relevant for Gal 4:26). It was natural for some Jewish teachers to connect Isaiah 54:1 (which Paul cites here) with Genesis 21:2: Sarah's giving birth typified her descendants' giving birth after the suffering of the captivity to a restored Israel and Jerusalem. Perhaps Isaiah himself intended such an allusion (Is 51:2).

4:28. Paul's opponents argued that one must be circumcised to enter the covenant of Abraham and Isaac and become their spiritual descendants. Although they could make a strong case from Genesis 17:10-14, Paul goes beyond Jewish tradition (which generally expected the law to be strengthened, not radically changed, in the end time). Circumcision was a sign of the covenant, but a greater proof of the new covenant is the gift of the Spirit (Ezek 36:24-27), which makes the lesser sign unnecessary; the Messiah's coming has inaugurated a new era in which the old rules no longer strictly apply (Gal 4:4, 26). Under this new covenant, these Gentile Christians are children of Isaac, and their circumcising opponents, who resist the real point of the new covenant, are spiritual Ishmaelites.

4:29. That the inferior are envious of the superior was a frequent moral in antiquity; cf. 1 John 3:12 or Philo's work entitled *That the Worse Attack the Better* (regarding Cain and Abel); the Old Testament likewise often illustrated that the wicked persecute the righteous (e.g., Ps 37:32). Paul uses this idea to explain why his Jewish Christian opponents are succumbing to the pressure of non-Christian Jewish opinion (cf. 5:11; 6:12-13).

4:30-31. Paul's opponents felt that uncircumcised Gentiles were excluded from the covenant; Paul here argues that it is instead the opponents who are. Completing his analogy, he cites Genesis 21:10: Hagar's line could not inherit with Sarah's, and Sarah demanded that Abraham expel Hagar and Ishmael lest Ishmael have a legal right to Isaac's inheritance. Paul calls on his readers to do the same—to expel his opponents, the spiritual Ishmaelites.

5:1. On the "yoke," see comment on Acts 15:10.

5:2-6
The Real Law

In 5:2–6:3 Paul emphasizes that the real *law is of the *Spirit and of love, not of the flesh.

5:2-3. Most Jewish teachers allowed that righteous *Gentiles could be saved by keeping merely the basic laws believed to have been given to Noah; but any Gentile who converted to Judaism was responsible to keep all 613 commandments given to Israel at Mount Sinai (according to rabbinic count). Rabbis said that the law was a whole, and one had to keep all of it; rejecting any part of it was tantamount to rejecting the whole thing. *Stoics believed that all transgressions were equal (Pliny, *Epistles* 8.2.3); many others rejected this idea (e.g., *Cicero, *On the Ends* 4.27.74-75).

5:4. Although most Jewish people believed that they were born into the covenant by virtue of being Jewish, they recognized that

one could be cut off from the covenant by refusing to obey it. But because salvation is only by *Christ (2:21), Paul declares that seeking it any other way leads to being "cut off" (NRSV).

5:5-6. Most Jewish people believed that the Spirit had been active in the *Old Testament and would become more fully active again in the end time. For Paul, the Spirit activates the power of the future *kingdom in believers' lives in the present, thus enabling them to experience the "righteousness" or "justification" that will be fully revealed at Christ's return. See comment on 6:15.

5:7-12
Paul Castigates His Opponents

5:7-8. Ancient writers on moral topics often compared the moral life to running a race. Paul here speaks of someone "hindering" (cf. NASB), possibly meaning "cutting in" (NIV, fitting the term's etymology, though it can refer to any sort of interrupting or hindering), which throws the runners off balance and perhaps out of the race. *Rhetorically skilled persons liked to play with words, and Paul here alludes to circumcision (which involved cutting), as in 5:12 ("cut off," KJV).

5:9. One of yeast's most basic properties is that it spreads throughout the dough; Paul uses the same idea, possibly an ancient proverb, in 1 Corinthians 5:6 to warn of the negative effects of an unchecked spiritual malignancy.

5:10. Letter writers urging a course of action sometimes expressed confidence in their readers (e.g., *Cicero, *Letters to Friends* 2.4.2).

5:11. If Paul were simply converting *Gentiles to Judaism in the ordinary manner (circumcision for the men, *baptism for both men and women), he would not be experiencing Jewish opposition—to which his opponents in Galatia, more sensitive to their own culture's expectations than to those of the Galatians' culture, have accommodated themselves (6:12-13). (If his readers are in South Galatia, Acts 13–14 records some of the persecutions.)

5:12. "Cutting themselves off" (cf. KJV) could mean to cut themselves off from the community, but most commentators take the words as meaning "mutilate" (NASB), "emasculate" (NIV) or "castrate" (NRSV, GNT) themselves: while they are circumcising others, they ought to make a full sweep of themselves and remove the entire organ. Although Paul's language purposely avoids being explicit, there is no reason to think that such an insult is beneath him; witty insults were the mark of good public speakers in the heat of debate, and Paul is far more impassioned in his criticism of his opponents than in his blame of the Galatians themselves. Many pagans thought of circumcision as a form of mutilation, and the Roman emperor Hadrian later outlawed it under an anticastration law. (Many people also ridiculed some self-castrated followers of a Phrygian goddess.) But as Paul knew, Jewish people particularly abhorred eunuchs, castrated men (Deut 23:1).

5:13-18
Fulfilling the Law

5:13-14. Other Jewish teachers also summarized the humanward commandments of the *law in terms of this quotation from Leviticus 19:18; Paul prefers this summary to all others, however, because this was the summary Jesus offered (Mk 12:31).

5:15. The ancients (especially in the *Old Testament and Jewish sources, e.g., Prov 30:14; Ezek 34:3; Mic 3:2-3) used the metaphor of being eaten by others as a grotesque description of a horrible fate or inconceivable wickedness, such as exploitation (literal cannibalism horrified ancient sensitivities even more than it does modern ones).

5:16. The Old Testament and Judaism spoke of "walking" (so KJV and NASB here) in the way of the Lord, in righteousness, in the law and so on (e.g., Lev 26:3; 1QS 3.9; 5.10 in the *Dead Sea Scrolls); it meant "behaving" in these ways. Jewish teachers described their moral laws derived from the Old Testament law as *halakhah,* which literally means "walking." Although this expression was not as common in Greek, Paul's hearers (especially those becoming more acquainted with the Old Testament and Judaism) would understand his point. He may allude here to Ezekiel 36:27: when God put his *Spirit in his people in the end time, they would walk in all his commandments, even though they had failed to keep the law's righteousness in their own strength.

5:17. "Flesh" is human weakness and mortality ("human nature"—GNT), and suggests

the best (or worst) anyone can do in himself or herself. Philosophers and Jewish teachers sometimes spoke of an internal conflict between reason and passion, but some argue that the point here is that, because flesh has nothing in common with God's power, one can be either a person of the Spirit (a Christian) or a person of the flesh (one who runs his or her own life without depending on God); one cannot have it both ways (5:16, 18). (Where such binary language appears in ancient sources, it speaks in principle rather than claiming perfection; although the Dead Sea Scrolls recognize that all humans are imperfect in themselves, they speak of humans being ruled either by the spirit of truth or the spirit of error.) See comment on the introduction to Romans 8:1-11.

5:18. Philosophers often said that the wise person needed no laws, because he would simply choose to do what was right by the law written in his heart; the Old Testament also speaks of the law's being written in one's heart, a benefit that characterizes especially the new covenant (Jer 31:31-34). The Old Testament often described Israel's being "led" by God, especially in the wilderness after he redeemed them from slavery in Egypt.

5:19-26
Flesh Versus Spirit

When "flesh" referred to people in the *Old Testament, it meant humans viewed in terms of their finiteness, creatureliness and mortality. The *Dead Sea Scrolls thus often apply this idea especially to the moral weakness of humans in themselves, their susceptibility to sin.

The *Spirit of God, however, energized people in the Old Testament to speak and do God's works miraculously. In the Old Testament, flesh and Spirit had nothing in common (Gen 6:3). (The view that Paul contrasts the human body with the human spirit, rather than human weakness and God's Spirit, is based on a Platonic misreading of Paul, the sort that led to *Gnosticism. Despite its strong condemnation of Gnosticism, the later *church was influenced by some of the same Greek philosophical ideas.) Paul thus declares that those who have God's presence living inside them by the Spirit have new moral ability (cf. Ezek 36:25-27) and are able to reflect God's own character; for Paul, this was the only way for believers to live out the new life.

5:19-21. Ancient writers commonly used lists of vices, as here, although Paul is much more forceful (v. 21) than most Gentile writers (who often said one merely needed to avoid excess in most vices). Ancient moralists also could use lists of virtues (5:22-23; Dead Sea Scrolls 1QS 4.3; in the Old Testament, cf. Ps 15). Some writers, like here, laid vice and virtue lists side by side to contrast them. The standard moral image of the "two ways" (the good and bad ways) or two dominions is frequent in both Jewish and non-Jewish texts. "Works" (KJV) recalls the "works of the *law" that Paul has challenged throughout the letter (2:16; 3:2, 5, 10, 12), but "of the flesh" (KJV, NASB, NRSV) tells why: they are merely human, without God's empowerment.

5:22. The Old Testament also uses the metaphor of God's people bearing "fruit" (e.g., Is 27:6; Hos 10:1; 14:8); Greek sometimes employed the term figuratively. Here Paul contrasts "fruit" with "works" (5:19) because fruit is simply produced by the nature of the tree, and for Paul, believers' nature has been made new in *Christ (5:24). Philosophers sometimes contrasted positive and negative emotions (Peripatetics trying to rule the latter, and *Stoics rejecting the latter wholesale); some of their positive ones correspond with much of Paul's fruit of the Spirit, although his concern is moral more than emotional (e.g., "peace" may be at least partly relational, Rom 12:18; 14:19; 2 Cor 13:11).

5:23. Self-control was one of the virtues most emphasized by philosophers and respected in Roman society. Philosophers often taught that the wise needed no law to regulate them, because their virtue itself was a law. Paul says that people of the Spirit fulfill the moral intent of the law (5:14) by means of the Spirit guiding their lives.

5:24. Philosophers warned about the dangers of unchecked passions; Stoics (the most popular philosophic school of the era) spoke of all passions (negative emotions) being eradicated in the (ideal) wise person, although generally not claiming to have attained this themselves. Paul speaks here not of controlling or overcoming passions, however, but of a completed death with *Christ in principle (2:20; 6:14). Paul nearly always uses verbs

in the past tense for this death; one does not die to sin gradually (which the imperfect or present tense would suggest) by works, but one accepts one's completed (the aorist and perfect tenses he uses signify the action is completed) righteousness by faith and learns to live accordingly (5:19-23).

5:25. Believers "live" or "have life" by the Spirit; they should then "behave" or "walk" (KJV, NASB) the Spirit's way, which will fulfill the moral principles of biblical law (5:16).

5:26. Paul returns (5:15) to a call to harmony, a common theme of ancient speakers. For Paul, true depth of relationship with God must be expressed in one's relationships with others.

6:1-5
Restoring Others Meekly

Paul continues his exposition on the true law of the *Spirit, the law of *Christ (6:2). The gentleness that comes from the Spirit (5:23) is the proper way to correct faults; conversely, the legalist who is obsessed with addressing his or her own spirituality by fleshly means will have little patience with the spiritual needs of others.

6:1. A variety of ancient sources, including Greek and Jewish wisdom traditions and the *Dead Sea Scrolls, stressed wise and patient reproof for the other person's good, and often stressed examining oneself before correcting others. Judaism considered humility one of the greatest virtues, even for the most noble.

6:2. The image of bearing another's "burden" or "weight" (the term was also applied metaphorically to griefs) might remind readers of slaves or of impressment (Roman soldiers could require local people to carry something for them). In either case, it is an image of subservience that demands more than convenience. "Bear burdens" in this context must include helping a fellow Christian deal with sins (6:1). Many take "law of Christ" as referring to a saying of Jesus; others argue that in the context of Galatians it more likely refers to his example and the character of Jesus imparted by the Spirit (2:20; 5:14).

6:3. Philosophers also warned about the ignorant thinking themselves to be someone when they were nothing (*Epictetus, *Discourses* 2.24.19; Diogenes Laertius 2.38).

6:4-5. Greek literature includes some maxims similar to "each one shall bear his own load" (6:5, NASB), which usually stress self-sufficiency. This could relate here to supporting oneself and others (6:6), but in the context of stressing humility in dealing with others (6:1, 3-4), bearing one's own load (6:5) might mean answering to God himself for what one has done (6:7-8).

6:6-10
Providing for Others

This passage may have a financial emphasis (6:6, 10), although it need not be limited to the collection for the Jerusalem *church (1 Cor 16:1), as some scholars have suggested.

6:6. Many teachers charged fees for their instruction; some philosophers insisted that they and their students should share all things in common, and some groups of teachers and *disciples lived communally. Here Paul urges the Galatian Christians to support their teachers who could provide sound teaching (unlike that of his opponents).

6:7. Reaping what one sowed was a familiar image in antiquity (in the *Old Testament, e.g., Job 4:8; Prov 22:8; Hos 8:7; 10:12; cf. Prov 11:18; Is 3:10; Jer 12:13; widespread in other Jewish literature). Paul elsewhere used sowing as a monetary image (2 Cor 9:6), as did some other ancient authors; thus here he might continue the thought of 6:6. "Do not be deceived" was a familiar phrase in ancient moral exhortation (e.g., *Epictetus, *Discourses* 2.20.7; 2.22.15).

6:8-9. On the flesh's mortality, see the introduction to 5:19-26; Paul often associates the Spirit with *resurrection of the body (cf. Ezek 37:5-14).

6:10. With the exception of the *Cynics, philosophers and moralists advocated working for the common good; no one would have complained about a group that lived accordingly. Paul's emphasis is especially on (though not limited to) ministering to the needs of one's fellow believers.

6:11-18
Crucifixion, not Circumcision

Greeks and Romans viewed circumcision as a mutilation of the flesh, but it in no way compared with the most shameful and painful

form of death employed in the Roman world—crucifixion.

6:11. Most letters of this length were dictated to *scribes, who wrote small to finish the task quickly. Paul, who may be unaccustomed to writing full letters (or whose hands, some suggest, may have been weakened by leatherworking in cold artisan shops in the winter), cannot write small and quickly. Some documents also seem to have called attention to especially important points at their beginning or end by using larger letters. Whatever the purpose of "large letters" here, the main point is that not a scribe but Paul himself writes this section, as the handwriting shows. Paul's special effort expresses (as it often did) special affection, his literary competence and/or the special importance of what he writes.

6:12-13. The metaphor here is grotesque: Paul has been assailing those who live "by the flesh," by merely human, mortal power, ignoring God; physical circumcision was commonly said to be "in the flesh" (so also KJV, NASB, NRSV here). Here Paul may speak of these culture-bound missionaries as if they want to show the Galatians' foreskins to their senders. See comment on 4:29 and 5:11.

6:14. Paul boasts in a wounding (cf. 6:17) far more severe than circumcision: crucifixion. He is thus unafraid to face persecution from hostile Jewish leaders; cf. 5:11.

6:15. "New creation" means that the life of the future world has begun in believers now (see comment on 5:5-6; 2 Cor 5:17). Again Paul appeals to the product of God's power, as opposed to any merely human effort.

6:16. Paul blesses those who "walk by this rule" (NASB) as opposed to the "rule" of Jewish *halakhah* (see comment on 5:16). The phrase "peace be with/on" someone was a common Jewish expression; it is one of the most common phrases on Jewish tombs. "Peace be on Israel" was also a regular *synagogue prayer, the final benediction of the Amidah (its basis is as early as Ps 125:5; 128:6); it is a fitting antithesis to the curse against the *law's distorters in 1:8-9. (The blessing of "mercy upon" someone was also familiar; e.g., **Jubilees* 1:20; 22:9; **Psalms of Solomon* 4:25.) Scholars dispute whether "Israel" here means the faithful Jewish remnant or all believers as spiritual heirs of Abraham (3:7, 29).

6:17. Soldiers or others often displayed their wounds as signs of loyalty or to invite sympathy for their claims. Some slaves (cf. *Philo, *That Every Good Person Is Free* 10), criminals and prisoners of war were tattooed, as were devotees of some religious cults in Egypt and Syria. Greeks and Romans normally associated tattooing with barbarians, and branding was usually reserved for horses. Paul's term is the one normally used for tattooing, but could more commonly apply simply to any mark or puncture wound. In this context, Paul simply means that he was crucified with *Christ (6:14), who was flogged and nailed to the cross; the evidence was Paul's "scars" (GNT) from his past persecutions (5:11; 6:12-13).

6:18. The term often translated "brothers" here means "siblings" (i.e., "brothers and sisters"—NRSV; in Greek, a masculine plural form can include women). It was regularly applied to those of one's race or nationality, but members of religious associations also often addressed one another in this manner; see comment on Acts 9:17. For a blessing of *grace, see comment on Galatians 1:3; Romans 1:7.

Ephesians

Introduction

Authorship. Although scholars often dispute the authorship of Ephesians, most of the so-called non-Pauline words, phrases and stylistic features appear at least occasionally in letters that everyone agrees were written by Paul. Many differences between Ephesians and earlier Pauline letters are insignificant. For example, some note that "the genuine Paul" speaks of *Christ as the head (1 Cor 11:3) and the *church as his body (Rom 12:4; 1 Cor 12:12) only separately. But ancient philosophers sometimes used the body metaphor with the head and sometimes without it, and requiring Paul always to express himself the same way in his few extant letters, although other writers did not, is hardly fair to Paul.

Unlike many of his earlier letters, Ephesians, Philippians and Colossians seem to have been written after Paul had experience in presenting Christianity in an ancient academic context, where he would have used some basic philosophic language to communicate to his hearers (Acts 19:9). That Paul could adapt his language to his audience, including those to whom the occasional sort of *Stoic language in Ephesians appealed, is evident elsewhere in his writings (e.g., Rom 1; 1 Cor 8); such language is more common in Ephesians and Philippians, with some more Middle Platonic language in Colossians. Although the dispute over the authorship of Ephesians will continue in scholarly circles, this commentary works from the position that Paul wrote it.

Genre. Paul's exhortations in the letter cover several main themes, all of which the recipients' situation seems to have elicited (although he uses standard forms to describe them). This point would argue against the idea that Ephesians is merely a "letter essay" communicating general truths.

The abundant parallelism and repetition in the letter have been compared with Hebrew poetry, but they were also used in epideictic *rhetoric (i.e., in orations of praise concerning gods or humans). Rhetoric could expand statements, sometimes to underline their force; cf., e.g., "power" and "might" in Ephesians 1:19 (also Col 1:11; 2 Pet 2:11; but also, e.g., 1 Chron 29:12). Some compare this more flowery rhetorical style of repetition in Ephesians to what ancient writers called the Asian

rhetorical style, which would be appropriate in and around Ephesus. Worship language is more common in the first three chapters of the letter, which elaborate the sort of introductory prayer and thanksgiving that often appeared in ancient letters. To the extent that we can speak of rhetoric in letters (which were usually nonrhetorical, but also usually did not include argumentation as Paul's letters do), the rhetoric here is mixed: the exhortation parts of his letter are "deliberative," intended to persuade the readers to a particular course of action; other parts of his letter are "epideictic," such as where he praises God and praises the church that is to reflect God's glory to creation.

It is possible that Paul, drafting other letters at the same time (e.g., Colossians), used a *scribe for some letters to help him adapt his basic message for different situations in different churches.

Situation. Paul writes this letter from Roman custody, probably in Rome. As readers in the Ephesian region of Asia Minor would know, he had been arrested on the charge of having brought a *Gentile into the temple (Acts 21:28-29; 28:16). Ethnic and cultural division between Jew and Gentile was a major issue in the Ephesian church (cf. Acts 19:17), and Paul was one of the best-qualified writers of antiquity to address both sides intelligently.

From his detention under Roman authorities (probably in Rome), Paul is also aware of the possibility of imminent persecution and the need for the church to be a good witness in society (cf. especially comment on Eph 5:21–6:9). He is also aware of the struggle of some of the believers with their own background in the occult practices of Asia Minor—*magic (Acts 19:19), astrology and attempts to escape the astrological power of Fate (cf. comment on Eph 1:8-11, 19-23; 3:9-11).

Commentaries. The most thorough and useful are Harold W. Hoehner, *Ephesians: An Exegetical Commentary* (Grand Rapids: Baker, 2002); Markus Barth, *Ephesians,* AB 34, 34A, 2 vols. (Garden City, NY: Doubleday, 1974); and A. T. Lincoln, *Ephesians,* WBC 42 (Dallas: Word, 1990). Less technical but useful commentaries include Pheme Perkins, *Ephesians,* ANTC (Nashville: Abingdon, 1997); Charles H. Talbert, *Ephesians and Colossians,* Paideia (Grand Rapids: Baker Academic, 2007); G. B. Caird, *Paul's Letters from Prison,* New Clarendon Bible (Oxford: Oxford University Press, 1976); George Johnston, *Ephesians, Philippians, Colossians and Philemon,* Century Bible (Greenwood, SC: Attic, 1967). Some of my primary sources for my treatment of Ephesians 5:18–6:9 appear in Craig S. Keener, *Paul, Women and Wives* (Grand Rapids: Baker Academic, 1992), pp. 133-224, 258-79.

1:1-2
Introduction

As notes in most translations point out, not all manuscripts include "in Ephesus" (v. 1). Many scholars have argued that Ephesians was originally sent to a number of *churches, of which Ephesus was only the most prominent. (Thus it would be a "circular letter," like imperial edicts.) But because Ephesus (the province's most prominent city) was one of the cities addressed, and because all these churches would presumably be in the area around Ephesus, the history of the Ephesian church will help us understand the background to this letter (see Acts 19:1-41).

"*Grace" and "peace" were variations of standard greetings and blessings from deity; what is significant here is that they are "from God the Father *and* the Lord Jesus Christ." See further the introduction to Paul's letters and comment on Romans 1:1-7.

1:3-14
Praise for Salvation

The opening, or *exordium,* of Paul's letter includes a benediction ("Praise be to God"—NIV, or "God be praised") and a prayer; ancient letters commonly included either prayers or thanksgivings, although Paul's elaboration of them here is unusual. Many Jewish prayers would begin with "Praise be to God who [helps his people in some way]." In Greek, 1:3-14 is one long praise to God; this one recounts, as Jewish prayers often did, God's redemptive plans and acts on behalf of his beloved people.

In these verses as many as eleven different terms used for Israel in the *Old Testament are applied to believers in Jesus. Because the church in Ephesus comprised both Jews and *Gentiles (Acts 19:17), and Jews and Gentiles had different cultural practices, the church may have had cultural and ethnic tension. Paul reminds believers that whatever their ethnic or cultural background, they are all one people in *Christ and must work together for God's purposes (cf. 2:11-22).

1:3. Today we distinguish between "the heavens" in a scientific sense (i.e., the outer atmosphere and the rest of the universe except the earth) and the spiritual place God lives. But in Paul's day he did not need to make this distinction to communicate to his readers; they divided "the heavenly realms" differently from the way we do. Almost everyone in the ancient world believed that the heavens had numerous levels (often three or seven), that different spiritual beings (various kinds of angels, *demons, stars, etc.) lived in different levels and that God or the purest spiritual beings lived in the highest heaven. In much Jewish teaching, the spirits of the righteous would live with God there after death. "Heavenly realms" (NIV) can thus mean both "where God is" (as here) and "where the angelic powers live" (as often in Ephesians).

1:4-5. Salvation was God's initiative, because of his love (Deut 7:7-9). The Old Testament declares that God "predestined" or (literally) "chose" Israel (e.g., Deut 14:2) in Abraham to be his covenant people and adopted them as his children, but that his people often fell short of the covenant. Paul explains that in a practical sense one becomes a member of God's covenant by Christ and what God has done, not by one's background.

1:6. One reason God chose Israel was for them to bring him glory (Is 60:21; 61:3; Jer 13:11); so central was revealing his glory that even his acts of judgment were meant to turn people to him (Ex 7:5; Amos 4:6), the real source of life (Jer 2:13).

1:7-8. God had redeemed Israel (i.e., freed them from slavery) through the blood of the Passover lamb. The Old Testament also connected forgiveness with the blood of animal sacrifices. Paul blends these images here. Closely related terms such as "wisdom" and "insight" were often paired in biblical language (e.g., Ex 31:3; 35:31; Prov 1:2, 7; 2:2, 6).

1:9-12. Jewish people sometimes spoke of the secrets or mysteries of God's plan, now revealed (e.g., Dan 2:27-30; *Dead Sea Scrolls 1QS 4.6; 11.19). It was a common Jewish belief that history was moving through many stages to its climax, when everything would be put under God's rule. Some philosophers argued that the whole universe was permeated by God and would be absorbed back into him. Like Jewish writers who adapted the language of such philosophers, Paul believes that history moves toward a climax of subordination to God, not absorption into him. The Old Tes-

tament and Judaism recognized that God had a sovereign plan in history to bring it to this climax. On "inheritance" (KJV, NASB, NRSV), see comment on 1:13-14. On God's ultimate purpose here, see comment on 3:8-11.

1:13-14. A wax seal would have a mark of ownership or identification stamped in it, identifying who was attesting what was inside the container that had been sealed. Because Scripture suggested that the *Spirit would be made especially available in the time of the end (cf., e.g., Joel 2:28), Paul here speaks of the Spirit as a "deposit" (NIV)—a term used in ancient business documents to mean a "down payment." Those who had tasted the Spirit had begun to taste the life of the future world that God had promised his people.

After God "redeemed" (see comment on 1:7-8) Israel from slavery in Egypt, he led them to their "inheritance" or "possession" in the Promised Land. Later Jewish literature viewed the world to come as Israel's ultimate "inheritance," and early Christian writers used this language the same way (Mt 5:5; 25:34; Rom 8:17; 1 Cor 6:9; Jas 2:5). For Paul, Christians are God's people, redeemed but waiting for the completion of their redemption; as with Israel of old, God's presence among them is the assurance that he will take them into the land he has promised (cf. Hag 2:5). Writers sometimes repeated a refrain, as here (for God's praise in 1:6, 12, 14); the repetition of "in whom" (1:7, 11, 13; cf. 2:21-22; 3:12) also reinforces the point (similar to *rhetorical *anaphora*, repeating an opening phrase).

1:15-23
Prayer for Revelation

Ancient letters often included prayers or mention of prayers for the recipients, though these were typically brief.

1:15-16. Like pious Jews, pious Christians apparently had a time set aside for prayer each day. Many pious Jews prayed several times a day, and if Paul continued such a custom we can understand how he could pray for all his churches.

1:17-18. Jewish people commonly prayed for enlightened eyes to understand God's Word; the *Old Testament also spoke of opening one's eyes to God's Word (Ps 119:18) or to other spiritual realities (2 Kings 6:17). Some Jewish sources characterized the Spirit of God as the "Spirit of wisdom" (cf. 1QS 4.3 in the Dead Sea Scrolls; **4 Ezra* 5:22; the Old Testament especially emphasizes this: e.g., Ex 28:3; 31:3; 35:31; Is 11:2; cf. Deut 34:9). For blessings about enlightening, see, for example, Numbers 6:25; Psalm 19:8; for enlightening with wisdom, see, e.g., 1QS 2.3 in the Dead Sea Scrolls.

*Rhetorically skilled writers often introduced major themes in their introduction, and Paul is no exception. He is about to explain the points that he has been praying for them to understand. On "inheritance," see comment on 1:13-14.

1:19-20. A daily Jewish prayer viewed God's ability to raise the dead in the future as the ultimate example of his power. Paul agrees, but for Paul the decisive event has already begun: the first installment of the future *resurrection has taken place. The position to a ruler's right was a position of great honor and authority; to be seated at God's right hand was to be enthroned as ruler of the cosmos, even if not all his enemies had yet been destroyed (Ps 110:1). The piling up of closely related words (such as power, strength and might; cf., e.g., 1 Chron 29:12; Is 40:26; Jer 16:21; **1 Enoch* 1:4; 60:16) fit Jewish praise and also the sort of flowery rhetoric valued for praise in Asia Minor; God's power was experienced through the Spirit (Mic 3:8; Zech 4:6; cf. Eph 1:17). On "heavenly places," see comment on 1:3.

1:21-23. The subordination of these powers beneath *Christ in this age and the coming one express the confident exaltation above enemies in Ps 110:1 (linked with Ps 8:6; cf. 1 Cor 15:27). Exorcists and magicians tried to manipulate powerful spirits by invoking their names (see comment on Acts 19:13); the supremacy of Jesus' name above all other names means that he is higher than all the spirit-powers being invoked and could not be exploited.

By Paul's day Jewish people commonly recognized that demonic and/or angelic powers were at work behind the political structures of the world; these powers were thus thought to direct the earthly rulers and peoples (v. 21; see Deut 32:8 LXX; **Jubilees* 15:31-32; 35:17; Dead Sea Scrolls 1QM 15.13-14; *1 Enoch* 61:10; esp. Dan 10:13, 20; for angelic ranks, *1 Enoch* 69:3).

A growing view among some in Paul's day

was that the world was run by Fate, which was usually expressed by the stars (which were viewed as heavenly beings). Some *mystery cults, such as the cult of Isis, later gained popularity by claiming power to free initiates from Fate. Jewish people often believed that these powers ruled all the nations except Israel (*Jubilees* 15:32; *Sifre Deuteronomy* 315.2.1; cf. Dan 10:21; 12:1); later, by the third century, some teachers explained that Israel had been lifted above those heavenly powers in Abraham their ancestor (*Genesis Rabbah* 44:12; 48:6). Paul says that those united with Christ had also been raised above those powers. His words would be a great encouragement to Christians who had been converted from an occult background (cf. Acts 19:18-20). Some may have expected *eschatological exaltation to the heavens (**Testament of Moses* 10:8-10; cf. Dan 12:3).

Jewish teachers came to speak of these heavenly powers that guided earthly rulers as "angels of the nations." Such beings were the ultimate expression of the spiritual division among different peoples, but Paul says that this distinction has been transcended in Christ—again making a point relevant to a congregation experiencing ethnic or cultural tensions (see introduction to 1:3-14). Thus Christ's body is "that which is filled by him who fills all"—"all" indicating especially representatives of all peoples in the church (4:6-10; cf. 3:19; 5:18). Rhetoric liked repetition for emphasis, thus the repetition of both filling and "all" here (for two "all" words together for emphasis, cf., e.g., *Philo, *Embassy to Gaius* 118); rhetoric also liked alliteration, and in Greek these repeated words begin with *p*. Such language was common in expressing praise for gods or rulers.

2:1-10
Exalted with Christ Above Sin

Paul continues to explain God's gracious exaltation of the Christian with Christ.

2:1-2. Most Jewish people believed that *Satan or the chief of the heavenly angels of the nations ran the whole world except for Israel (cf., e.g., 1QS 3.20-21; 1QM 17.5-6 in the *Dead Sea Scrolls). "Ruler with authority over the realm of the air" was a natural title for his dominion; it was commonly believed that evil spirits circulated especially in the lowest realm of the heavens (i.e., the atmospheric realm), far below the realm of God's highest angels and his throne. "Air" was the usual term for the atmospheric heaven. Some spoke of nonphysical death: for example, *Pythagoreans considered apostates "dead," *Philo regarded those who neglected their soul as "dead," later *rabbis called the wicked "dead," and so forth.

2:3. Many Jewish people sought to explain all sin as the direct result of demonic activity (cf., e.g., *Jubilees* 10:8; 12:20; especially the "spirit of error" in the Dead Sea Scrolls, e.g., 1QS 3.19, 24-25). Paul does not see sin as always directly inspired by *demons but thinks that the world is pervaded with the devil's less direct influence (including in ethnic division—1:21-23); one is not delivered from this influence by one's Israelite ancestry but (vv. 4-6) through faith in Jesus. "Children of wrath" is a Semitic construction indicating people destined for judgment.

2:4-7. This picture of God's delighting to bestow his love on his people forever develops *Old Testament pictures of his special love for his people (e.g., Deut 7:6-9).

Scholars have compared the image of the exaltation of the believers in 2:6 with the fairly common Jewish image of the righteous enthroned in the world to come; Christians have begun to experience the life of the coming age in advance (see comment on 1:14). The context would drive an additional point home especially forcefully to readers once enslaved by fear of Fate, the stars, *magic or spirits: to be "seated with Christ" means in 2:6 what it meant in 1:20-21—to be enthroned over the evil powers. Christians need not fear spirits, Fate or anything else; their lives are ruled by God.

2:8-10. Good works flow from what God does in us, rather than God's work in us flowing from our works. God redeemed Israel before he gave them commandments (Ex 20:1), and did not choose them because of their righteousness (Deut 9:5-6); it was always his purpose for good works to flow from his *grace, even if Israel (like many people today) did not always grasp that point (Deut 5:29; 30:6, 11-14). Most Jewish people in Paul's day apparently agreed in principle that they were saved by God's grace in the covenant, but they did not extend this idea to

non-Jews, who could not inherit the covenant by virtue of birthright.

2:11-22
United in the New Temple

2:11-13. Most ancient Jewish people believed that non-Jews could never participate in the fullness of the covenant without circumcision, although they could be saved by keeping some basic commandments. To be circumcised was to be grafted into the community of Israel, to become part of God's covenant people. That done "by hands" evokes a negative phrase in the Greek version of the *Old Testament (usually associated with idolatry; e.g., Lev 26:1).

2:14-16. Paul writes this letter from prison because he has been falsely charged with taking a non-Jew inside the temple in Jerusalem (Acts 21:28). Taking a non-Jew beyond the specified dividing point in the temple was such an important breach of Jewish *law that the Romans even permitted Jewish leaders to execute violators of this law(*Josephus, *Jewish War* 5.194; 6.124-26). Paul's readers in Ephesus and Asia undoubtedly know why Paul is in prison (Acts 21:27, 29); thus for them, as well as for Paul, there can be no greater symbol of the barrier between Jew and non-Jew than "the dividing wall" of verse 14. But Paul says that this dividing wall is shattered in *Christ (cf. 2:20-22). Paul's message would have been difficult for believers in many cities; a few years after this letter, the *Gentile residents of Caesarea (where Paul had recently stayed, Acts 23:23) slaughtered thousands of its Jewish residents (Josephus, *Jewish War* 2.457-58); Jews retaliated and attacked other cities (2.458-60); and Syrians then slaughtered thousands of Jews (2.461-68). For "He is our peace," cf. perhaps the Hebrew of Micah 5:5.

2:17-18. Isaiah 57:19 could be understood as referring to the scattered seed of Israel as those "who were far away," but not long before this passage God had promised that his house would be for foreigners too (Is 56:3-8). This text thus fittingly expresses Paul's point concerning the unity of Jew and Gentile in the new temple (cf. also Acts 2:39).

2:19. In many cities, foreigners who settled could remain "resident aliens" for generations, lacking voting rights and other privileges that belonged to citizens. Paul can play on the different senses of "house" in Greek: both "household" (as here) and a building (the temple as God's house; see 2:20-22).

2:20-22. In the Old Testament, the only division in the temple was between priests and laity, but by Paul's day architects had added barriers for non-Jews and for women (contrast 1 Kings 8:41-43); Paul says these barriers are abolished in God's true, spiritual temple. Some other Jewish writers spoke of God's people as his temple, but only Paul and other early Christians recognized that this new temple included non-Jews. (Paul derived the image of Christ as the cornerstone or capstone from Ps 118:22, probably via Jesus' teaching; see comment on Mk 11:10.)

3:1-13
The Mystery of a Unified People

The Bible had already taught that God would seek out non-Jews to join his people (Rom 16:26; e.g., Is 19:25); King David and others had welcomed non-Jews into the fellowship of God (e.g., 2 Sam 6:10-11; 8:18; 15:18-22; 18:2; 20:23; 24:18-24; 1 Chron 11:41, 46; 18:17). But to be full members of the covenant, male non-Jews had to be circumcised; by this period, men and women were also usually required to immerse themselves in water to become ritually pure. But the coming of *Christ had made it clear to his *apostles and prophets that by faith in Christ everyone could now approach God on the same terms.

Public speakers and writers frequently used a standard element of persuasion called *pathos,* an emotional appeal. By reminding his readers of what he, their apostle, had suffered for the ideal, multiethnic people that God was building, Paul appeals to them not to nullify his labors. The universal *church should be all that it is called to be, a united, multiethnic, interracial people in all its glory.

3:1. Being a Roman prisoner was normally a mark of shame but, like wounds (see comment on Gal 6:17), could arouse sympathy among loved ones. Paul's refusal to compromise the mission to the *Gentiles had precipitated his captivity (Acts 22:21-22; cf. 21:28).

3:2. Instead of immediately finishing the sentence begun in 3:1, Paul digresses concerning his mission for the Gentiles in 3:2-13; *digressions were common in ancient writings.

"Stewards" were household managers, often slaves or freedmen, with great responsibility and prestige in a wealthy home.

3:3-5. The term translated "mystery" was used in *mystery cults and elsewhere, but the main background for Paul's use of the term is in Daniel 2 and in Jewish writings (especially the *Dead Sea Scrolls) that follow Daniel. In the Dead Sea Scrolls it means especially God's plan for history, encoded in the Scriptures but understandable only to the wise or to those with the *Spirit's insight. Because most of Judaism believed that full-fledged prophets had ceased after the *Old Testament prophets died, Paul's claim that God has now actively unveiled his truth through "apostles and prophets" would underline for his hearers the uniqueness of the Christian claim. The content of his teaching would also be striking because of the frequent conflict between Jew and Gentile and frequency of anti-Judaism in antiquity. The "reading" (literally, 3:4) refers to the public reading of his letter in the worship service, necessary because most people could not read.

3:6. "Heirs" refers to the Old Testament idea that the Promised Land was Israel's inheritance; the "promise" was also a sole possession of Abraham's descendants (and those who joined that nation by circumcision). To make uncircumcised Gentile Christians part of this same covenant would have sounded like heresy to many Jewish readers, jolting their ethnic sensitivities.

3:7. The Old Testament often spoke of divine empowerment for God's servants (e.g., Ex 31:3; Judg 15:14); see comment on Ephesians 3:16.

3:8-9. When writers formed an unusual expression, as Paul does here (literally, "leaster"), it reinforced the point. For "stewardship" (NRSV: "administration"; NASB: "plan"), see comment on 3:1-2; for "mystery," see comment on 3:3-5.

3:10-11. Some pre-Christian Jewish texts also speak of God showing the angels his power and glory through his people, and thus receiving their praise. Because these heavenly "rulers" were viewed as angels of the different nations, the ethnic unity of the church (3:6-8) displayed the rule of God, whose authority transcended that of the angels and all earthly boundaries. The point is that the church, a people destined to bring eternal glory to God, represents God's ultimate purpose in history (see 1:9-12); all Christians should find their life's purpose in their role in that ultimate purpose (see 4:11-13).

3:12. "Boldness" often applied to the sort of frank speech appropriate among friends, but in Jewish circles also for prayer; here, conjoined with "confident access" (NASB), it probably relates to the certain place all members have in the household of God (2:18).

3:13. Roman detention was normally a matter of shame; Paul inverts this to honor in view of the reason he is detained. Paul also suffers for the purpose of serving the body of Christ as a whole; cities could view their local athletes as competing on their behalf in regional contests, and some viewed ideal leaders as acting or being used by God for the sake of their people.

3:14-21
Prayer for Empowerment

3:14. Paul returns to the point begun in 3:1 (writers often repeated some wording to signal that they were returning to their point after a *digression). Jewish prayers were usually offered standing, but kneeling or prostration was sometimes used (in the *Old Testament cf. 1 Kings 8:14, 22, 54; *Gentiles typically prostrated themselves also before rulers). Gentiles sometimes knelt to pray but this was not their usual posture for prayer except in extreme circumstances; like Jewish supplicants, they normally stretched out their arms with hands facing the gods being invoked (in the heavens, in the sea or toward statues).

3:15. Here Paul may mean that all peoples and families (i.e., each group descended from a common progenitor; see notes in NIV, NRSV) reflect God's own fatherhood over the world (cf., e.g., *Epictetus, *Discourses* 3.11.5); thus one would have to expect God's concern for all peoples (e.g., Gen 12:3). (Families "in heaven" may refer to the guardian angels of the nations.) Ancient writers often spoke of God as father in the sense of creator (*Gentiles often spoke of "the father of gods and people") and sometimes spoke of paternal authority in families as deriving from the example of God. The Roman father was also a supreme authority figure, with the right to rule all descendants as long as he lived.

3:16-17. Although Paul derives some language ("inner person") from the Greek world (see comment on 2 Cor 4:16), his ideas here are not specifically Greek, and other Jewish people had already adapted this language. Old Testament accounts associated the Spirit especially with prophetic endowment but also with purity, strength and prowess or ability to fulfill whatever God calls one to do; the Old Testament sometimes also presents internalizing the Bible as a way to overcome sin (e.g., Ps 119:11). Israelite piety also recognized God as the source of strength (e.g., Ex 15:2; Ps 18:1-2; 27:1; 59:17; 119:28; Jer 16:19). When Paul speaks of the ability to live rightly because *Christ himself lives in the believer through the Spirit, these points from the Old Testament are probably the closest parallels to his idea in ancient literature; apart from *Qumran texts (depending on the same biblical themes, esp. Ezek 36:25-27), rarely did anyone suggest that one's moral life would be empowered by the presence and activity of God. Paul advocates total reliance on *grace, even in the believer's ability to perform righteousness.

3:18-19. Many take "breadth and length and height and depth" to describe how all creation is filled with God's glory or as a description of the immeasurable vastness of his love. Some have suggested that Paul continues the temple image (2:18-22), describing the perfect cube proportions of the holy of holies in the Old Testament, although the idea is not explicit here. But the text probably applies the language of divine Wisdom (e.g., Job 11:5-9; cf. Job 28:12-28; Sirach 1:3) to God's love; cf. "manifold" (multifaceted) wisdom in 3:10.

3:20-21. Jewish people customarily ended their prayers with a blessing to God; sometimes the blessings closed with "forever and ever" (cf. 1 Chron 16:36; Ps 106:48). It was likewise customary to respond to prayers and benedictions with "Amen."

4:1-16
One Body, Many Members

Despite exceptions, most ancient letters simply addressed business or personal issues; many of Paul's letters, however, "preach." Persuasive speeches and letters often engaged in a detailed argument, but Paul to this point has mainly used "epideictic," or "praise," *rhetoric. He has praised the *church, calling it to be what God had planned for it to be. He now turns to an element characteristic of persuasive rhetoric (as the *exhortatio,* or exhortations) and more generally found in the advice of moralists and philosophers. Exhortation fills the rest of the book until the closing *peroratio,* or rousing conclusion, of 6:10-20.

4:1-2. Although gentleness was a recognized virtue even for rulers, Greek writers often viewed "meekness" in the sense of "humility" negatively, unless it was the socially appropriate self-abasement of a social inferior to a superior. On Paul's captivity (probably in Rome), see comment on 6:20.

4:3-6. Many Jewish teachers praised the virtue of peace. Paul drives home the point by repeating "one" multiple times (though in Greek it appears in varied forms). Some Jewish texts (especially in *Philo and **2 Baruch***) suggested that Israel was united because God was one. These texts would never have united Jew and *Gentile in one people, however, even though all the nations were admittedly joined in common humanity. Paul's language sounds closer to *Stoic philosophical language about the unity of creation (on the "body," see comment on 1 Cor 12:12). But even the common Greek rhetorical theme of concord (unity, peace) does not match Paul's emphasis on the unity that believers in Jesus share and must live out.

4:7-8. Paul adapts the text of Psalm 68:18, as ancient expounders of Scripture often did, to make his point (a later *targum of the Psalms rewords it much the same way that he does). This psalm refers to God's "going up" at Mount Sinai, as Jewish interpreters recognized, and Paul applies the principle to Jesus. (In some Jewish traditions, Moses ascended all the way to heaven to receive the *law; if Paul or any of his readers knew such traditions, it would make the application of this psalm to Jesus all the more vivid. But it is questionable how widely known this tradition was in Paul's day.) Paul's point is in harmony with the image of the psalm, although he changed its language; once a conqueror had received tribute and plunder from the defeated (as in Ps 68:18), he distributed most of these spoils to his soldiers (as here). Jesus's exaltation positions him to distribute gifts (listed in 4:11) to his people.

4:9-10. Paul interprets and applies the text just cited, the way a good Jewish teacher would. "Lower parts of the earth" probably means the realm of the dead, hence that Jesus had died (Ps 63:9; 86:13; Ezek 32:24; *Prayer of Manasseh* 13), although it could mean his descent from heaven to become a servant at his incarnation (Phil 2:7; cf. Ps 139:15).

4:11. "*Apostles" were literally commissioned messengers carrying out their sender's mission; as such, they were backed by the sender's authority to the extent that they accurately represented that commission. In the *New Testament, the term applies to commissioned agents of *Christ authorized in a special way (more authoritatively than others) to declare and propagate his will. "Prophets" were spokespersons for God, whose role was known from the *Old Testament and continued in the church; apostles were to prophets perhaps as prophetic judges (e.g., Samuel and Deborah) or seminal leaders (e.g., Elijah and Elisha) were to other Old Testament prophets—with special rank and authority.

"Evangelists," as proclaimers of good news (the message of Christ), were seen as "heralds," again a type of messenger. "Pastors" were literally "shepherds" (used for overseers in the Old Testament, e.g., Jer 23:2-4; a common image for leaders throughout the ancient Mediterranean world), elsewhere in the New Testament identified as overseers of local congregations (Acts 20:17, 28; 1 Pet 5:1-2; cf. Tit 1:5, 7); they were called to shepherd God's people, at least partly by declaring his message accurately (cf. Jer 23:18-22). "Teachers" were expounders of the Scriptures and of the Jesus tradition; if they functioned like Jewish teachers, they probably offered biblical instruction to the congregation and trained others to expound the Scriptures as well.

As in many ancient lists, some of these terms may overlap considerably (the Greek indicates an especially strong overlap between "pastors" and "teachers"). They share a common focus and basis of authority as bearers of Christ's message. The authority is resident in their message and spiritual gifting; as in the case of Jewish teachers of God's message (as opposed to the chief priests), none represents institutional authority in the sense of a supralocal church hierarchy, which is not firmly attested until the early second century (although the translocal networking of churches certainly is). Together these ministers of God's Word were to equip all God's people for their ministry (4:12-16).

4:12. The term for "training" or "equipping" was sometimes used in the Greek world to describe training or discipline, including in the work of philosophers and teachers.

4:13-16. The images of a person growing into maturity and a person in trouble as a ship being tossed about by waves were common in Paul's day. The image of growing to maturity was not usually applied to an entire community of people as here, but the point would have been no less easy to grasp. Paul's image is a generic one, lacking standard Jewish images for the end time; he may therefore refer to the church's need for maturity in general, rather than specifically predicting its completion in the end time.

4:17–5:2
Living the New Life

4:17-19. Ancient thinkers sometimes depicted moral ignorance as blinded or darkened minds. Greek writers often developed their moral exhortation by contrasting opposites, as Paul does here. Literature from this period demonstrates that most Jewish people would have described non-Jews in language similar to that which Paul uses (cf. earlier Lev 18:3, 24-30; 20:23-24; Deut 26:16-19). What is significant is that Paul refuses to call ethnically Gentile Christians "Gentiles" any longer; they may be ethnically Gentile, but they are to be *ethically* Jewish. Premarital sex, homosexual intercourse and idolatry were considered typically Gentile sins from which nearly all Jews abstained; they expected *proselytes to Judaism to reject this former lifestyle. By contrast, Greeks were raised with this lifestyle; for example, many Greek men had intercourse or affairs with boys on the verge of puberty or with adolescents. "Walk" (KJV, NASB) means "behave"; see comment on Galatians 5:16; "hardness of heart" is common in the *Old Testament (e.g., Ex 4:21; Ps 95:8).

4:20-24. The "new self" (v. 24) is literally "the new person," who is (literally) "created according to God," which means according to his image or likeness. Paul presumably alludes to

the way God originally made Adam and Eve in his image, and says that the new person that a Christian has become is equipped with moral purity because he or she is made like God morally (cf. comment on Rom 5:12-21). Thus, he points out, one should live accordingly. "Clothing" and "unclothing" provide a natural image, used in the Old Testament and Greek literature, for "putting on" and "putting off" or "removing" some kinds of behavior (Job 29:14; Ps 109:18; especially Is 61:3, 10; see comment on Rom 13:12), other attributes (2 Chron 6:41; Ps 93:1) and so forth.

Jewish wisdom writers and Greek philosophers could have agreed with Paul's emphasis on "renewing the mind"; they understood that one's attitudes and values affected one's lifestyle. They even understood conversion to Judaism or philosophy as adopting a new way of life. But Paul's basis for renewal differs from theirs; he bases it on the new kind of life available in Christ, a kind of life that most Jewish people expected only in the world to come (after the *resurrection of the dead).

4:25. Except for 4:30 and 4:32–5:2, most of Paul's moral exhortations in 4:25–5:2 are the sort that most ancient moralists uttered. Exhortations to truthfulness, labor, opposition to slander and so forth were standard. Failures in these areas are not sins attributed only to *Gentiles (cf. 4:17-19) but those with which Jewish people also struggled.

Paul's way of overcoming moral problems differs from that of other ancient moralists (4:22-24, 32), but he can find common ground with many moralists in his culture who oppose the same wrongs that he does. Despite many points in common with the ethics of his culture, however, Paul often cites the Old Testament as his ethical authority; his exhortation to truthfulness here echoes a line from the commandments listed in Zechariah 8:16-17, where one must speak truth to one another and truthfulness may be opposed to false witness in a legal setting.

4:26. The exhortation to avoid sinning while angry is from Psalm 4:4; on the wickedness of those who hold anger overnight, cf. Hosea 7:6; the *Essenes and some Greek philosophers also required that disputes be settled the same day. (For taking care of matters before nightfall, cf. Deut 24:13, 15.) Learning to speak in the most helpful way (4:29) was also stressed.

4:27. The image here might be one of warfare, and that the one who sins surrenders ground to the devil's side (cf. 6:10-20). Following the Old Testament, Jewish tradition understood the devil (*Satan, Belial) as deceiver, tempter and accuser.

4:28. Judaism valued laboring with one's hands and sharing with the poor. Although Greek artisans no doubt prided themselves in their work, the aristocracy throughout the Mediterranean world disdained work with one's hands as the duty of the lower classes.

4:29. Ancient wisdom literature often emphasized learning to speak rightly (cf. 4:25; 5:3-4); many sayings in Proverbs emphasize the idea, including the encouragement to speak gracious, uplifting words (e.g., 12:25; 15:23; 25:11; cf. Zech 1:13).

4:30. "Grieving" the *Spirit reflects a serious offense; in Isaiah 63:10 (one of only two Old Testament texts to use the title "holy spirit"), it refers to Israel's rebellion in the wilderness, which led to their rejection by God. Similarly, Israel's rebellion against the Spirit led Moses to sin with his mouth according to Psalm 106:33 (cf. Num 20:10; Deut 3:26). On "sealing" as a sign attesting that no one had tampered with the sealed merchandise or document, see comment on 1:13-14. The Ephesians must preserve their attestation for the day when their redemption would be complete (the Old Testament "day of the Lord," when he would judge the world and vindicate his people).

4:31. Vice lists were a common literary form in the writings of ancient moralists; sometimes all the vices listed pertained to a particular topic, as here (anger). Piling up related terms reinforced a point.

4:32–5:2. Other moralists, including Greek and Roman non-Christians, appealed to the imitation of God for a standard of ethics. But non-Christian writers of Paul's day could not cite the example of a god who had lovingly sacrificed himself for his people (4:32–5:2). (Some scholars have appealed to the example of the Titan Prometheus, who suffered for his betrayal of divine secrets to people. But it is not clear that Prometheus expected the severe punishment he received, and the example would not have been prominent; given the

punishment of the Titans and wounds inflicted on immortals in Greek mythology [e.g., the wounding of Ares in the *Iliad*], Prometheus cannot offer a pre-Christian parallel to the Christian idea of Jesus, who, though divine, voluntarily offered himself for humanity. Furthermore, the qualitative difference between Greek and Jewish conceptions of deity makes comparison between the stories of Prometheus and Jesus even less likely.) Earlier Scripture also urged imitation of God (Lev 11:44-45; 19:2), a theme elaborated in Jewish tradition (e.g., **Letter of Aristeas* 188, 190, 192, 208, 209, 210, 254, 281; *Philo, *Special Laws* 4.73; *Decalogue* 98, 100; *Virtues* 168; *Allegorical Interpretation* 1.48; *Sifra Qedoshim* par. 1.195.1.3).

On God's accepting someone as a fragrant aroma, cf. Ezekiel 20:41 (his saved people); Ephesians 5:2 means that God accepted Jesus as a pleasing sacrifice (see Gen 8:21; Ex 29:18).

5:3-20
More Exhortations

5:3-6. Premarital and other immoral sex, insolent speech and sexual humor were as common in ancient *Gentile society as they are in many societies today. Paul did not water down God's standards to accommodate the culture; instead he warned that those who engaged in this lifestyle would not be among God's people in the world to come. Sexual humor was highlighted, for example, in mimes used for entertainment; Paul would not have approved of finding them humorous. On vice lists and "inheriting" the *kingdom of God, see comment on 1 Corinthians 6:9-10.

5:7. Here Paul does not advocate total separatism (like that of the wilderness community of the *Dead Sea Scrolls), or even the partial separatism that Judaism's food and sabbath laws imposed on *Diaspora Jews. But many in Greco-Roman society would have branded Christians as antisocial for refusing to take part in immoral conversation and, even more, in the pervasive civic religious cults that were regarded as a mark of local loyalty.

5:8-13. Jewish texts (most prominently the Dead Sea Scrolls) often used "light" and "darkness" to contrast good and evil, and Paul milks this image here. Taverns often doubled as brothels upstairs, exploiting slave prostitutes; deeds that people wished to perform in secret were often performed at night. Some Greek religious groups known as "*mystery cults" emphasized night initiations, and some of them also developed a reputation for sexual immorality; because some Roman critics of all foreign religions associated Christians with immoral cults, Paul would have all the more reason to wish to dissociate Christianity from cults he already regards as pagan. People could enact deeds in darkness of which they would have been ashamed in public (cf. Is 29:15; 47:10).

5:14. Some commentators have suggested that here Paul cites an expository paraphrase of Scripture, like a *targum on a text such as Isaiah 60:1 or perhaps Daniel 12:2. Others think that Paul cites an early Christian *prophecy or song, composed by either Paul or another prophet (cf. 1 Cor 14:37). Also possible is a combination of the two (a prophecy or song based on biblical texts); in any case the quotation was no doubt familiar to both Paul and the letter's first hearers.

5:15-17. "Redeeming the time" (KJV, literally) probably means "making the most of the time"; cf. Psalm 90:12; **Letter of Aristeas* 256; the idea may resemble "seizing the opportunity." The *LXX of Daniel 2:8 uses the phrase for trying to gain a delay ("buying time"). (The other possible interpretation is bringing redemption to the present evil age.) That a "time of evils" would affect how the prudent behaved is also expressed in Amos 5:13. In Jewish tradition "wisdom" and "foolishness" had much more to do with morality than they did in pagan thought (e.g., Jer 29:23).

5:18. In Greek, the participles of verses 19-21 flow out of Paul's command to "be filled with the Spirit" and express the nature of *Spirit-filled living. Jewish tradition regarded drunkenness as scandalous behavior (cf. Prov 23:20-35).

Drunkenness was associated with loss of self-control and was common in the late-night banquets of the rich and the taverns of the poor. Sometimes people also associated it with a sort of inspiration, madness or possession by Dionysus, god of wine. In some settings, Dionysus's most active worshipers had a reputation for being possessed by him and performing sexual acts or acts full of sexual

symbolism (often to the distaste of conservative Romans). Being controlled by drink was a far cry from inspiration by God's Spirit.

5:19. Both Greeks and Jews commonly believed that music could come by inspiration, an idea that appears in the *Old Testament as well. Paul emphasizes the kind of worship that Jewish people celebrated in the temple (e.g., psalms and hymns); we cannot be sure whether most other Jewish gatherings, such as those in *synagogues, included the singing of psalms and hymns in this period. "Spiritual songs" may refer to Spirit-inspired songs (cf. 1 Chron 25:1-6; Eph 5:18), possibly spontaneous, which would clearly distinguish Christian worship from nearly all worship in antiquity (cf. 1 Cor 14:15).

5:20. The ancient writers (Jewish writers and some Greco-Roman, especially *Stoic, writers) who stressed thanking God for everything were those who believed that God (whether the Stoic Fate or the personal God of Judaism) ruled the course of events.

5:21-33
Wives and Husbands

The section 5:21–6:9 addresses what we call "household codes"; ancients used such codes to express what their culture regarded as virtuous relations within the family. In Paul's day, many Romans were troubled by the spread of "religions from the East" (e.g., Isis worship, Judaism and Christianity), which they thought could undermine traditional Roman family values. Members of these minority religions often tried to show their support for those values by using household codes, a standard form of exhortations developed by philosophers from *Aristotle on. These exhortations about how the head of a household should deal with members of his family often break down into discussions of husband-wife, father-child and master-slave relationships. Paul borrows this form of discussion from standard Greco-Roman moral writing. Paul is probably concerned with outsiders' views of Jesus' movement (cf. 1 Tim 5:14; Tit 2:5). But unlike most ancient writers, Paul undermines a basic premise of these codes: the male head of the house's assumption of absolute authority.

5:21. The final expression of being filled with the Spirit is "submitting to one another" because *Christ is one's Lord. All the household codes Paul proposes are based on this idea. But although it was customary to call on wives, children and slaves to submit in various ways, to call *all* members of a group (including the *paterfamilias,* the male head of the household) to submit to one another (cf. Mark 10:43-45) was unheard of. A minority of ancient writers did express the value of mutual concern and sensitivity.

5:22-24. Wifely submission remained the ideal (see e.g., *Philo, *Creation* 167; *Josephus, *Jewish Antiquities* 18.255; Marcus Aurelius 1.17.7). Most ancient writers expected wives to obey their husbands, desiring in them a quiet and meek demeanor; some marriage contracts even stated a requirement for absolute obedience. This requirement made sense especially to Greek thinkers, who could not conceive of wives as equals. Age differences contributed to this disparity: husbands were normally older than their wives, often by over a decade in Greek culture (with men frequently marrying around age thirty and women in their teens, sometimes early teens).

In this passage, however, Paul differs from the usual conventions, which normally addressed only the male head of the household. The closest Paul comes to *specifically* defining submission here is "respect" (v. 33), and in the Greek text, wifely submission to a husband (v. 22) is only one example of general mutual submission of Christians (the verb of v. 22 is borrowed directly from v. 21 and thus cannot mean something different). Note also the difference in 5:25.

5:25. Although it was assumed that husbands should love their wives, ancient household codes typically told husbands not how to love their wives but how to rule them. Although Paul upholds the ancient ideal of wifely submission, he qualifies it by placing it in the context of mutual submission: husbands are to love their wives as Christ loved the *church, by willingly laying down their lives for them. At the same time that he relates Christianity to the standards of his culture, he subverts some cultural values by going far beyond them. Both husbands and wives must submit and love (5:2, 21).

5:26. This "washing" might allude figuratively to the bride's prenuptial washing (of

course, washing was natural before any occasion on which one wished to impress another positively). After this washing the bride was perfumed, anointed and arrayed in wedding clothes. The betrothal ceremony in Judaism also came to be called "the sanctification of the bride," setting her apart for her husband. The "word" naturally refers to the saving *gospel of Christ (1:13).

5:27. After the bride's preparation (5:26), the next stage in a Jewish wedding was the bride's removal from her father's house to the groom's house, followed by the bride's introduction into the groom's home. "In glory" (NASB) or "splendor" (NRSV) also fits the image of the passage, appropriate to the bridal array (5:26).

5:28-32. Although Greek and Roman moralists sometimes alluded to the unity of husband and wife, the image was especially prominent in Judaism, which shared Paul's and Jesus' dependence on Genesis 2:24, mentioned explicitly in Ephesians 5:31. The head-body analogy of 5:23 here becomes an image of unity rather than one of authority.

5:33. Writers sometimes closed a book or section with a concluding summary; Paul here summarizes the point of 5:21-32: the wife should respect her husband, and the husband should love his wife.

6:1-4
Children and Fathers

Jewish and Greco-Roman writers unanimously agreed that children needed to honor their parents, and, at least till they grew up, needed to obey them as well. The command to honor one's parents was in the *Old Testament (Ex 20:12; Deut 5:16) and included living in such a way as to bring honor on them in a godly society (Deut 21:18-21). Many Jewish writers believed that honoring one's parents was the most important commandment. Household codes (and thus this passage) particularly addressed minor children.

At the same time, children were often taught through beating, which was standard in child rearing and education; fathers were considered responsible for their education. Paul may be among the minority of ancient writers who disapprove of excessive discipline (6:4). (Greek and Roman society was even harsher on newborn children; because an infant was accepted as a legal person only when the father officially recognized it, babies could be abandoned or, if deformed, killed. Early Christians and Jews unanimously opposed both abortion and abandonment. This text, however, addresses the discipline of minors in the household.)

6:5-9
Slaves and Masters

Household codes (see comment at 5:21-33) told the male householder how to rule his wife, children and slaves. Of these, slaves more often faced the worst abuses, though household slaves could often become free (see comment on 1 Cor 7:21-22).

The slaveholding class had various stereotypes of slaves, for example that they were lazy, especially when no one was looking. Paul encourages hard work but gives slaves a new hope and a new motive for their labor.

Given Christians' tenuous social situation (cf. 1 Tim 5:14; 6:1), Paul urges Christian slaves, like wives, to submit to the head of the household as if to Christ, but this duty is again *reciprocal.* Only a few writers in the ancient world suggested that slaves were in theory their masters' spiritual equals (cf. Job 31:13-15), and so far as we know only Paul goes so far as to suggest that in practice masters do the same for slaves as slaves should do for them (6:9).

When *Aristotle complained about a few philosophers who thought that slavery was wrong because against nature, the philosophers he cited did not state matters as plainly as Paul does here. Paul confronts the practical issue of how slaves can deal with their situation, not whether slavery should be abolished (an issue not relevant to his point in the context of household codes); almost no one discussed the question in his day. In the Roman Empire even slave revolts were meant to free particular slaves, not to end slavery, and these were brutally suppressed anyway. But the way Paul deals with the issue leaves no doubt where he would have stood had we put the question of slavery's abolition to him: people are equals before God (6:9). Apart from groups that eschewed ownership of everything, others who might have agreed with Paul in principle did not carry the prac-

tical advice as far as he (mutual submission). For more on slavery in general, see the introduction to Philemon.

6:10-20
Divine Armor

Although Paul does not follow a formal *rhetorical outline in Ephesians, 6:10-20 could resemble a *peroratio,* a rousing conclusion to his case. Philosophers and other speakers sometimes described their conflict with wicked ideas as wrestling in an athletic contest or a war; they also used lists of virtues, the general idea of which Paul incorporates here. Some compare aspects of Paul's conclusion to the exhortations that generals gave to their armies before battle.

The *Old Testament has many pictures of Israel as God's warriors, and God himself appears as a warrior in full armor, dealing out his justice (Is 59:17; cf. Wisdom of Solomon 5:17-20). But although Paul borrows his language from the Old Testament, the image Paul's words in this paragraph would have evoked for most of his hearers is that of a Roman soldier ready to do battle. Most adults who heard his letter read would have seen Roman soldiers and could relate this image to their spiritual warfare against the demonic powers at work in the world; God who fought for them had supplied them his armor.

Paul omits some pieces of the Roman soldier's armor in his description; for instance, since he mentions only one offensive weapon, he uses the sword but omits the lance (the *pilum*) and dagger. (Usually soldiers had two *pila;* they could imbed the first into an enemy shield, making it unwieldy, and then strike with the second.) Paul probably has no particular purpose in correlating specific strengths of the Christian with specific armor body parts (cf. 1 Thess 5:8); rather, he wants his readers to know that they need all these strengths to be victorious.

6:10-11. Ancient exhortations regarded retreat and wounds in the back as disgraceful (note that none of the following armor covers the back). In the day of battle, Roman soldiers were to stand their ground, not retreat. As long as they stood together on a flat, open field and did not break ranks, their legions were considered virtually invincible.

6:12. Some people in the Old Testament learned that the nature of their battle was spiritual (cf. Gen 32:22-32; Dan 10:10-21), although in both Daniel and Paul the battle was fought by prayerfully submitting to God and doing his will, not by directly addressing the hostile powers in the heavens (Dan 10:12-13, 21). Some pagan deities were called "world rulers," and terms for high ranks of good and evil angels were becoming popular in this period (see comment on Eph 1:21-23); "spiritual beings of wickedness" is idiomatic Greek for "evil spirits," a Jewish and *New Testament term.

6:13. The "evil day" could refer generically to any time of judgment or testing (cf., e.g., Amos 5:13; 6:3; 2 Maccabees 1:5; Sirach 51:11-12; Eph 5:16), though some scholars think it applies specifically to the period of intense tribulation Jewish people expected prior to the end of the age (cf. Dan 12:1), which some scholars believe Paul elsewhere regarded as present (cf. Rom 8:22-23). For "stand," see comment on 6:10-11.

6:14. The "belt" or "girdle" may refer to the leather apron beneath the armor or to the metal belt over the tunic protecting the lower abdomen. The "breastplate" normally consisted of leather overlaid with metal, and it protected the chest in battle; like the helmet (6:17), it was used only in battle, not for normal wear. Roman soldiers were to face forward in battle, side by side, so the armor needed to protect only their front. In view of Isaiah 59:17 (cf. Wisdom of Solomon 5:18), this "breastplate of righteousness" is truly "God's armor" (6:13).

6:15. Soldiers needed to wear sandals or boots (technically the Roman *caliga,* a half boot) so they could advance toward the enemy undistracted about what they might step on; this gear was essential to their "preparation" for battle. Paul takes the image especially from the herald of Isaiah 52:7 who announces good news: sharing the message of *Christ advances God's army against the enemy's position.

6:16. Roman soldiers were most commonly equipped with large rectangular wooden shields, four feet high, the fronts of which were made of leather. Before battles in which flaming arrows might be fired, the leather would be wetted to quench any fiery darts launched against them. After Roman legionaries closed ranks, the front row holding

shields forward and those behind them holding shields above them, they were deemed virtually invulnerable to any attack from flaming arrows.

Because the Greek and Roman god of passion (called Eros and Cupid, respectively) was said to strike with flaming arrows, some of Paul's readers may have thought specifically of the temptation of sexual desire in this verse, although Paul probably intended the image to cover more than that danger (cf. Ps 11:2; 57:4; 58:3-7; 64:3; perhaps 120:1-4; Prov 25:18).

6:17. The bronze or iron helmet, equipped with cheek pieces, was necessary to protect the head; though essential garb for battle, it was normally not worn outside battle. For the phrase "helmet of salvation," see Isaiah 59:17; cf. comment on Ephesians 6:14. The double-edged sword (*gladius,* 20–24 inches long) was a weapon used when close battle was joined with the enemy and the heavy pikes that frontline soldiers carried were no longer practical. Thus Paul implies that the battle is to be joined especially by engaging those who do not know God's word (the *gospel) with its message, after one is spiritually prepared in the other ways listed here. Paul's ministry was thus particularly strategic, because it included close-range battle advancing into enemy ranks (vv. 19-20).

6:18-19. It is not clear that prayer for one another (v. 18) continues the figurative image of warfare in the preceding context, but if it does it might relate to how the soldiers had to stand together in their battle formation, covering one another by moving as a solid unit. A Roman soldier by himself was vulnerable, but as a unified army a Roman legion was considered virtually invincible. "Watching" or "being alert" may also be military language (suggested by Jesus; cf. Mk 14:38). Prayer in the *Spirit probably implies *inspired* prayer (cf. 1 Cor 14). In Greek, the alliteration of multiple *p-* words could appeal to Paul's hearers as rhetorically sensitive.

6:20. Ambassadors were to be received with all the respect due the ones who sent them; as heralds, they were to be immune from hostility even if they represented an enemy kingdom. Paul, an "ambassador" of the greatest king and the greatest *kingdom (6:20) is instead chained in Rome for his mission of peace (6:15). In Greek literature, a true philosopher was characterized by his "boldness," or frank speech.

Like 3:1-13, this section adds *pathos,* or feeling; although its most important function is to solicit prayer, it also sets an example for the *church. Chains were normally deemed a mark of great shame.

6:21-24
Closing Greetings

6:21-22. Mail and other news were normally carried by travelers, because the Roman Empire had no official postal service except for imperial business.

6:23-24. The *Old Testament promised God's covenant love to all who loved God (Ex 20:6; Deut 5:10; Neh 1:5; Dan 9:4; cf. 1 Kings 8:23); here the promise applies specifically to those who love the Lord Jesus Christ.

Philippians

Introduction

Authorship. Given the personal allusions and style, the vast majority of *New Testament scholars accept Philippians as an authentic letter (or letters) by Paul.

Unity. Some scholars have divided Philippians up into smaller units (more common in the past than today). The division of Philippians is not impossible: short letters were often sent in antiquity, and Paul maintained regular contact with the Philippians. Conversely, letters often had multiple subjects, especially when they were as long as Philippians. Two factors ultimately support the letter's unity: (1) the burden of proof is on those who would divide it, because different letters are usually distinguishable in letter collections; (2) the arguments for division are based on modern letter-writing conventions that overlook ancient *rhetorical and epistolary conventions.

Structure. Chapter 1 addresses topics of Paul and the Philippians' common labor in the *gospel (using motifs from ancient friendship letters). Chapter 2 provides models for imitation (in which he includes letters of recommendation). Chapter 3 includes a *digression (common in ancient letters). Chapter 4 turns to the main business of the letter (a thank-you note eager to avoid any suggestions of the common ancient *patron-*client ideology).

Situation. Paul states that the purpose of Philippians is to thank them (4:10-20); but writing from prison (probably in Rome, as a majority of scholars think), he also wishes to address some other issues, including the likely further persecution the *church will face and an exhortation to work together. As much as the Philippian church (probably made up of several house churches) loved Paul, its members were divided among themselves; thus the recurrent exhortations to unity (1:27; 2:2, 14) and mutual service (2:3-11). Exhortations to unity were commonplace in antiquity, but usually corresponded to genuinely present and no less common divisions. At least part of the division here revolves around disagreement between two of Paul's fellow laborers, possibly leaders of separate house churches (4:2-3). If opposition to Paul exists, it probably involves Jewish Christians who advocate circumcision, if Paul believes they have already arrived in Philippi (3:2-21).

Commentaries. Useful commentaries for background include Gordon D. Fee, *Paul's Letter to the Philippians,* NICNT (Grand Rapids: Eerdmans, 1995); Gerald F. Hawthorne, *Philippians,* WBC 43 (Waco, TX: Word, 1983); and Ben Witherington III, *Paul's Letter to the Philippians: A Socio-Rhetorical Commentary* (Grand Rapids: Eerdmans, 2011). On a less technical level, see, e.g., Ben Witherington III, *Friendship and Finances in Philippi* (Philadelphia: Trinity Press International, 1994).

1:1-2
Introduction

1:1. The title "servants" is not necessarily demeaning in either a Jewish setting (the prophets had been called "servants of God") or a Greco-Roman one (slaves of the emperor and other high officials wielded far more power than independent free persons). On "overseers" and "deacons," see comment on 1 Timothy 3:1, 8, where these terms also occur together. Some letters opened by naming multiple authors, yet continued as if written only by the first one (e.g., *Cicero, *Letters to Friends* 16.11.1).

1:2. Paul here Christianizes a customary ancient greeting form (see comment on Rom 1:7).

1:3-11
Thanks to God for the Philippians

Thanksgivings were common in ancient letters; Paul is particularly fond of them, omitting them in congregational letters only to the Galatians, and there for obvious reasons.

1:3-4. Jewish language sometimes connects prayers with "memorials" or "remembrances" before God (as in Rom 1:9); here Paul may mean that he thanks God during his regular prayers for the Philippians (cf. Phil 4:6). Letter writers often remarked that they had joy when thinking of or hearing about the recipient.

1:5. The term translated "participation" (NASB) or "partnership" (NIV) was often used in an economic sense for those who "share" (cf. NRSV) monetarily. Here it includes the financial help the Philippians have given (4:10-20).

1:6. "Day of *Christ Jesus" adapts *Old Testament language for the "day of the Lord," and so assumes that Christ is divine. Writers or speakers of exhortations or requests often expressed confidence that the recipient would do well; Paul's confidence in their perseverance is based on 1:5, 7.

1:7. Letters of friendship often mentioned sharing one another's feelings (including sorrows). Given his imprisonment and legal situation, Paul also naturally uses language common in legal proceedings: the "defense" and "confirmation," or vindication, acquittal. His situation was relevant to their own (see comment on Phil 1:19). People often abandoned their friends if the latter were imprisoned or otherwise shamed, but loyalty was respected.

1:8. Letters of friendship often displayed affection and mentioned the writer's longing for his friends. Ancients commonly called on a deity as a witness, assuming the deity's knowledge; to lie under such conditions was to invite the deity's wrath.

1:9-11. As Paul does here, philosophers also stressed the need to discern what was good from what was bad. On the source of "righteousness" (v. 11), see also comment on 3:9.

1:12-26
The Profit in Hardship

Greek philosophers typically declared that neither imprisonment nor death mattered; only one's attitude did. Paul partly agrees with this view but for very different reasons: God's sovereign use of hardship for his glory (1:12-14, a Jewish and *Old Testament belief) and the superiority of undistracted devotion to Jesus (1:21, 23). Letters often filled in readers on recent news; public documents and speeches usually included a *narrative component leading up to the circumstances of writing.

1:12. *Stoic philosophers argued that imprisonment, like death, was not a bad thing; Jewish faith recognized that God was sovereign even in sufferings (cf., e.g., Joseph's imprisonment).

1:13. Some commentators have suggested that "palace" or "praetorium" here may refer to a provincial governor's residence, such as the place of Paul's detention in Caesarea (Acts 23:35); Paul was often detained (2 Cor 11:23), and a detention in Asia or in Syria-Palestine would clarify the presence of so many helpers in Colossians 4:10-15. Others, taking "Caesar's household" (4:22) literally, think that "praetorium" here refers to detention in Rome by the "praetorian guard" (NASB), as in Acts 28:16; the centrality of Rome in the empire attracted many people, which could account for the presence of the ministers in Colossians 4:10-15. No army was allowed in Italy, but the Praetorian Guard consisted of several thousand free Italian soldiers in twelve cohorts of as many as a thousand each. They were the emperor's elite bodyguard under the praetorian prefect. Viewed as *clients of the emperor

(thus part of his extended household), they were kept loyal with the highest pay in the Roman military; they were also kept loyal by the leadership of a prefect who could never legally become emperor (being a knight rather than a senator).

1:14-17. Despite the disapproval of some philosophers, competition for honor was a central value for men in much of society, including, conspicuously, Rome and its colonies. Jewish teachers allowed that serving God from impure motives was better than not serving him at all. They also unequivocally insisted, however, that those who used the *law only for their own gain would not share in the world to come. Ancient writers and speakers sometimes outlined alternatives (1:15) before elaborating them (1:16-17).

1:18. "What then?" was a common phrase for furthering an argument or transitioning to a conclusion. One could repeat a word or phrase for emphasis (thus here Paul's rejoicing, though he varies the verb tense and voice; ancient hearers also appreciated variation).

1:19. "This will turn out for my deliverance" precisely echoes Job 13:16 in the *Septuagint, although Paul, unlike Job, sees God as his defender here. "Salvation" (KJV) often meant physical "deliverance," sometimes from prison, and in this context it must have this meaning. Not all residents of Philippi were citizens, but those who were Philippian citizens (who would often be the most prominent members of the *church) were also Roman citizens (see comment on 3:20) and as such enjoyed certain legal protections. Paul's fate in court as a Christian who was also a Roman citizen would set a legal precedent that could affect their own legal standing, so they would have more than one reason for concern about how his case turned out.

1:20-23. Ancient speakers sometimes contemplated their options in front of their audiences (though the choice here is not really Paul's). Philosophers often argued that death was neutral, not evil; it was either annihilation or the migration of the soul from one place to another. They contended that it could be either advantageous or not, and that one could choose accordingly. Paul sees death as an evil (1 Cor 15:26) and not something to be chosen, but also, when it comes in God's plan, as a way to pursue *Christ undistracted (2 Cor 5:4-10). Most Judeans emphasized the future *resurrection of the bodies of the righteous but believed that the souls of the righteous dead were meanwhile in heaven with God; Paul agrees with them. Many Greco-Roman writers expressed a desire to die and so be free from sufferings; Old Testament writers did not usually take this position (Ps 30:9), but some became discouraged enough to express this sentiment (1 Kings 19:4), or even to wish that they had never lived (Job 3:1-19; Jer 15:10; 20:14-18).

1:24. Ancient thinkers sometimes argued that one should use reason to determine whether it was more profitable to die or to continue to endure suffering for the good one could accomplish (e.g., *Cicero, *Letters to His Brother Quintus* 1.3.1-2; Pliny, *Epistles* 1.22.9-10). Although Paul's death, if it happened, would not be voluntary, he reasons nonetheless; his remaining would help them by virtue of his continuance as a teacher, and perhaps also for legal precedent: see comment on 1:19. Speakers commonly cited "necessity" as a reason for a choice; a writer who affirmed that he clung to life for another's sake (Phil 1:24) thereby also demonstrated love for them (e.g., *Seneca, *Epistle to Lucilius* 104.2-3; Fronto, *Ad M. Caesarem* 5.33/48).

1:25-26. "Progress" was commonly used for educational or moral advancement. (Although Stoics viewed people as either perfect or not, according to ideal types, on the practical level even they emphasized "progress" toward virtue.) Nero was not particularly interested in legal questions, and in A.D. 62 he freed Jewish prisoners that the procurator Felix had previously sent him (Josephus, *Life* 16). Paul was likely released at this time (see comment on Acts 28:30-31).

1:27-30
Endure in Hope

1:27. "Conduct yourselves" uses Greek terminology sometimes applied to a citizen in a free state (cf. 3:20), language that Jewish writers used to describe their people obeying God's *law (as in Acts 23:1; 2 Maccabees 6:1; *3 Maccabees 3:4; *4 Maccabees 2:8; 5:16). On the athletic image (here undoubtedly implied in the Greek word that KJV and NASB translate "striving together"), see comment on 1:30. Ex-

hortations to unity commonly included calls to be "of one mind" or the like.

1:28. The confidence that Paul suggests here alludes to the *Old Testament and Jewish hope that God would destroy his people's enemies in the end time but vindicate and save his people. Cf. Wisdom of Solomon 5:1-2; Baruch 4:24-25.

1:29. Although Jewish people sought to avoid persecution when possible, they extolled the martyrs who preferred death to disobeying God. (One could perhaps distinguish public attitudes, such as praise for past heroes, from personal attitudes, such as the price individuals paid in daily life for their convictions. In the case of Paul, however, he was daily confronted with the personal choice and in his own life modeled commitment to the point of martyrdom.) Paul regards suffering for Christ as a privilege (cf. similarly Acts 5:41). The idea of sufferings indicating the nearness of the end (as in Jewish thought) might also be present here.

1:30. Although the term had also developed a more generic use, Paul probably applies the language of ancient athletic competitions ("contest" or "conflict"—KJV, NASB) to the life of the moral person, as do many Greek moralists. Here the issue is persecution; on the Philippians' sharing in Paul's fate, see comment on 1:19.

2:1-11
Be Servants Like Christ

Paul continues his exhortation of 1:27-30, advocating unity (1:27) and fearlessness in the face of martyrdom's reward (1:28; 2:9-11; cf. 3:20-21). Ancient moral writers often adduced examples to prove their points, and Paul here adduces Jesus (2:5-11), himself (2:17-18), Timothy (2:19-24) and Epaphroditus (2:25-30). Correspondences between 2:6-11 and 3:20-21 indicate the extent to which Paul uses *Christ as a model for believers here. (The majority of scholars accept Phil 2:6-11 as a pre-Pauline hymn, based on the structure and language of the passage. Others point out that Paul could be responsible for the hymnic features himself. Greek authors peppered their writings with quotations from Greek poetry, and Paul's use of an earlier Christian hymn is possible, although it cannot be regarded as proven. Despite its *rhetorical patterns, the material need not be a hymn per se; ancient writers and speakers often used exalted prose, sometimes even with rhythm, to describe deities.)

2:1-4. Competition for honor was heavy in Roman society, a behavior if anything more pronounced in Philippi. Paul borrows language commonly used in Greek *homonoia* speeches, which advocated harmony and unity among the hearers. Most philosophers advocated preferring the larger good to one's own. Jewish teachers also had maxims such as, "Value your fellow's honor no less than your own" (cf. Mishnah *Avot* 2:10; *Avot of Rabbi Nathan* 15, 19 A; 29, §60B). One could urge a person to act on the basis of affection, e.g., sometimes for the exhorter (Fronto, *Ad M. Caesarem* 5.1: "If you have any love at all for me . . . ").

2:5-6. Some intellectuals urged being of "one mind" with the gods, having the correct, divine perspective. Some scholars suggest that Christ's being in the "form of God" alludes to Adam being formed in God's image (Gen 1:26). Unlike Adam, who being human sought divinity (Gen 3:5), Jesus, being deity, relinquished his rightful position of honor. Also and probably even more to the point here is that Jewish texts described divine Wisdom as the perfect, archetypal image of God ("form" may mean "role" more than "image" here; cf. 2:7b, "form of a servant," although this phrase parallels "likeness" in 2:7c; cf. comment on Col 1:15). (One might contrast Jesus' voluntary surrender of status with the emperor during Paul's time, Nero, who aspired to divinity.)

2:7. The "servant" of Isaiah 53 also was "poured out" or "emptied himself," though not in incarnation but in death (Is 53:12; cf. Phil 2:8). (Paul uses a more specific Greek word for "slave" [so NRSV] here than appears for the servant in the *LXX of Isaiah 53; elsewhere, however, cf. Is 49:5, 7.)

2:8. Judaism prized obedience to the point of death in stories about its martyrs. Crucifixion was the most degrading form of execution, reserved for non-Roman criminals who were slaves or free persons of the lowest status. Writers and speakers sometimes repeated a word (here "death") to reinforce the point.

2:9. Some commentators have seen in the language of this verse an allusion to the exaltation of Isaiah 52:13. If, as is likely, that verse

refers to suffering more than glory (Is 52:14–53:11), Paul either does not refer to it here (the term in Isaiah is very common in the *Septuagint) or *contrasts* the exaltation accomplished by God with the suffering Jesus experienced among people.

2:10-11. Isaiah 45:23 ("every knee will bow . . . every tongue will declare") refers to the final submission of all nations to God; that Paul applies the text to Jesus (especially with an *Old Testament divine title, "Lord," in v. 11) is telling. Those "in heaven" would include the angels, probably including the rebellious angels who rule the *Gentile nations (see comment on Eph 1:21-23). Greeks worshiped gods in the heavens, earth, sea and underworld; traditional Greek mythology also placed the shadowy existence of departed souls in the underworld. Paul announces that whatever categories of beings there are, they must acknowledge Christ's rule, because he is exalted above them. One often bowed the knee in obeisance before a ruler or deity.

2:12-16
Live Right

Paul here continues his exhortation to the believers to live in unity (2:1-11).

2:12-13. Letters were often used as proxies for one's presence; Paul thus entreats the Philippians through the letter to obey his teaching as if he were present. They secure their ultimate "salvation" by persevering together (see 1:27-28). The reward of this obedience is implied by the parallel with Jesus' obedience in 2:8-9. The teaching that they are enabled to obey by God's power is at best rare in pre-Christian literature outside *Old Testament teachings on the *Spirit; see comment on Galatians 2:19-20. "Fear and trembling" appear together often in the Old Testament and Jewish sources (cf., e.g., Ps 55:5; *4 Maccabees 4:10; **1 Enoch* 14:13).

2:14. "Grumbling" and "disputing" (NASB) had characterized Israel in the wilderness and were condemned in the Old Testament; philosophers who emphasized the wisdom of the gods did not approve either. See comment on 1 Corinthians 10:9-10.

2:15. "Crooked and perverted generation" closely echoes Deut 32:5, which complains that rebellious Israelites are not God's children; here, by contrast, believers are God's children. Jewish tradition often compared the righteous with "lights" in a dark world; cf. especially Daniel 12:3 (the term Paul uses here was especially applied to heavenly bodies, reflecting an image like the one Daniel uses).

2:16. The "day of Christ" is modeled after the Old Testament "day of the Lord" (see comment on 1:6). The expression "labor in vain" was not uncommon; on athletic metaphors, see comment on Phil 1:30; 3:12-14.

2:17-24
The Examples of Paul and Timothy

Paul continues to model the servant lifestyle by examples.

2:17-18. Israel had drink offerings (e.g., Lev 23:18, 37), and other ancient religions also regularly poured out libations to the gods, usually wine but sometimes water or another substance. *Gentiles also poured libations at the beginning of banquets and could pour them in memory of person who had died. Paul is being poured out (cf. 2:7) as such a "drink offering" to the true God, a willing offering on their behalf that joined their own sacrifice.

2:19. Travelers regularly carried news and letters.

2:20-21. Both Greek philosophers and *Old Testament prophets complained about the scarcity of those fully devoted to the cause. Paul offers many "letters [or passages] of recommendation," a common ancient form of writing (see comment on Rom 16:1-2), but he places Timothy, his special emissary, in a category by himself, offering the highest commendation. Those writing letters of recommendation often offered such superlative praises (occasionally for more than one person). Thus *Cicero can claim, "There is no one like him" (e.g., *Letters to Friends* 13.1.5; 13.18.2; 13.26.1); or "This is the most special recommendation" (*Letters to Friends* 13.32.2; 13.34.1; 13.35.1).

2:22. Messengers were often sent as personal representatives, to be received with the same honor accorded the sender (e.g., 2 Sam 19:37-38). Teachers and *disciples often developed an intimate relationship described in terms of "father" and "son."

2:23. News was difficult to send, because it had to be carried by an available traveler and

otherwise by a messenger—a sometimes dangerous undertaking given travel conditions at various times of the year (cf. 2:30). Paul therefore wants to wait until he can give a full report of the outcome of his trial.

2:24. Letters were used as surrogates for one's presence but also often announced one's coming.

2:25-30
Epaphroditus's Sacrificial Service

People often wrote letters of recommendation, often supporting the carrier; Paul includes this recommendation in his larger letter. Epaphroditus had been the Philippians' messenger, bringing their gift to Paul in prison (4:18); he no doubt carried Paul's letter back to them. Travel conditions were dangerous and harsh, especially at sea in late fall and early spring, and these conditions decreased one's resistance to antiquity's many diseases (vv. 26-27). Because "Epaphroditus" is a common name, no firm conclusions about his ethnic origin may be drawn from it, but the context suggests that he was from Philippi. Soldier metaphors (2:25) appear elsewhere, and military images were common (see comment on Rom 13:12).

People often reported on theirs or others' health in personal letters, as well as expressing concern for others' health. We cannot know the cause of Epaphroditus's ill health, but malaria, for example, was very common, and typhoid existed. *Gentiles prayed to their gods for healing (especially certain deities associated with healing, most notably Asclepius); Jewish people prayed to and praised the true God as the healer of body as well as the forgiver of sin. Jewish prayers for healing were sometimes described as prayers for "mercy." "Risked" (in "risked his life," v. 30) was often used as a gambling term, and some scholars have noted that gamblers invoked Venus, goddess of gambling, with the term *epaphroditus;* on this view Paul could be making a wordplay on his friend's name. Although God usually healed those in the Bible who prayed to him, his activity could not be taken for granted; even some of his most faithful servants had died from sickness (2 Kings 13:14; cf. 1 Kings 1:1; 14:4).

3:1-16
Righteousness Not from Human Works

The section from 3:1 to 4:1 is a *digression. Some scholars have suggested that it was a different Pauline letter accidentally inserted into the middle of Philippians (though in papyri such accidents must have been extremely uncommon), or one combined with several other Pauline letters to the Philippians. But digressions were common in ancient speaking and writing, and literary connections with the rest of the letter strengthen the suggestion that it is part of a unified letter.

3:1. The expression often translated "finally" here sometimes indicated the end of a letter (cf. GNT: "in conclusion"), but just as often functioned as a transition device within a letter (cf. 1 Thess 4:1; 2 Thess 3:1; cf. *Testament of Reuben* 5:5). (Less relevantly, "ending" twice also could fit the casual nature of some letters; cf., e.g., apparent plans to end in Pliny, *Epistles* 3.9.26-27, 37; *Seneca, *Epistle to Lucilius* 119.9, 16.) One might also say again a point that bore repeating (and even say so, e.g., *Cicero, *On Friendship* 22.85). Reminders were common in moral exhortation.

3:2. The threefold repetition of "beware" is *rhetorical *anaphora*, opening repetition to highlight a point. The opponents here are not Jewish persecutors, who would be unlikely in Philippi, which apparently had a very small Jewish community (cf. Acts 16:13). Rather, they are like the traveling Jewish Christian teachers Paul had encountered in Galatia who want to circumcise *Gentiles. Scholars debate whether they have already visited Philippi or are simply traveling about; if the latter, Paul is warning that they may come there.

"Dog" was a familiar insult, sometimes implying dogs' vulgar public sexual, excretory or (cf. 3:8, 19) dietary habits. *Cynic philosophers were regularly called "dogs," but given the specific error Paul refutes in this passage, he clearly does not use it as a reference to these philosophers; that use merely illustrates to what a great extent the term was one of disdain. Philosophers called those ruled by passions "beasts." Probably more to the point, Jewish teaching considered dogs unclean and sometimes sexually immoral; the *Old Testament

might apply the title to male cult prostitutes (Deut 23:17); especially to enemies in Psalm 22:16. Such a title would certainly make the pietists who were demanding circumcision recoil. There were "beware of dog" signs even in ancient Rome, where they were pets and watchdogs (*Petronius, *Satyricon* 29), no doubt reinforcing the biting sarcasm of Paul's phrase. Here Paul uses another word for "circumcision" (NASB), which means "mutilation" (NIV, NRSV; cf. the *LXX of 1 Kings 18:28); see comment on Galatians 5:12 for the cultural significance of this idea. Plays on words were common; cf. mutilation (*katatome*) here and circumcision (*peritome*) in 3:3.

3:3. Paul says that spiritual circumcision (Deut 10:16; 30:6; cf. Lev 26:41; Jer 4:4; 9:25-26) is what really matters to God. Because ancient Judaism usually associated the *Spirit with *prophecy, "worship in the Spirit" (NASB, NRSV) may refer to charismatic worship of the sort depicted in 1 Chronicles 25:1-6; because most Jewish people believed that the Spirit was no longer available in that fullness in their own time, Paul lays claim to an experience for the *church that confirms the *Messiah's arrival and that most of his Jewish contemporaries (possibly excepting other "fringe" groups such as the *Qumran sectarians) would not pretend to match.

3:4. Lists of virtues or vices were common in epideictic (praise and blame) speeches, and in *narrative form they characterized epideictic biographies. Self-commendation was considered appropriate if one were defending oneself or using oneself as a legitimate model for others. By claiming to have greater merit than his opponents even on their own terms, he turns this self-commendation into an occasion to undermine them; professional speakers and writers often used the standard rhetorical technique of "comparison" to accomplish this end.

3:5. Gentile lists of praises (cf. Menander Rhetor 2.3, 385.5-9) could begin with nature and nurture (cf. Phil 3:5) and proceed to accomplishments and actions, the latter including the four cardinal virtues (which included justice; cf. 3:6). Gentile lists of a person's virtues typically included items such as noble birth or beauty as well as character traits like prudence or steadfastness. Those born Jewish males were circumcised the eighth day; by this virtue Paul eliminates any competition from *proselytes converted by his opponents later in life—in practice proselytes had lower social status in Judaism than those born Jewish. "Hebrew of Hebrews" could indicate a Palestinian Jewish origin, although this is not clear; however, that Paul lived in Judea before his conversion is clear from the fact that he was a *Pharisee (in Acts, cf. comment on 22:3). Although Pharisaic piety was known elsewhere, Pharisees themselves seem to have lived only in Palestine and been concentrated around Jerusalem. They were noted for being the most meticulous observers of the *law—something Paul's opponents now claimed to be.

3:6. "Zeal" for the law did not always or necessarily include violence, but the chief models for such zeal included Phinehas (Num 25:7-13) and especially the *Maccabees, and Jewish patriots called themselves "*Zealots" in the war against Rome not long after Paul wrote these words. By defining his legalistic righteousness in terms of his persecution of Christians, Paul associates his opponents' position of "zeal" for the law with opposition to the Philippian Christians' faith.

3:7. Appealing to the Christian faith shared by himself, his readers and (according to themselves) even his opponents, Paul dispenses with his worldly credentials—and thus the only credentials to which his opponents could lay claim at all; see comment on 2 Corinthians 11:16-18. "Gain" (or "gains"—NIV; or "profit"—GNT) and "loss" are marketplace terms, like other terms later in the letter (4:10-20); Paul had to sacrifice all his former spiritual assets to follow Christ, who was what really mattered.

3:8. "Dung" (KJV) or "rubbish" (ESV, NASB, NRSV; "garbage"—NIV) usually meant either excrement or food to be thrown away, which dogs might enjoy (3:2). (Ancient speakers valued skill in producing insolent insults.)

3:9. As in 3:6, the problem is not the law but that the righteousness is Paul's own, hence inadequate. Both biblical psalmists and later Jewish ones whose hymns appear in the *Dead Sea Scrolls waited on God for their vindication or acquittal, and Paul likewise had to receive his justification, or righteousness, from God alone, but Paul understands that this is found in Christ.

3:10. The ultimate revelation in the Old Testament was to "know" God (Ex 33:13), a relationship available to all the people of the new covenant (Jer 31:34). This language reflects both the covenant relationship (on the corporate level) and intimate fellowship with God (on the personal level experienced by the prophets). But Paul also connects knowing *Christ with sharing his sufferings and glory. On the imitation of God, see comment on Ephesians 5:1.

3:11. The ultimate sharing of Christ's *resurrection occurs at the future resurrection of the righteous (in which most Jews believed). Many Jewish people believed that a period of sufferings would precede the resurrection, and this seems to be Paul's view as well (clear in Rom 8:18-22), though Paul speaks here of his own sufferings (Phil 3:10-11).

3:12-13. In the language of athletic competition—often used metaphorically by ancient moralists (e.g., *Epictetus, *Discourses* 2.17.29; Diogenes Laertius 6.2.34) and Greek-speaking Jews (e.g., **Testament of Job* 4:10; *Josephus, *Against Apion* 2.217-18)—Paul describes his striving for the future hope of 3:11. Greco-Roman sages generally admitted that they were not yet "perfect" (in contrast to the *ideal* sage) but were making progress. Nevertheless they sometimes spoke of themselves as the "mature," the wise, as opposed to those who were still novices. (Older commentators note that the *mystery cults described the highest stage of initiation as "perfection" or "completion," but this is probably less relevant here than the language of sages.) "What is behind" (NIV) belongs to Paul's image of the race; to win, one must keep one's eyes on the finish line; Greek runners often ran in a straight line and back.

3:14. At the end of each race, officials had their heralds proclaim the winner and call him up to receive his prize (in the Olympic games, a palm branch). ("Above" or "upward" also alludes to Christ in heaven, 3:20; cf. Col 3:1-2.) In Paul's metaphor, the prize is the full revelation of Christ at the resurrection (3:10-11).

3:15. In philosophy, those who were advanced in learning, as opposed to novice students, could be described as "mature" (NIV, NRSV; "perfect"—KJV, NASB). (This was, however, mostly "in principle"; *Stoics depicted the ideal so starkly that even sages did not claim to have attained it themselves.)

3:16. Although not looking back to one's past (3:13) and not yet complete (3:11-12), they were to maintain what they had already achieved. "Live" here can mean "walk" (KJV) or "keep to a straight line"; possibly here Paul adapts his race metaphor from 3:12-14 (races were often in straight lines and back), although this is by no means certain.

3:17–4:1
Judgment and Salvation

Teachers like Paul would make it to the *resurrection of the righteous by staking their righteousness on nothing but Christ (3:9-11); his opponents, however, like dogs interested in dung (3:2, 8), were headed for destruction, as were those who followed them (3:18-19).

3:17. *Disciples often learned by imitating their teachers; examples were important for learning. (Paul had given four examples, using himself for one, in chapter 2, and again used himself in 3:4-14.)

3:18. Displays of emotion were considered appropriate in public speaking, both expressions of outrage (3:2) and "weeping," which often invited audiences to feel the same. Letter writers could also mention their tears (e.g., *Cicero, *Letters to His Brother Quintus* 1.3.3; Pliny, *Epistles* 5.21.6). "With tears" (NIV, NRSV, GNT) or "weeping" (KJV, NASB) indicates his love for his opponents.

3:19. Greco-Roman philosophers and non-Palestinian Jewish writers (especially Philo) repeatedly railed against those ruled by their passions, often remarking that they were ruled by their "belly" (KJV, NRSV) or their (sexual or culinary) "appetite" (NASB), disdaining their neglect of eternal things. Gluttony especially became part of Roman culture, and its practice by the aristocracy was a frequent butt of satirists' humor. But being ruled by one's "belly" meant more than gluttony; it was used to mean any fleshly indulgence (cf. "bodily desires"—GNT). This would be a serious insult to those who thought they were zealous for the *law (*Diaspora Jews emphasized how the law enabled them to master passions); but Paul had already "shamed" their "glory" by his own example in 3:4-8.

3:20. Citizens of Philippi, a Roman *colony,

were automatically citizens of Rome, sharing all the rights and privileges of Roman citizens even though most of them had never been there. (Not everyone who lived in Philippi was a full citizen of Philippi, but the citizenship held by some of the church, especially owners of many or most of the homes in which it met, would raise the status of the whole movement there.) Paul's readers in Philippi therefore understand quite well what it means to be citizens of the supreme city while not yet living there. Philosophers sometimes declared themselves citizens of the world rather than any mere city-state. Citizenship in heaven was more important than descent from a tribe in Israel (3:5). ("Citizenship" is not "conversation," as in the KJV.)

Many deities in Philippi were called "*saviors," as was the emperor; although this title for Jesus derives from *Old Testament language for God (e.g., Is 45:21), it provides a stark contrast with the paganism Christians outside greater Judea had to confront daily.

3:21. Paul's view of the *resurrection is that it involves the body, but one distinct in nature from the current body (Greek culture considered the idea of a bodily resurrection vulgar superstition, but many Jews valued the whole person; see comment on 1 Cor 15). Many Jewish conceptions of the resurrection body differed from the current body (cf. Dan 12:2-3). As in Judaism, the resurrection occurs at the time of the ultimate battle, when God subordinates all his enemies (cf. also 1 Cor 15:25-28).

4:1. Letters often expressed longing to see the recipient in person. That the Philippians are Paul's "crown" indicates that they are in some sense his prize (potentially fitting his recent athletic metaphor; cf. 3:14; 1 Thess 2:19 and comment on 1 Cor 9:24-25). They must stand firm against Paul's opponents and persevere if Paul is to receive the reward he seeks for his labor for them—their salvation. There were different sorts of crowns. Heroes could be rewarded with public crowns, but the term applied especially to athletes' wreaths; Judaism also used the image for rewards at the end time.

4:2-9
Work Together

Moral writers often strung together short, unrelated statements of moral advice. Paul similarly lists several admonitions in 4:4-9 here, although a common theme runs among them.

4:2. "Euodia" and "Syntyche" are Greek names; because Philippi was a Roman *colony, their Greek names might indicate that they are foreign merchants like Lydia (Acts 16:14; see comment on Acts 16:21), although this is only a surmise (some commentators suggest that one of them *is* Lydia). Their prominence as Paul's coworkers may have been more acceptable at Philippi than it would have been in some other parts of the empire. Macedonian and Roman women had more freedoms than women in more traditionally Greek areas, and inscriptions indicate heavy involvement of women in the religious activities of this city.

4:3. Ancients appreciated mediators who could reconcile estranged parties (see, e.g., *Cicero, *Letters to Atticus* 1.3; also 1.5; 1.10; *Tacitus, *Histories* 2.5). Clement may be the author of *1 Clement,* a late-first-century Christian letter from Rome to Corinth, as tradition suggests, although Clement is a common Roman name. The "book of life" is an *Old Testament image further developed in ancient Judaism (e.g., Ex 32:32-33; Dan 12:1; Mal 3:16; the *Essene CD 20.19; **Jubilees* 36:10).

4:4. One could repeat a word or phrase for emphasis (see comment on Phil 1:18). Constant rejoicing, like constant gratitude (cf. 4:6), reflects confidence in God (see comment on Eph 5:20).

4:5. "The Lord is near" could refer to the Second Coming (3:20-21; cf. Is 13:6; Ezek 30:3; Joel 1:15; 3:14; Zeph 1:7) or that the Lord is close to his people and hears their cries (see Deut 4:7; Ps 34:18; 145:18).

4:6-7. "Peace" (v. 7) could indicate tranquility (vs. the anxiety in v. 6), a trait valued by many philosophers, although in the context of unity it may also have its usual meaning of peace with one another (as in Greco-Roman *homonoia* speeches; cf. 4:2). If any connotations of the latter use are present, the image of such peace "standing guard" (if pressed in a military sense) over hearts and minds is striking. Jewish prayers (some based on Num 6:24-26) often asked God to keep his people from harm and grant peace. On the mind, cf. 4:8 and 2:5.

4:8. Like many writers, Paul resorts to a full list of virtues, including *arete,* "excellence,"

which was central to the Greek concept of virtue. Throughout this list he borrows the language of Greek ethics, although nothing he says would have been objectionable to traditional Jewish hearers. (He omits some traditional Greek virtues, like "beauty" and "goodness" per se, but the last omission need not be viewed as significant, because such lists were never intended to be complete.) Greek and Roman philosophers repeatedly emphasized thinking such virtuous thoughts, and Jewish writers repeatedly borrowed their language the same way Paul does to communicate to Greek-speaking Jewish readers.

4:9. Teachers often exhorted students to live what they had been taught and to follow the example set by the teacher.

4:10-20
Paul's Thank-You Note

Paul avoids a direct "thank you" in this section (which could portray him as a dependent on the *church's benefaction) while expressing his appreciation. Paul acknowledges their gift graciously, without sounding as if he is requesting more. (Gratitude may have been particularly valued in Macedonia, of which Philippi was a part; in earlier times an ungrateful man was said to have been liable to prosecution there—*Seneca, *On Benefits* 3.6.2.) In the ancient world, *patrons showed hospitality to and looked out for their *clients; if Paul had said "thank you" forthrightly, he might have cast himself in the role of a subordinate, dependent client.

4:10. Letters of friendship, when responding to a friend's letter, often opened with a statement of joy about receiving that friend's letter (e.g., Oxyrhynchus papyri 1676.4-5). Writers also often assured letters' recipients that the writers trusted the readers' intentions.

4:11-13. Greek moralists, influenced by *Stoic thought, praised those who could be content with little as well as with much. (*Cynics went so far as to prove their contentment in little by making certain that was all they ever had.) It was said that the wise man needed no one but himself and was completely independent. But although Paul uses the language of contentment in all circumstances (being able to do "all things," as in 4:13) common among Stoic philosophers and others, the idea of persevering and enduring for God's sake was commonly lived out by the *Old Testament prophets, Jewish martyrs and other servants of God.

Paul's "abundance" (NASB) would have been meager and simple by modern standards; artisans were better off than the poor, but far below the standard of living enjoyed by the modern Western middle class or by the well-to-do of antiquity. ("Moderation"—seeking a mean between two extremes—was central to most Greek discussions of virtue, especially in *Aristotle; it also appears in *Diaspora Jewish ethics. But Paul nowhere seeks such a mean; like the best of Greek philosophers, he can live in any situation. His language is thus closer to the dominant philosophic school of his day [Stoicism] rather than to the Peripatetic [Aristotelian] school. Unlike such philosophers, who depended only on themselves, however, he is "self-sufficient" only by virtue of Christ, who works in him.)

4:14-16. The language of "sharing" (partnership, 4:14-15) is the language of ancient business documents; it may even suggest a special account from which the Philippians sent Paul help when he was in need. "For my needs" (NASB, NRSV) also occurs in business documents specifying the purposes of a disbursement. The form he uses for the title "Philippians" is normally bad Greek but was what the Roman citizens of Philippi called themselves; it is thus a mark of sensitivity to their local traditions and culture.

4:17. "Profit" (NASB, NRSV, GNT), "what may be credited to your account" (NIV), is literally "fruit" (KJV), but because many business transactions involved crops this was a natural extension in ancient documents. Paul trusts that God will reward the Philippians with interest for their sacrifice on his behalf.

4:18. "I have received" was very common, perhaps the most common standard phrase, in receipts; Paul acknowledges their gift in regular business terms. But he also uses Old Testament language for a sacrifice ("sweet-smelling," GNT; "acceptable"; sacrificial language was sometimes applied figuratively); in being partners with this missionary, they are partners with the God who sent him.

4:19-20. Verse 19 may be a wish-prayer, as some commentators have suggested (see

comment on 1 Thess 3:11); others take it as a statement. On either reading, the point is much the same: Paul cannot pay back the Philippians, but he trusts that God will. Although ancient writers often used wealth as a metaphor for spiritual riches like wisdom, in this context Paul no doubt means that he trusts that God will reward them for their faithfulness to his work (cf. Deut 15:10; Prov 19:17). "Needs" in the case of most of the Philippian Christians were genuine, basic needs (see 2 Cor 8:1-2), not mere "wishes" (as some readers take it today). "In glory" (KJV, NASB, NRSV) can be translated "in a glorious way" or "glorious riches."

4:21-23
Conclusion

4:21. Greetings were common in ancient letters. Because Paul knows most of the believers in Philippi, he keeps his greeting general. Letters also commonly included greetings from others (in this case probably believers in Rome), because mail had to be sent via travelers and thus could not be sent frequently.

4:22-23. The "household of Caesar" could refer to anyone in the Roman civil service directly dependent on Caesar, including all his slaves and freedmen; it always indicated great prestige. It most likely refers here to the Praetorian Guard (see comment on 1:13); if Paul was in Rome at this point, anyone who guarded him (Acts 28:16, 30) would naturally be exposed to his teaching. Even Caesar's slaves wielded more power and prestige than most well-off free persons; the Praetorian Guard itself held the prestige of the Roman military's elite, often rewarded by Caesar himself. Paul's greeting would impress his readers: his imprisonment has indeed advanced the gospel (1:12-13).

Colossians

Introduction

Authorship. Not all scholars agree that Paul wrote Colossians. Some think that a *disciple of Paul wrote the letter in Paul's name (probably with his approval, or posthumously in faithfulness to his teachings). Others think that Paul simply dictated this letter to a *scribe, as he did most of his previous letters (e.g., Rom 16:22); in any case the probable date of the letter was in Paul's lifetime (see "Situation," below).

By the time Paul wrote Philippians (the likely period also for Colossians), he was increasingly borrowing popular philosophic language (cf. Acts 19:9). But although Paul may borrow language from some of the false teachers to make his case against them, most of the language that is used in Colossians has parallels in his undisputed writings (which also differ from one another). Given the brevity of the letter, the probable use of a scribe, similarities with undisputed Pauline letters and the lapse of several years since his earlier letters, the differences between Colossians and the undisputed Pauline letters need not require different authors. Pseudonymous letters existed but were normally written long after the death of the person in whose name they were written. Because an earthquake devastated or destroyed Colossae around A.D. 60–64 and it was never completely restored, it is unlikely that a letter would be written even purportedly addressing the *church there after that date; nor could a forgery have gone undetected during Paul's lifetime (which probably lasted till at least A.D. 64).

Colossae. Colossae was in Phrygia, where religion was practiced with intensity. There is evidence for a Jewish presence in Phrygia as early as the sixth century B.C.; this Phrygian Judaism seems to have mirrored its culture to a significant extent. Christianity likewise exhibited unorthodox tendencies in this region in subsequent centuries. Colossae was a small and socially unimportant city by this period; it is probably only one of many cities in which Paul's students had founded churches (Acts 19:10); perhaps some received similar letters. As noted above, the city was severely damaged or destroyed by an earthquake around A.D. 60–64 and never completely restored, hence many scholars think that Paul wrote before that date.

Situation. Colossians 2 may indicate that Christians were attracted to mystical

or *apocalyptic elements in a Judaism thoroughly influenced by Phrygian culture. A great number of backgrounds have been proposed for the error at Colossae: *mystery cults, broader *Hellenistic mysticism, Hellenistic Judaism, *Qumran-type Judaism and so on. The merit of considering these sources is that they all reflect some broader cultural ideas that played into the problems Paul confronted in Colossae; even Qumran parallels, while strictly limited geographically to Judea, provide evidence for some more widespread Jewish beliefs in this period. The one suggestion with little merit to sustain it is *Gnosticism, since full Gnostic systems cannot be dated this early. But that the Colossian error reflects one synthesis of different streams of thought that later developed toward Gnosticism is possible.

That some Jewish Sibylline oracles may issue from that region and the activity of later Christian Montanists there might suggest the possibility of ecstatic elements in local Judaism (2:18). Acts testifies that Paul was preaching *Christ to philosophically minded audiences in this period (see comment on Acts 19:9), and letters like Ephesians and Colossians give us an indication of Paul's grasp of popular-level Greek philosophy and also some of the popular philosophical ideas that permeated both *Gentile and Jewish thought in mid-first-century Asia Minor.

Commentaries. J. B. Lightfoot, *Saint Paul's Epistles to the Colossians and to Philemon* (1879; reprint, Grand Rapids: Zondervan, 1959), is still helpful; Ralph P. Martin, *Colossians and Philemon,* NCB (1974; reprint, Grand Rapids: Eerdmans, 1981), is also helpful; see now also Marianne Meye Thompson, *Colossians and Philemon* (Grand Rapids: Eerdmans, 2005). For more advanced work, important and useful scholarly commentaries include James D. G. Dunn, *The Epistles to the Colossians and to Philemon,* NIGTC (Grand Rapids: Eerdmans, 1996); Eduard Lohse, *Colossians and Philemon,* trans. W. R. Poehlman and R. J. Karris, Hermeneia (Philadelphia: Fortress, 1971); Douglas Moo, *The Letters to the Colossians and to Philemon,* Pillar (Grand Rapids: Eerdmans, 2008); Peter T. O'Brien, *Colossians, Philemon,* WBC 44 (Waco, TX: Word, 1982); Eduard Schweizer, *The Letter to the Colossians: A Commentary* (Minneapolis: Augsburg, 1982). Some of my primary sources appear in Craig Keener, "Heavenly Mindedness and Earthly Good: Contemplating Matters Above in Colossians 3.1-2," *Journal of Greco-Roman Chistianity and Judaism* 6 (2009): 175-90.

1:1-2
Introduction

The opening follows the standard form of ancient epistolary prescripts (name of sender, name of recipients and greeting). As is customary in Paul, "greetings" (Greek *charein*) becomes "*grace" (Greek *charis*); "peace" was a standard Jewish greeting, sometimes combined with "greetings" in Jewish letters (cf. comment on Rom 1:7).

1:3-14
Thanksgiving and Prayer for the Fruit Bearers

Thanksgivings to God or gods were fairly common in the openings of ancient letters. In Paul's letters, they often introduce major themes, which were on his mind from the beginning of the letter. Thus they often function the way that *exordia* did in speeches, introducing what follows and beginning the letter with a positive relationship with the readers.

1:3. Regular Jewish prayer times included many blessings, and Paul's prayer times clearly include many thanksgivings to God. Paul's mention of thanks is not merely conventional, for the purposes of the letter.

1:4. News was often carried by travelers. The Colossians' spiritual condition was reported to Paul by Epaphras, apparently Paul's student working among them (1:7; cf. Acts 19:10), who was originally from their city (Col 4:12). Speakers and writers often started on a positive note, even if they planned to offer some correction.

1:5. Jewish texts spoke of future rewards already reserved for the righteous (the rewards sometimes depicted as treasures in heaven), hence early Christian readers would be familiar with the idea.

1:6. The image of God's message bearing fruit may go back to Jesus' teaching (Lk 8:11); the *Old Testament often compares Israel with a vine or other plant and summons them to bear fruit for God (e.g., Hos 10:1; 14:7-8; cf. Gen 1:28; comment on Col 1:10).

1:7-8. "Epaphras" was a common name; this may well be the same Epaphras of Philemon 23. But Philippi and Colossae are too distant geographically for us to think that this is the same person as Epaphroditus in Philippians 2:25, although that name could legitimately be contracted as "Epaphras."

1:9. For unceasing prayer see Exodus 28:30 and 1 Samuel 12:23. Although philosophers sought "wisdom" and "knowledge," Paul here emphasizes the Old Testament moral and relational sense of the terms (e.g., Prov 1:2-7).

1:10. On fruit bearing and growing, see Genesis 1:28 ("growing" appears especially in the *LXX), immediately after speaking of humanity being made in God's image (Gen 1:26-27; cf. Col 3:10); and see comment above on 1:6. On "walk" (literally; KJV, NASB) or "live" (NIV, GNT), see comment on Galatians 5:16. *Gentiles sometimes spoke of people behaving "worthy" of God. Likewise, in Jewish tradition, "worthy" could mean "appropriate to" (2 Maccabees 6:23-24, 27), "deserving of (reward)" (2 Maccabees 15:21); Wisdom sought those worthy of her (Wisdom of Solomon 6:16), and the righteous who persevered would be "worthy for God," like an acceptable offering (Wisdom of Solomon 3:5). The Old Testament spoke of knowing God relationally, in covenant with him (Jer 24:7; 31:34; Hos 2:20), an idea developed also in the *Dead Sea Scrolls.

1:11. Paul groups closely related terms here ("power," "might"); *rhetoric could pile up terms with related meaning to dwell on a point, and such combinations also appear in the Old Testament, especially for praises of God (e.g., 2 Chron 20:6).

1:12-13. In the Old Testament, the "*saints" or "holy" or "set-apart ones" were Israel. Israel's "inheritance" was first of all the Promised Land but in Jewish tradition pointed toward the ultimate possession of the world to come (see comment on Eph 1:14). Christians become heirs of these promises in Christ. "Light" and "darkness" were regularly contrasted as good and bad respectively (e.g., Ps 27:1; Is 9:2; 42:6; 49:6; 58:8-10; 59:9; 60:1), and this was often applied to the conflict between good and evil realms (in the Dead Sea Scrolls and often in ancient literature). Perhaps relevant to Colossians 1:13-14, Jewish people on the Passover described their deliverance from Egypt as a call "from darkness into great light" and redemption from slavery (Mishnah *Pesahim* 10:5). (Some scholars have suggested that the image of transferral from one kingdom to another here recalls the many peoples in the an-

cient Near East uprooted by powerful rulers and settled elsewhere. But if any image from human kingdoms was intended, the image of a provincial achieving Roman citizenship or Gentiles accepting the yoke of God's *kingdom in Judaism might have been images more natural to Paul's audience; see also comment on 1:14.)

1:14. "Redemption" meant freeing a slave by paying a price for that slave; in the *Old Testament, God redeemed Israel from their slavery in Egypt by the blood of the firstborn and the lamb. This would fit the image of transferring a captive people from one realm to another (1:13). *Philo also believed that the Logos, God's Word, participated in redemption (cf. also Wisdom of Solomon 18:15); but this Logos background might be more relevant if it were mentioned as part of 1:15-17.

1:15-23
The Supremacy of Christ

Some of those in error at Colossae want to emphasize intermediate spirits and the forms of rigorous human spirituality found in their culture (see comment on 2:16-23); Paul insists that Christ is enough (cf. 2:6-15) and describes him in the language Judaism normally reserved for personified Wisdom. This image was a natural one for early Christians to describe Christ; Judaism personified God's Wisdom as divine, and the roots of the image in Jewish tradition go back at least as far as Proverbs 8. (It is possible, as some have suggested, that Paul cites a two-stanza Christian hymn in 1:15-20; such citations occur without notice in other ancient literature. But despite the evidence and scholarly consensus that favor it, the theory falls short of proof either for or against it. Speakers sometimes employed exalted and even rhythmic prose, especially when praising deities.)

1:15. Here Paul describes Christ in terms Judaism reserved for divine Wisdom, which was portrayed as God's archetypal image by which he created the rest of the world (cf. Prov 3:19; 8:27-30; Wisdom of Solomon 7:26-27; 8:1, 5-6; 9:1-2, 9; 10:1). This emphasis is particularly evident in *Philo, a then-recent *Diaspora Jewish philosopher who may reflect or represent some wider Diaspora Jewish ideas. He describes God's Logos, his Word, as his image (e.g., *Flight and Finding* 101), through whom the cosmos was formed (e.g., *Creation* 25, 31; *Special Laws* 1.81).

"Firstborn" could refer to the position of authority and preeminence given to the firstborn son in the Old Testament (Gen 49:3-4; cf. the "chief" in 1 Chron 5:12 and its *Septuagint translation). (Jewish texts most commonly applied the term to Israel. Ancient Near Eastern kings were sometimes acclaimed as sons of gods at their enthronements.) This term could also be another title for God's "Son" (Col 1:18; see Ps 89:27, although David was the youngest of eight sons). Both Greek and Jewish religion sometimes describe God or supreme deities as "First" and occasionally called some deities "the firstborn"; the emperor also claimed to be "first" among equals, the "equality" part being a rhetorical fiction. In Philo, the Logos was also God's "firstborn" (*Birth of Abel* 119; *Agriculture* 51; *Confusion of Tongues* 146; *Dreams* 1.215), though Philo could not have imagined the Logos becoming human.

1:16. The "invisible" creations of God refer especially to the angels in heaven who correspond to earthly rulers (see comment on Eph 1:19-23). Ancient Judaism accepted that God created both visible and invisible worlds. (Following *Plato, some Greeks emphasized in addition to the visible world the invisible patterns or images on which it was based.) Many Jewish writers, including Philo and even some Judean sources, gave angels or subordinate divine powers a role in creation; other Jewish and Christian writers (like Paul) are prepared to combat that view, as here.

Many Greco-Roman thinkers said that all things derived from, were held together in and would return to the Logos or nature or the primeval fire. In Jewish tradition, all things were created through and for God's Word or Wisdom. (In variants of that tradition, they were created for the righteous who upheld his word in practice.) Using different prepositions, ancient intellectuals often distinguished kinds of causation, including material ("from"), instrumental ("through"), modal ("in" or "by") and purpose ("for"); Paul employs three of these for Jesus here.

1:17. Many Greco-Roman philosophers said that all things were held together by Zeus or by the Logos, divine reason; by this they

meant to emphasize the unity of the cosmos. Greek-speaking Jewish writers like Philo also emphasized that God's Logos held the creation together, further identifying the Logos with divine Wisdom. In *Stoic thought, the Logos gave form to the primeval fire; in Judaism, Wisdom existed before all things and through it God created and then shaped the world.

1:18. "Head" could mean "authority" (2:10), "most respected or honored part" or "source" (2:19); on "body," see comment on Romans 12:3-5 or 1 Corinthians 12:12-26. God was sometimes called "the beginning" in Jewish tradition, and the term was even more often applied to Wisdom and the Logos; it was a natural term for the one from whom all things began. (In v. 18, it could be applied to the beginning of the new creation, however, as with "firstborn" here.) On "firstborn," see comment on 1:15. The *resurrection of the dead was expected at the end of the age; Jesus' resurrection ahead of that time was seen as the proleptic beginning or inaugurating of that future event (1 Cor 15:23).

1:19. The Old Testament speaks of God's choosing a place for his name to dwell, and delighting to dwell among his people, to dwell in Zion and so forth. Some suggest that "fullness" may refer to God's wisdom or glory filling the world (as in the Old Testament and Jewish tradition), or to the fullness of God's presence or attributes (as in Philo and other Jewish sources; cf. Col 2:9-10).

1:20-22. The reconciling even of the invisible powers (1:16) refers to their subordination rather than their salvation (2:15), "peace" being an end to hostilities. (In imperial propaganda, for example, the emperor was said to establish "peace" by subjugating his enemies.) Paul denies not their continuing activity in the world (2:8) but their real power to challenge Christ's *kingdom. (One might compare Enoch's mission to proclaim judgment against fallen angels in some early Jewish stories.)

1:23. Paul may intend the statement that the *gospel was announced throughout creation to counter the false teachers who claim secret, esoteric revelations (2:18). If "all creation" is meant literally ("everywhere" and "all the world" frequently appear in ancient *hyperbole), it might refer to the witness of creation (Ps 8:1; 19:1; 89:37; 97:6; cf. Rom 10:18). But here it is almost certainly a cosmic way (Is 51:16) of portraying that the gospel of Christ is for all peoples (Rom 1:8, 13; Mt 24:14). Jewish people generally believed that a person who rejected the covenant would be cut off from God; Paul similarly requires perseverance from those who profess Christ.

1:24–2:5
Paul's Labor for Them

Because Paul can describe his labor in terms of conflict suitable to an athletic contest (1:29), it is significant that Greek athletes traditionally strove in pan-Grecian competitions not only for their own honor but also for that of the cities they represented. Paul's sufferings are thus on the *church's behalf (1:24; 2:1).

1:24. Many Jewish people believed that some suffering had to be fulfilled before the end would come. Many scholars have thus read 1:24 as saying that Paul was taking an extra share of these afflictions, sometimes called "the *Messiah's birth pangs" because they presaged the messianic era. Others connect it with sharing Christ's sufferings as part of union with Christ (a concept with fewer non-Christian parallels). A speaker could appeal to hearers who would think favorably of one who suffered on their behalf (e.g., *Cicero, *In Catalinam* 4.1.2). (Paul suffers "for their sake" [NASB, NRSV], apparently meaning as their representative, because they are part of the church; it is not, however, vicarious suffering, because Paul clearly believes that Christ's suffering was sufficient in that regard; cf. 1:14; 2:8-10, 14.)

1:25. "Stewards" (cf. NASB) were managers of large household estates; they were often slaves or freedmen of high status. The phrase "fulfill the word of God" (KJV, literally) was sometimes used for obeying God's word, sometimes for being an instrument in bringing it to pass; Paul here both obeys and fulfills God's word by making it available to the *Gentiles.

1:26. The *Dead Sea Scrolls and other texts speak of "mysteries" in the Scriptures that only the spiritually enlightened can understand; for Paul, Christians are now enlightened (1:9, 12). This statement would refute mystics who claimed special, elite revelations belonging only to themselves (2:18).

1:27. That this mystery would be made

known among the Gentiles had been prophesied (e.g., Is 66:19) and was now being fulfilled (1:25). *Old Testament writers often said that God dwelled "among" his people Israel (Num 35:34), and on a personal level, "within" some of them (Gen 41:38; Num 27:18; Dan 4:8, 18; 5:11, 14; 1 Pet 1:11; more often, "filled," "rested on"; less relevantly, except to how some recent converts might hear Paul, some philosophers spoke of divinity or a deity within humans). But no one expected him to dwell among the *Gentiles*—indeed, on the personal level, within them (Col 2:12; 3:4, 16).

1:28. This teaching leads to their maturity or completion; cf. 1:22; 1 Corinthians 2:6 and 3:1-2; 2 Corinthians 11:2 and comment on Philippians 3:12-13. (Stoics viewed the ideal wise person as complete, but rarely believed that they attained that ideal.) Thus teaching Christ would lead to the hearers being prepared for the final day (1:22-23). "We" presumably includes Epaphras (1:7) and other proclaimers as well as Paul; "every person" again probably implies the free inclusion of Gentiles in God's plan (1:27).

1:29. Philosophers commonly used metaphors from athletic competition, such as "strive" (KJV, NASB) here (the image is much rarer in the Old Testament, e.g., Jer 12:5). Divine empowerment "within" (NASB, NRSV) has very limited ancient parallels apart from Old Testament texts about the *Spirit's enabling God's servants; Paul's language here would have impressed ancient hearers in a special way (see introduction to Rom 8:1-11).

2:1. He continues the athletic image of 1:29 ("struggle"). Although Paul had never met most of the Colossian Christians personally, he expresses his longing for them; this was a common element of ancient "letters of friendship." Colossae was in the Lycus Valley and not on an easy route from Ephesus. Like Colossae, Laodicea was in Phrygia; it was roughly ten miles west of Colossae.

2:2-3. Ancient sages (including *Gentiles but also common in the Old Testament and Jewish wisdom writers) often spoke of wisdom as the true wealth (in the Old Testament, see Job 28:12-19; Ps 19:10; 119:14, 72, 127, 162; Prov 3:13-15; Is 33:6). Writers sometimes also spoke of "hidden" treasures, a dream especially valued by the impoverished multitudes.

2:4. Sages often criticized professional public speakers for their unethical use of persuasion at all costs, regardless of truth. Many educated people in antiquity were trained and skilled in persuasive speech.

2:5. Letters often served as a surrogate for one's presence while one was absent, as ancient writers sometimes pointed out (cf., e.g., *Cicero, *Letters to Friends* 1.7.1; *Letters to Atticus* 12.53; Dio Chrysostom, *Epistles* 3; Symmachus *Epistles* 1.84). Saying that one remained with someone "in spirit" was an expression of intimacy and affection. The point is intimacy, not metaphysical unity (see comment on 1 Cor 5:3).

2:6-15
Complete in Christ

2:6. "Walk" (KJV, NASB) or "live" (NIV) was a regular term for behaving according to God's laws (see comment on Gal 5:16), and "receive" was often used for Jewish teachers of the *law passing traditions on to their students. Paul thus exhorts the Colossians to continue in what (and whom) they were taught, not according to mere human traditions (2:8).

2:7. Paul combines agricultural and building images here, as in 1 Corinthians 3:9 (see comment there). The *Old Testament prophets used this language for Israel (if they obeyed God, they would take root, be planted, built up, etc.), and early Christians probably took this language from their preaching of the Old Testament.

2:8. Paul uses philosophical language in his letters (including this one), but his source of knowledge is God's revelation in *Christ (2:2-3, 6), not the finite human reasonings of philosophers (2:4). Even though only the most educated went on to study *rhetoric or philosophy, the influence of these disciplines permeated the ancient world. Because philosophy in this period grappled most often with moral and ethical issues, new Christians in the culture now struggling with the same questions would naturally be interested in philosophers' ideas. *Diaspora Jewish writers praised "philosophy," and some, like Philo, combined it readily with ecstatic experiences (cf. 2:18). (*Josephus, a Palestinian Jew writing for a non-Palestinian Gentile audience, even calls Judaism a "philosophy"—*Against Apion* 2.4,

47—and describes the different Jewish movements as philosophical sects. The *Letter of Aristeas,* *Philo and even *Justin Martyr's Trypho approved of and were skilled in Greek philosophy, and many Jewish apologists, including Philo and Josephus, accused the Greek philosophers of plagiarizing Moses.)

On "traditions," which characterized especially Pharisaic teachers in Palestine, see comment on 2:6; Greek *disciples also "passed on traditions" of their teachers' sayings. "Elementary principles" (NASB) translates a term that can refer to the personified forces of nature, spirit beings or "spirits" (NRSV, GNT; cf. NIV, ESV), as in Galatians 4:9 (cf. Colossians 2:10); but here it may refer, as usually, to elementary principles (the term is often used of the alphabet). If this is the case, Paul affirms that the simple message of Christ is much more profound than the greatest secular wisdom could be. (Philosophers also addressed cosmology, debating the universe's basic "elements.")

2:9. *Stoics spoke of the deity as being filled by all things, usually in a pantheistic sense; Greek-speaking Jewish writers modified this language to refer to God's rule encompassing all things. For Philo, the "fullness" can be the sum total of the powers manifesting God's rule, denoting God's all-sufficiency in himself; much later Jewish mystics spoke of the heavens around God's throne as his fullness. Other Jewish writings spoke of God's *Spirit, wisdom or glory filling the world, as in the Old Testament, which may be more to the point here.

Whatever precise sense Paul means by "fullness," he clearly means that access to all that God is and does is available only through Christ, a function ancient Judaism often attributed to divine Wisdom.

2:10. "Rule and authority" (NASB) probably refers to the angelic powers thought to rule the nations of the world (see 1:16; comment on Eph 1:19-23), a doctrine that is somehow central to the erring persons wishing to influence the Colossian Christians (see comment on 1:16; 2:18). Of the various possible meanings for "head" (1:18), "authority" or "ruler" makes most sense here, although Jesus is also their "source" (1:16).

2:11-12. Physical circumcision was normally said to be "in the flesh" (Gen 17:11). The Old Testament and some Jewish (mainly *Essene) texts speak of "spiritual" circumcision (Deut 10:16; 30:6), which in the *Dead Sea Scrolls can enable one to overcome the evil impulse (see comment on Rom 7:14-25). Paul might here play on the Greek idea of the body as a "tomb" from which one must escape for mystical experiences and for ultimate deliverance in death; if this view has been a temptation for his readers, Paul is saying that they have already experienced all the deliverance from flesh's power that they need.

2:13-14. The term translated "written code" (v. 14, NIV) was used for "handwritten" (see KJV) notes, usually "certificates of debt" (NASB) with penalties attached. Paul intends his readers to think of an IOU before God; Jewish tradition also portrayed sins as "debts" before God. Jewish people used the term translated "decrees" (NASB) or "regulations" (NIV) for God's laws; decrees were often posted in public locations. The Jewish people believed that their sins were forgiven when they repented; records of sins would be blotted out on the annual Day of Atonement. Paul says the *atonement occurred when the debt was nailed to the cross in Christ and thus paid. (Crucifixion did not require nails, but these were used in Jesus' case; Jn 20:25; cf. Acts 2:23.)

2:15. On "rulers and authorities" (NASB, NRSV), see comment on 1:16 and 2:10. In 2:8 Paul used a word that could mean "take as a prisoner of war"; here the cosmic powers themselves are shown off as captives in Christ's triumphal procession, an image familiar to Romans and presumably known to others throughout the empire (see comment on 2 Cor 2:14). In Roman triumphs, the general (in this period normally the emperor) dressed as the chief god Jupiter and led behind him humiliated captives, stripped of their possessions; prominent captives were the most impressive. Here Christ displays his triumph over the most prominent captives possible. (Ironically, though Paul was in Roman custody, the spiritual rulers behind the earthly ones were Christ's captives.)

2:16-23
Avoid Human Religion

*Christ is sufficient (2:6-15); *ascetic additions to the *gospel would only detract from faith in it.

2:16. Asceticism was growing in paganism, and many viewed it as a means of achieving spiritual power or revelatory experiences. But this text clearly refers to Jewish customs; although much of Palestinian Judaism opposed asceticism, Judaism and Christianity in other parts of the empire often took on the characteristics of the surrounding culture. *Gentiles sometimes associated local Judaism with asceticism (even linking the sabbath with fasting, although the forms of Judaism we know about would not have permitted fasting on the sabbath). Gentiles mocked Jews as separatists especially on three issues: circumcision (2:11), special laws about food and drink, and special holy days. The "new moon" celebration was used to greet each new month; the sabbath was a weekly festival.

2:17. *Plato distinguished the "real" world of ideas from the shadow world of sense experience. *Philo developed Plato's concept to argue that the invisible God was known through "shadows," or copies, of his character, rather than through sensory vision. Writers by this period distinguished substance or body, the original reality, from shadows or mere copies; adapting their language, Paul believes that the *Old Testament prescriptions testified to genuine principles, but that those principles are fulfilled in Christ. Those with the reality did not need to depend on the shadows whose function was to point to the reality. Paul's term for "substance" is also his term for "body," perhaps pointing to the embodiment of new values in Christ's physicality (1:22; pace Platonism and the ascetics in 2:23) and in the *church (1:18, 24; 2:19; 3:15).

2:18. Jewish literature often conjoined "humility" ("self-abasement," NASB, NRSV) in a positive way with fasting. But when taken to an extreme, "humility" included ascetic practices designed to open oneself to "visions" and ecstatic experiences. Such practices became popular in second-century Christian asceticism. (Insufficient protein and sleep deprivation are known to induce hallucinations today as well.)

"What they have seen" (NIV) may be the language of visions (NASB, NRSV). It suggests that the erring people in Colossae may have been like the Jewish mystics, known from other sources, who regularly sought to achieve the heavenly vision of God through ecstatic revelations of God's throne. Although these were attempts to simulate the experience of biblical visionaries like Ezekiel, the biblical visionaries sought only to heed God, not to achieve mystic experiences per se. On vain visions, cf., e.g., Jeremiah 23:32 and perhaps Ecclesiastes 5:7.

Jewish mystics and *apocalyptists sometimes claimed communications from angels (cf. Gal 1:8; in a positive vein, Acts 27:23; Rev 1:1). It appears that in Colossae, some were venerating angels; although this veneration violated the teachings of some Judean sects such as Pharisaism, some evidence indicates that many common *Diaspora Jews addressed prayers and petitions to angels, a practice that overlapped with magical spirit invocations. (Some Jewish literature, especially the *Dead Sea Scrolls but also other texts, spoke of the earthly community entering into the worship of the heavenly community, and some scholars think Paul attacks that idea here; but the book of Revelation might approve of joining heaven's worship, and it is unclear that Paul would have reason to attack the practice.)

2:19. Ancient medical literature sometimes described the head as the source of life for the rest of the body.

2:20-21. Union with Christ in death was sufficient (cf. 2:11-12); adding ascetic rules (2:18) was useless (on "elementary principles," see comment on 2:8). The "decrees" (NASB) or "rules" (NIV, GNT) may be Jewish "regulations" (NRSV), as with the cognate term in 2:14. (Although the language with which Paul describes them in v. 21 has been compared to descriptions of *Pythagorean asceticism, the language could fit Old Testament purity rules just as well.) Most Jews outside Palestine still kept the food laws, and some Jews forbade even touching particular foods (**Letter of Aristeas* 129); other Old Testament laws explicitly decreed one impure for touching some things (e.g., Lev 11:39; 15:5; Num 19:11; but cf., e.g., Mt 9:25). (This application would be especially appropriate if Paul thought of people adding to those rules, as Jewish teachers noted that Eve or Adam her tutor apparently added "Do not touch" to God's "Do not eat"—Gen 2:17; 3:3.)

2:22. Those influenced by philosophical

thought recognized that transitory, perishable things were much less valuable than what was eternal. "Human commands and teachings" (NIV, NRSV) is an allusion to the Greek translation of Isaiah 29:13, which Paul's hearers might also recognize from the Jesus tradition (Mk 7:7).

2:23. Pagan philosophers (especially Stoics) often spoke of freeing oneself from bodily pleasures so one could concentrate on the contemplations of the soul. Some elements of paganism were tending toward asceticism, which became still more prevalent in the second century. (Pagans converted to Christianity may have also thought Christianity tended toward asceticism, with its countercultural emphasis on avoiding premarital sex and drunkenness; Judaism was sometimes similarly misinterpreted as ascetic. This misinterpretation of Jewish and Christian morality may have disposed some of the converts toward genuine asceticism after their conversion.) But for Paul, "beating down the flesh" is worthless for dealing with fleshly passions.

3:1-11
Living Out the Dead Life

Paul's premise is that the Colossians have died with *Christ (2:20); therefore trusting the finished work of Christ and living as what they are in him, rather than following human religious regulations (2:21-23), will produce holy living.

3:1-4. In *Plato's famous *parable of the cave, centuries before Paul, shadows on the wall (cf. 2:17) merely reflected the real world above. Many people by Paul's day believed that the heavenly realms were pure and eternal, in contrast to the temporal and perishable world below. Philosophers thus became known for meditating on heavenly things (many repeated the joke about the philosopher who fell into a ditch because he was staring at the heavens). Jewish *apocalyptic writers also distinguished between the heavenly and earthly realms, emphasizing the purity of God's realm in the upper heavens.

The Jewish mystics creating problems at Colossae may have been seeking these upper realms through mystical experiences (2:18). For Jewish mystics, the goal was vision of God's throne; for some philosophers, the goal was vision of the ultimate deity, who was pure mind and separate from the world of matter. For Paul, by contrast, the object of heavenly contemplation is Christ. In the context, this includes Christ's character or heavenly values centered around Christ (3:10-17), available because those who died and rose with Christ were also exalted with him (cf. 2:20; 3:1, 5, 9-10; Eph 2:6). The phrase "heavenly matters" was sometimes used this way.

3:5-7. Other Greco-Roman writers (including Jewish ones like the author of *4 Maccabees) also listed vices and warned against passions. Paul might emphasize their "earthly" body because the erring people influencing *church members had adopted a popular Greek view in which one's soul was heavenly and eternal but one's body earthly, perishable and sometimes thus viewed as unimportant. Paul uses their own language to emphasize that it does matter what one does with one's body.

Paul does not believe in "beating down the body" (2:23), but he is willing to speak of amputating appendages or "putting them to death" in a *figurative* sense. Perhaps borrowing an image from Jesus (Mk 9:43, 45, 47), Paul here describes passions as "members of the body." (The body was not evil, but indulging all its desires without observing God's restrictions was. *Philo speaks occasionally of the soul's needing to extinguish the body; but most thinkers recognized that morally therapeutic amputations were ineffectual, such as postadolescent castration, which did not remove sexual desires; they would mean such statements metaphorically.) But one puts to death the sinful lifestyle by depending on one's finished death in Christ (3:3-4), not by harsh treatment of the physical body (2:18, 20-23). The sins Paul lists here are typical sins *Gentile converts to Judaism would have committed before their conversion.

3:8. Greco-Roman (the Stoic Zeno, Diogenes Laertius 2.93) and Jewish teachers (see 4 Maccabees and the rabbinic commentary *Sifra*) sometimes had a second list of subordinate or less obvious vices following the first list, announcing that these too should be removed. In contrast to the more obvious vices of 3:5 practiced primarily by Gentiles, even Jewish people grappled with the sins listed here.

3:9-10. "Take off" and "put on" (NIV) may reflect the image of armor used by Greco-Roman moralists or Jewish tradition's occasional image of being "clothed" with the *Spirit, although Paul could also have simply concocted his own image of spiritual clothing (which he uses frequently; see comment on Rom 13:12); there is nothing profound in the fact that ancient peoples had to put on and take off clothes. (Some scholars have argued that this is a baptismal image. Because *baptisms in Jewish ritual baths were normally performed naked, disrobing and being clothed again afterward would make sense. We can hardly imagine, however, that John's public baptisms in the Jordan [Mk 1:5]—which probably included men and women—were done in the nude, and we have no clear evidence of how non-Palestinian churches practiced baptisms in this period.)

"Old person" and "new person" probably allude respectively to Adam, in whom the old humanity lived (in the light of Jewish concepts of corporate personality and the use of *'adam* as a term for "human" in Hebrew), and to Christ. An allusion to Adam is the likely import of "image" and "created" in 3:10 (see Gen 1:26). The language of "renewing" fits Jewish teaching about a new creation arriving with the messianic era at the end of the age, which Paul believes has been inaugurated in Christ, the new Adam (see comment on 2 Cor 5:17); it has come, but believers living out the life of the new age in the old age must continually realize their participation in this newness to behave accordingly. The renewal may also reflect the language of the *Old Testament (Ps 51:10; cf. Ezek 18:31), especially language about God's work in his people at the end (cf. Ezek 11:19-20; 36:26-27).

3:11. Of all peoples in the empire, Greeks, fiercely proud of their own heritage, were often the most intolerant of Jewish people. Circumcision divided Jews from non-Jews. In the Greek language, which was widespread by Paul's time, "barbarians" technically still meant all non-Greeks, although some non-Greeks broke down these categories differently (e.g., some Alexandrian Jews claimed to be Greeks, even though this claim infuriated Alexandria's ethnic Greeks). Scythians were generally considered the most barbaric, cruel and anti-Greek people (although some ancient writers portrayed them as "noble barbarians"). "Slave and free" was one major way of dividing humanity socially, although some slaves were more advanced socially than many free persons. "Christ is all" may mean thus that he, rather than any human divisions, rules all of human life.

3:12-17
Rules for the Christian Community

The parallels with Ephesians here are so close that many scholars believe that Ephesians copied and expanded Colossians. When a letter purportedly from Paul diverges significantly from another Pauline letter, some scholars attribute the different letter to another author. But when the letter with differences also exhibits similarities to another Pauline letter, some scholars say one writer copied the other one. Neither line of argument is adequate by itself, however, without substantial evidence for non-Pauline authorship. Paul may have sent out similar instructions to different churches in this period of his life, or even allowed an assistant to revise some basic instructions for different congregations (see comment on 4:16). *Scribes were sometimes tasked with drafting material in documents based on already available material.

3:12-13. "Chosen," "holy" and "beloved" (NASB, NRSV) were all terms that the *Old Testament applied to Israel. For "put on" (KJV, NASB) see comment on 3:10. Paul includes a list of virtues, also a standard literary form in his day.

3:14-15. Love often appears as an important virtue in antiquity (sometimes as the chief virtue in Judaism), but it appears repeatedly in early Christian literature as the supreme virtue, in a manner not consistently paralleled in any other body of ancient literature (e.g., for some "wisdom" was the dominant virtue, or *Aristotle's four cardinal virtues dominated). "Peace" (v. 15) probably especially means "among one another," in unity (v. 14); this virtue was highly valued in both Jewish and other Greco-Roman literature.

3:16. Whereas Ephesians 5:18-19 emphasizes the Spirit in worship, Paul in Colossians is concerned with erring persons who have not

recognized the full sufficiency of Christ; he thus emphasizes the "word of Christ" here. On the worship, see comment on Ephesians 5:19.

3:17. Ancient culture was pervasively religious, but most pagan religious practices were ritual observances that did not cast moral influence over one's daily life and ethics. For Paul, by contrast, every aspect of life must be determined by Christ's lordship.

3:18–4:1
Rules for the Household

*Aristotle had developed "household codes" directing a man how to rule his wife, children and slaves properly. By Paul's day persecuted or minority religious groups suspected of being socially subversive used such codes to show that they upheld traditional Roman family values. Paul takes over but modifies the codes (though less in Colossians than Ephesians). See the more detailed discussion on Ephesians 5:22–6:9.

3:18. All ancient moralists insisted that wives should "submit" to their husbands, though few would have stopped short of using the term "obey," as Paul might do here (cf. 3:20, 22; see comment on Eph 5:33).

3:19. Although the ancient instructions to husbands normally stressed how he should rule his wife, Paul stresses instead that he should love her.

3:20. Throughout the ancient world (including under *Old Testament *law, Deut 21:18-21), minor children were expected to obey their parents; although Roman law allowed the father to demand obedience even of adult children, adults no longer living with their parents were normally expected only to honor their parents.

3:21. Most ancient fathers and educators beat their children as a matter of course; like a minority of ancient moralists, Paul advocates a more gentle approach to child rearing.

3:22-25. Ancient law treated slaves as property as well as treating them as people, and their obedience was expected. Many, however, considered slaves generally lazy (an attitude easy to understand in some cases, since slaves rarely shared the profit of their own labors). The admonition that slaves devote their work to the Lord relativizes the master's authority (cf. 4:1); "not pleasing people" was also common advice in ancient Jewish ethics. For more on slavery in general, see the introduction to Philemon.

4:1. Some Greek and Roman philosophers warned that masters themselves could become slaves someday (unlikely as this was), so they should treat their slaves rightly. Aristotle attacked philosophers in his own day who said that slavery was against nature and therefore wrong. By contrast, Paul clearly believes all people are by nature equal before God; although he does not address slavery as an institution here, what he does write thus suggests that he does not favor it. Although he has no control over the system, he can warn masters to keep in mind their status before God. For an example of a situation in which he does have more potential influence, see Philemon.

4:2-6
Rules Beyond the Community

4:2-4. For an "open door" as opportunity, see comment on 1 Corinthians 16:9. Keep in mind that Paul is in Roman custody. Most prisoners lacked access to washing or haircuts, though Paul may be in a lighter form of custody here (see comment on Acts 28:16).

4:5. The *New Testament often uses "outsiders" for "those outside the *church." It may be related to a term used by later Jewish teachers for those who did not understand the *law, but it is a natural image by itself, perhaps more analogous to the way Jews viewed *Gentiles in general. "Redeeming the time" (KJV, literally) probably means "making the most of the time" (NRSV). (Cf. Ps 90:12. The *LXX of Dan 2:8 uses the phrase for trying to gain a delay.)

4:6. "With grace" (KJV, NASB) can mean with gracefulness, pleasantness and so forth (closer to the classical Greek usage of "*grace" than the usual New Testament usage); see comment on Ephesians 4:29. Salt was a preserving and flavoring agent; thus Paul probably refers to speech designed to make sense to outsiders and be relevant to them (cf. the common ancient depiction of pleasant speech as "honeyed"). When a particular *rhetorician recommended salting one's words properly, he seems to have meant sarcastic wit; in this context, Paul seems to mean instead a gentle answer (cf. Prov 15:1).

4:7-18
Closing Greetings

Letters often closed with greetings from others, because letters went out irregularly and undependably (whenever someone was traveling to the recipients' area).

4:7-8. News was often carried by word of mouth via travelers. Hosts usually asked their guests about people they both knew elsewhere. Such news bearing was thus normally only incidental, but Paul sent Tychicus for the purpose of bearing news. Personal news from custody or during war was sometimes dangerous to put in a letter, entrusted instead to a discreet traveler who could supplement the letter.

4:9. Because Paul is writing from imprisonment (4:18), this Onesimus could be the same one as in Philemon 10 (cf. perhaps 2 Tim 1:16), at a later period. An Onesimus became bishop of Ephesus by the early second century, but we cannot be certain it is the same one Paul mentions here.

4:10. Both Aristarchus (Acts 20:4) and Mark (Acts 13:13; 15:37-39; 2 Tim 4:11; cf. 1 Pet 5:13) were junior colleagues of Paul in ministry. "Fellow prisoner" could mean that Aristarchus was also a captive, but it might be figurative, simply meaning that he accompanied Paul, who was in custody (cf. Acts 27:2).

4:11. "Jesus" (which can also be translated "Joshua"—GNT) was a common Jewish name. Many Jewish people used a second Greek or Latin name resembling their more traditional Jewish name, and this "Jesus" bears also the Latin name "Justus." That Paul sent greetings from Jewish and Gentile workers engaged in spiritual ministry together would have struck ancient readers as far more profound than most modern readers can guess.

4:12. "Striving" ("wrestling"—NIV, NRSV; "laboring"— NASB) is a term that can designate conflict or athletic competition signifying great exertion; philosophers and others often used it metaphorically (see comment on 1:29; cf. Gen 32:24?). Paul thus depicts prayer as a form of spiritual conflict or discipline crucial to their mission (4:2-4).

4:13. Recommendations could speak of another's fondness for the letter's recipients (e.g., Pliny, *Epistles* 7.31.1). The three largest cities of the Lycus Valley in Phrygia were Colossae, Laodicea and (six miles from Laodicea) Hierapolis; in this period Colossae was the least significant of the three. Hierapolis hosted healing cults, a temple to the emperor and the reported entrance to the underworld; it also had a significant Jewish presence in this period. Laodicea was a wealthy commercial center, despite its somewhat remote location.

4:14. Physicians were well educated but were often slaves or *freedpersons, with relatively low social status. Although most physicians were men, women physicians (most often but not limited to midwives) are known. Empirically valid observations existed alongside folk traditions, superstition and guesswork; there were no board-accredited physicians, and different schools of medical thought existed. Pagan healing cults (such as that of Asclepius) allowed for medical practice alongside prayers to a deity; views varied somewhat in Judaism, but later hospitals evolved especially from the eventual Christian practice of caring for the sick in late antiquity. Although I deem it unlikely (based on the geographic distribution of "we" in Acts), some have suggested that Luke studied medicine in Laodicea (where there is evidence of a prominent medical practice) or practiced for a healing cult in Hierapolis (before his conversion); the readers seem to have heard of him. *Papyri attest that some Jews did bear the Greek name "Demas" (cf. 2 Tim 4:10), but in this context (Col 4:11) Demas seems to be a Gentile.

4:15. Early manuscripts differ on the gender of "Nympha," but *scribes would more likely change a woman's name into a man's name here than the reverse; hence the feminine form "Nympha" is probably original, giving her a position of influence in a house church.

4:16. Paul's letter to the Laodiceans is no longer extant, although some scholars have suggested that it is our current letter to the Ephesians (contrast comment on Eph 1:1; but the circular letter could have gone to Laodicea, the nearest location it went to Colossae); like Ephesians, it may have been similar to Colossians. Nearly all reading was done aloud, and letters to groups would naturally have been read to the whole group by one person, because even in urban areas

most people could not read well. In a church service, Paul's letter may have been read alongside *Old Testament Scripture, although it is unlikely that either Paul or his earliest readers guessed that some of his letters would become Christian Scripture.

4:17. Archippus may have been Philemon's son or at least a colleague in his house church (Philem 2).

4:18. Writers usually dictated letters to scribes but often closed with a signature in their own handwriting.

1 Thessalonians

Introduction

Authorship. The vast majority of scholars acknowledge 1 Thessalonians to be Pauline, the majority recognizing it as Paul's first extant letter.

Date. First and Second Thessalonians may be the earliest of Paul's extant letters, written shortly after the evangelization of the Thessalonians, hence by about A.D. 50, within two decades of Jesus' *resurrection.

Situation. While preaching Jesus as *Messiah (the Jewish king) in Thessalonica, Paul had been accused of preaching another king besides Caesar (Acts 17:7; cf. "*kingdom" in 1 Thess 2:12; 2 Thess 1:5). The very young Thessalonian *church continued to experience persecution after Paul's departure, but he encourages them with the promise of a future hope, which applies even to those who have already died (1 Thess 4:13-18). Paul borrows much of the language used by Jesus and Jewish *apocalyptic motifs that had become part of the early Christian movement.

Form. Technically, the handbooks that mention letter types are later, and divide letters into types merely to provide examples for composition; nevertheless, they may provide some sensitivity to ancient ways of thinking about important themes in letters. Most of Paul's letters include a thanksgiving, but some commentators think that his thanksgiving in this letter extends from 1:2 to 3:13 (which is unlikely); thus they characterize this as a "letter of thanksgiving." Others categorize it as a "letter of comfort" or a "parenetic letter" (a letter telling them how to behave); it also contains substantial elements of a "letter of praise," commending the Thessalonians, and features from "letters of friendship." Like most ancient letters, 1 Thessalonians is a mixture of various types, borrowing themes as necessary from each type (to the extent that they existed as such) without concern for formal categories; its closest parallels, however, are to parenetic letters. It has deliberative elements.

Unity. Nearly all scholars today acknowledge that 1 Thessalonians is a unity (the change of tone in chaps. 4–5 is characteristic of Paul's and some similar letters), except for 2:14-16, which some scholars think (on content grounds) were added later to Paul's letter. Chapters 1–3 seem to exhibit a slightly modified chiastic (inverted parallel) structure, however, which suggests that even these verses belong: thanks-

giving (1:2-5; 3:9-10), victory in suffering (1:6-10; 3:6-8), apostolic care (2:1-13, 17-20) and suffering (2:14-16; 3:1-5).

Commentaries. Among commentaries helpful for background are Abraham J. Malherbe, *The Letters to the Thessalonians,* AB 32B (New York: Doubleday, 2000); I. Howard Marshall, *1 and 2 Thessalonians,* NCB (Grand Rapids: Eerdmans, 1983); note also F. F. Bruce, *1 and 2 Thessalonians,* WBC 45 (Waco, TX: Word, 1982); and Leon Morris, *The First and Second Epistles to the Thessalonians,* NICNT, rev. ed. (Grand Rapids: Eerdmans, 1991). Among other helpful studies, see Karl Paul Donfried, *Paul, Thessalonica, and Early Christianity* (Grand Rapids: Eerdmans, 2002); Abraham Malherbe, *Paul and the Thessalonians: The Philosophic Tradition of Pastoral Care* (Philadelphia: Fortress, 1987).

1:1-10
Introduction and Thanksgiving

It is uncertain where (or if) Paul's thanksgiving breaks off; because Paul did not write in paragraphs but according to flows of thought and *digressions, one cannot always outline his letters as we might outline discussions of topics today.

1:1. This was the standard way to open a letter. "Silvanus" is Silas's Latin name as a Roman citizen; a Jewish Roman citizen's parents often chose for their child Jewish (*Aramaic) and Latin names that sounded similar.

1:2. Thanksgivings were a common feature of ancient letters. Verses 2-10 might function like a proem, the customary opening designed to secure the hearers' goodwill, although Paul also wishes at the same time to encourage them; he is lavish in praising them (a skill emphasized in antiquity most extensively in epideictic *rhetoric). On "mentioning" in prayers, see comment on Philippians 1:3-4.

1:3-4. "Chosenness" (v. 4) was a term the Jewish people applied exclusively to themselves; Paul applies it here to a *church that includes many *Gentile converts.

1:5. Parenetic letters often reminded readers of what they already knew. Appealing to readers' own eyewitness knowledge was an irrefutable technique of argument.

1:6. Students often imitated their teachers, and invitations to imitation were normal in parenesis; but Paul claims that they have already begun to do so. The common Jewish association of the *Spirit with divine inspiration might suggest inspired or even ecstatic joy (perhaps in jubilant worship), although the Spirit was associated with other activities as well. Most of pagan culture reacted angrily to Jewish people's converting pagans from the religion of their ancestors; because a greater percentage of Christians were converts from Gentile backgrounds, they would face still greater hostility.

1:7. Achaia, south of Macedonia, was well aware of events in that nearby province.

1:8. Travelers usually carried news with them, and the other churches may have heard of the Thessalonians through the Philippian messengers, also from Macedonia, who brought Paul support (2 Cor 11:9; Phil 4:15-16), or through any other Jewish or Christian travelers. Cf. Psalm 19:4. Geographical *hyperbole ("every place") was not uncommon.

1:9. Statues of deities were pervasive; some Gentile intellectuals (as opposed to the masses) viewed them as merely reminders of the deities, but Jews rejected them as idols. Jewish texts often described the radical change required of pagans converting to Judaism in terms like those Paul uses here; the Roman writer *Tacitus also criticizes Judaism for making *proselytes despise the gods and so reject their own countries and families. Foreign religions could become accepted in Thessalonica, however. Among major cults in Thessalonica were the Egyptian cults of Serapis and Isis, as well as those of the more traditional Greek gods like Dionysus and the Roman cult of the emperor; some of the upper class sponsored the cult of the Cabiri from the Aegean island of Samothrace.

1:10. Jesus' *resurrection was the advance installment of the resurrection of all the righteous dead at the end of the age (which figured prominently in Jewish teaching from Dan 12:1-2 onward); Jesus will thus deliver the Thessalonians from wrath at the time of their resurrection. The *Old Testament often applied the term "wrath" to God's judgments within history, but this term was often extended, as nearly always in Paul and the *New Testament, to the outpouring of God's wrath in the final day of the Lord, the day of judgment when, according to the New Testament, *Christ returns to punish the wicked (e.g., Is 13:9, 13; 26:20; 30:27; Zeph 1:18; Rom 2:5).

2:1-12
The Nature of the Apostles' Coming

Speeches and letters often contained a strong *narrative element near the beginning, recounting the events leading up to the circumstances of the speech or writing. As in much other parenetic (i.e., moral exhortation) writing, Paul contrasts proper and improper lifestyles by antithetical parallels ("not . . . but").

Paul need not be responding to actual "opponents" in this section, as some earlier commentators thought (although given the perse-

cution the *church in Thessalonica faces, it is not unlikely that he suspects that standard criticisms have been raised against him in his absence). Wandering sages were often criticized and hence developed some traditional themes that they emphasized whether or not they were defending themselves, themes that Paul also uses here. As Malherbe points out, Dio Chrysostom, a public speaker who lived a generation after Paul, accused most *Cynics (wandering beggar philosophers) of error, impurity, deceit (2:3), flattery (2:5), and love of honor (2:6) and money (2:5). In contrast, Dio Chrysostom also observed that a true philosopher is gentle, like a nurse (2:7).

2:1-2. Dio Chrysostom criticized false philosophers, who feared insulting treatment from the masses, and he described their speech as vain. True philosophers, he said, spoke with boldness even in the face of opposition. Paul and his companions were "mistreated" (NASB, NRSV), "treated outrageously" (NIV) or "shamefully treated" (ESV) in Philippi shortly before arriving in Thessalonica; this term means that they were scandalously treated in a humiliating manner, being publicly stripped and beaten without a hearing (Acts 16:22-23).

2:3. Spurious philosophers were charged with speaking out of error, impurity and deception. ("Impurity" here might allude to the philosophical idea that one should use reason to purify one's mind from its slavery to human lusts. Given the complaints about Judaism and eastern cults seducing women away from their husbands' religions, it is also possible that charges of sexual impurity [cf. 4:7] could have been raised against the sponsors of Egyptian, Jewish and Christian religious associations in Thessalonica; cf. Acts 17:4.) Religious and philosophical charlatans were widespread in the ancient Mediterranean, and genuine philosophers were thus at pains to distinguish themselves from the phony variety by denying these characteristics.

2:4. This contrasting style ("not . . . but") was a common way of emphasizing the point, whether or not these exact charges had been leveled against Paul and his companions. Pleasing God rather than people was an important part of *Diaspora Jewish ethics. Divine authorization and inspiration were accepted as a sure sign that one was not a charlatan, although not everyone who claimed such inspiration was believed.

2:5. Despite the encouraging proem (opening) in this letter (1:2-10), Paul disclaims dishonest flattery. Selfish sages were often guilty of flattery, which could earn them more money by begging or employment; demagogic politicians likewise catered to the masses, becoming "all things to all people" (cf. comment on 1 Cor 9:19-23). But most philosophers and moralists complained that flattery was not for the hearers' good; although one should speak gently, a true teacher ought to correct faults boldly. Contempt for flatterers is thus one of the most common characteristics of ancient moral literature (cf. also Prov 28:23; 29:5).

2:6. Sages claimed the right to rule all things because of their wisdom. Openly seeking honor for oneself was seen in a negative light, although competition for honor was rife.

2:7. Well-to-do Romans often had slave or free wet nurses to care for young children, as did some, though fewer, lower-class Romans. According to the ideal of the educated Romans who could afford them, wet nurses should be educated so they could teach the young children; their most important trait, however, was their gentleness. They often endeared themselves to young children, who when they grew older frequently freed those nurses who had been slaves. The harshest Cynics criticized those who were gentle like wet nurses or the aged; other thinkers, like Dio Chrysostom, insisted that such gentleness should be cultivated.

Many moralists, e.g., *Plutarch, recommended that mothers nurse their own children rather than delegate the task to nursemaids, and this was no doubt the common practice for most people, who could not afford wet nurses anyway. The image could thus be one of a nursing mother, although all Paul's hearers would have known of the custom of wet nurses as well. The particular image—wet nurse or nursing mother—does not affect Paul's point: gentleness. People in the eastern Mediterranean, where nursemaids were less frequent, often considered mothers more affectionate than fathers (see *4 Maccabees 15:4), although Roman culture frequently emphasized mothers' severity.

Although flattery was to be avoided (2:5), Dio Chrysostom and others despised vulgar Cynics who simply cursed those from whom they were begging; one should mix praise with the blame, making one's message gentle enough for the hearers to be able to respond to it. (Paul's extant letters include no complete "letters of reproach," the harshest form of blame in ancient *rhetoric.)

2:8. Dio Chrysostom claimed that a true philosopher (like himself, he noted) would give no thought for personal danger but speak truth out of concern for his hearers. Others expressed affection in saying they loved their hearers as themselves or wishing to be able to die for them. In contrast to most writers who made such claims, Paul had demonstrated the truth of his claim to endanger himself for the Thessalonians while he was among them.

2:9. The Thessalonian Christians were mostly poor (cf. 2 Cor 8:1-2) and did not share some of the Corinthians' objections to manual labor (see comment on 1 Cor 9:6). The Christians in Philippi had sent him funds while he was in Thessalonica (Phil 4:15-16), but Paul still had to labor as an artisan. Because he could have set up shop in the marketplace, he could have done work and gained customers even if he was there only a brief time (cf. Acts 17:2, though Paul may have remained in Thessalonica longer than he spoke in the *synagogue). Many Jewish teachers in this period had another trade besides teaching, often learned from their fathers.

"Night and day" was a common phrase, which could mean parts of the night and parts of the day. A manual laborer began work around sunrise and could talk with visitors while working; but from the early afternoon on Paul could use his time for more direct evangelism.

2:10-11. Although Romans valued the dignity of the stern public man, most ancient portrayals of fathers (including Roman ones) stress their love, indulgence and concern for their children. True philosophers compared their concern for their hearers to that of a father as well as to that of a nurse (2:7), and *disciples often saw teachers as paternal figures.

2:12. "Worthy" can mean appropriate to the dignity or standards of the person being honored (see comment on Col 1:10-11); Jewish wisdom texts sometimes spoke of the righteous being "worthy of God" (e.g., Wisdom of Solomon 3:5; 6:16). To new Christians who could no longer participate in the civic cult that honored the emperor in Thessalonica (1:9), God's "*kingdom" may have had political overtones; recognizing their greater allegiance to God's kingdom would be costly (see comment on Acts 17:7).

2:13-16
Nature and Cost of the Thessalonians' Reception

Far from being non-Pauline, as some scholars have suggested, this paragraph reflects Paul's apocalyptic expectations of judgment on Israel. Against the interpretation of some scholars, Paul does not here deny that the remnant will be saved or that Israel will turn in the end time (Rom 11). His words instead fit the *apocalyptic Jesus tradition (the body of Jesus' sayings about the end time) that Paul uses later in the same letter (1 Thess 4:13–5:11). *Digressions were a common feature of ancient writing.

2:13. Antiquity was replete with stories about people who rejected divine messengers, thinking them only charlatans; Paul is grateful that the Thessalonians embraced himself and his companions more appropriately.

2:14. Virtue was often taught by advocating imitation of a good example. The Thessalonian Christians were persecuted by others in Thessalonica, as Judean Christians were by Judean non-Christians (as Paul of all people could attest—Gal 1:13). That Paul's readers have had some problems with the local Jewish community is also likely (Acts 17:5-7); although they did not make up the majority of the church's opposition (Acts 17:8), they would account for the elaboration on Jewish opposition in verses 15 and 16.

2:15. The Jewish people nurtured the tradition that their ancestors had killed the prophets (Neh 9:26), intensifying the *Old Testament account. Opposition to missions-minded, Greek-speaking Jewish Christians had been increasing among Palestinian Jews as Jewish-Gentile tensions increased there (see comment on Acts 21:20-22 describing a situation that existed within a decade of this letter). Jewish practices led Jewish people to

band together in an often-hostile environment, leading many *Gentiles to accuse them of hatred toward humanity; but Paul's meaning here is quite different, referring only to their opposition to the Jewish Christian missionary outreach to the Gentiles.

2:16. "Filling up the measure of sins" (NASB) is an Old Testament idea (e.g., Gen 15:16) also used by Jesus (Mt 23:32). In keeping with Paul's teaching elsewhere (Rom 11), "wrath has come on them to the end" (the literal translation) may mean "wrath has come on them until the time of the end" (cf. Lk 21:9, 23), rather than "forever," or simply the equally natural "fully" or "finally" (cf. "at last"—NIV, NRSV, GNT). The Old Testament prophets said that after many judgments the remnant of Israel would turn with their whole hearts toward God, and then he would restore his people and bring in the new age of his rule (e.g., Jer 29:11-14; Ezek 34:11-31; Hos 14:4-7; Amos 9:11-15).

2:17–3:10
Longing for His Friends

Emotion was appropriate even in persuasive speeches and letters of friendship; Paul's letters are full of emotion, and this passage is one of the clearest examples of it.

2:17. Letters of friendship commonly expressed a longing to see the other person and often noted that they were apart only in body, not in spirit. (Today we might say, "My heart is with you.") Paul goes even beyond these conventions by protesting (literally), "We were orphaned without you" (see NRSV); though emphasizing gentleness, many philosophers would have considered such language *too* passionate.

2:18. Ancients sometimes spoke of Fate hindering them. Given the geographical proximity of Paul to Macedonia, "*Satan's hindering" (KJV) here may refer to some concrete obstacle preventing his return to Thessalonica—either the Jewish opposition he mentioned in 2:14-16 or opposition from city magistrates and its consequences for his friends there (Acts 17:8-9).

2:19-20. Crowns and garlands were used for rewards throughout Jewish and Greco-Roman literature of this period; not a royal crown but a victor's wreath is in view. Crowns (cf. Is 28:5; 62:3) and garlands (cf. Is 61:3) sometimes appeared as symbols of future reward in the *Old Testament and in ancient Judaism. Paul's reward, however, is simply the perseverance of the Thessalonians themselves (cf. similarly 3 John 4).

3:1-2. Letters of friendship often expressed longing to see another person, sometimes even grief over being separated. Even when the expressions were formulaic, they were usually no less genuine (compare modern greeting cards for various occasions). Timothy and possibly Silas rejoined Paul in Athens, and he dispatched them back to Macedonia while he labored alone in Athens. Luke omits some of these details in the account in Acts (Acts 17:14-16; 18:5), as one would expect; any author who has written a readable *narrative knows that one cannot report every detail and must smooth the narrative out. But the correspondences between the accounts are striking, while the divergences indicate that Luke probably did not derive his account from this letter.

3:3-4. Jesus, the Old Testament and some Jewish *apocalyptic writers had predicted a period of sufferings just before the impending end of the age. These sufferings would accompany the *gospel's proclamation (according to Jesus; cf. Mk 13:9-11) and help bring about the *repentance of Israel (according to the Old Testament, e.g., Jer 30:7; Dan 12:1; cf. Deut 4:30; Is 26:20-21). If this is in view here, Christians were destined to endure this suffering but were also destined to escape the wrath at the Second Coming (1:10; 5:9; cf. Acts 14:22).

3:5-8. Letters often displayed affection by reporting the author's sorrow over not being together (e.g., Oxyrhynchus papyri 528.6-9). Ancient letter writers often complained that their feelings were hurt when they did not receive letters back promptly; this complaint was meant as a sign of their affection. Because letters had to be carried by travelers, Paul would not expect to have heard from them, especially if they had not known where to find him; it would be easier for him to send someone to them than the reverse. Yet his complaint about not knowing their situation expresses affection, like that of a worried parent. On "living" in verse 8, see comment on 2:8. Letter writers sometimes showed affection

by emphasizing that they were well if only their addressees were (*Cicero, *Letters to Friends* 12.12.1; 12.13.1; 13.6a.1; 14.8.1; Pliny, *Epistles* 5.18.1).

3:9-10. Paul resumes, completes or adds a thanksgiving (see comment on 1:2); cf. Psalm 116:12. Most people slept during the night, and prayer during the night was a mark of special devotion in the Old Testament and Jewish literature (e.g., Ps 22:2; 42:8; 63:6; 77:2, 6; 119:55, 148). "What is lacking" in their faith (3:10) might be adequate hope (3:6; cf. 1:3; 5:8), which Paul seeks to supply in 4:13–5:11.

3:11-13
Paul's Prayer

In most letters, the prayer immediately follows the thanksgiving; because the prayer in 1 Thessalonians begins in 3:11, some commentators suggest that Paul finishes the thanksgiving only in 3:9-10. But Paul might simply be following a format in this letter different from his later, more customary one.

3:11. "Wish-prayers" ("Now may God . . . " addressed to those for whom the prayer is offered) were considered genuine prayers in Judaism and were offered with the expectation that God would hear them. Paul continues the motif of longing in verse 11.

3:12. Thanksgivings and prayers could introduce topics to be taken up later in the letter, especially in Paul's letters; he returns to "love" in 4:9 and to "outsiders" in 4:12.

3:13. The *Old Testament, Judaism and Jesus' teaching also looked forward to a future hope that gave meaning to endurance in the present. The "*saints" or "holy ones" here could refer to God's people (4:14) or to the holy angels (Zech 14:5; cf. **1 Enoch* 1:9); both were called "holy ones" regularly in Jewish literature. Paul usually uses the term for the former.

4:1-8
Sexual Purity

The issue throughout this passage is adultery (4:6). Paul may have heard of a specific instance in the congregation, or he may still be concerned because of the known sexual looseness of pagans, reinforced during his stay in proverbially immoral Corinth. Unmarried Greek men (i.e., Greek men below the age of thirty) commonly indulged in intercourse with prostitutes, slaves and other males; non-Christian Greek religion and culture did not provide any disincentive for doing so.

4:1-2. Paul here uses ancient Jewish and Christian language that sometimes designates the passing on of an earlier teacher's words. Paul and his companions spent much of their time in Thessalonica teaching the new believers Jesus' sayings, to some of which he plainly appeals in 4:13–5:11. Speakers often invoked deities when they urged others (e.g., Isaeus, *Menecles* 47: "I entreat you by the gods"), as Paul here exhorts by Jesus.

4:3. Greek and Roman practice allowed for intercourse with prostitutes and slaves; premarital sex was prohibited for males under Roman law only if an aristocrat were doing it with an upper-class woman (this was called *stuprum*). Judaism was much stricter, reserving sex for marriage (although ancient sources indicate that some Jewish men did fall prey to premarital and extramarital temptations). Paul condemns all sexual immorality, although he moves to a specific example in 4:6. He shares the *Old Testament view that premarital sex with someone other than one's future spouse is adultery against one's future spouse and thus is as sinful as adultery after the wedding (under the law, a capital offense; Deut 22:13-29).

4:4. "Vessel" (KJV, NASB) was commonly used as a metaphor for one's "body" (NIV, NRSV) in Greek and *Diaspora Jewish literature; it was occasionally applied to one's wife (in some Jewish texts and, on one interpretation, in 1 Pet 3:7). It probably means "body" here, although the matter is debated. Proper treatment of one's sexuality was a matter of serious honor and shame (among Greeks and Romans, especially for women).

4:5. Adopting more *ascetic Greco-Roman ideals, some Diaspora Jewish writers decided that sex was permissible only for procreation, and passion even toward one's wife was unacceptable. Because Paul elsewhere sees marriage as the only appropriate place to release passion (1 Cor 7:2-9), it is more likely that he opposes only adulterous passion (1 Thess 4:6), not sexual pleasure in marriage. Jewish people viewed nearly all *Gentiles as sexually immoral (later *rabbis even argued that one could not assume the virginity of a Gentile

woman over three years and one day old); some other groups also viewed outsiders as immoral, though by biblical standards, most Gentile men *were* immoral. Although many of Paul's hearers are ethnically Gentiles, he expects them to recognize that they are spiritually non-Gentiles by virtue of their conversion to the biblical faith (cf. Rom 2:29; 4:12).

4:6. Adultery, or "wife stealing," as it was often considered, was shameful and punishable by banishment under Roman law; in some circumstances, a couple caught in the act could be killed on the spot. Adultery seems to have been common and usually unpunished, however; but a Roman husband who learned that his wife was committing adultery was required by law to divorce her or himself be prosecuted on the charge of *lenocinium*—"pimping." Palestinian Judaism could no longer execute the Old Testament death penalty for adultery, but Jewish people believed that what they could not execute, God would (especially on the day of judgment).

4:7. From the standpoint of many temples in ancient culture, intercourse made one ritually impure for a time. This impurity could be extended metaphorically, however, to spiritual impurity in the case of sexual sin (cf. also the *Septuagint of Lev 20:21; *Testament of Joseph* 4:6; perhaps *1 Enoch* 10:11). "Sanctification" (NASB) or "holiness" means being "set apart" to God; Israel in the Old Testament was "set apart" and exhorted therefore to *live* as if they were set apart (to be holy as God was holy; e.g., Lev 20:24-26).

4:8. The *Holy Spirit's major roles in Jewish texts included inspiring *prophecy and purifying the righteous; the latter was particularly prominent in *Essene literature and based especially on Ezekiel 36:25-27. Even someone unfamiliar with this role of the Spirit, however, would catch Paul's point from the title (*Holy Spirit*); although Old Testament writers call the Spirit of God "the Holy Spirit" only twice, this had become a common title by Paul's day. Paul has in mind the Spirit who purifies and sets apart God's people (1 Thess 4:7).

4:9-12
Behavior Toward One Another and Outsiders

4:9-10. Moralists often wrote on the topic "on love of family" and similar themes. For Paul, all Christians were also one family and the ethics of familial love should apply. Many extended the title "brother" to intimate friends or members of a committed in-group (see comment on Acts 9:17). Thessalonica was a prominent city of Macedonia. One who offers advice could graciously add that it was superfluous to offer it, because the person would surely do it anyway (e.g., Galen, *Avoidance of Grief* 79b).

4:11. On working with the hands, see comment on 1 Corinthians 4:12. Landowning aristocrats despised manual labor, but for most of the ancient world manual labor was the only means of livelihood. Although the Thessalonian *church may have included a few well-to-do benefactors (Acts 17:4, 9), Paul seems not to have encountered there the opposition to his views on manual labor that arose in Corinth.

Minding one's own affairs and clinging only to one's own philosophical community were central to *Epicureanism but also came to characterize a number of other people in the first century who remained aloof from public or political life. Complete quietism of this sort drew criticism from the rest of society, just as Jewish allegiance to its own customs and people did.

In the broad sense of avoiding public controversies, however, "leading a quiet life" was wise guidance for a persecuted minority in the first-century Roman Empire. Some writers such as *Plutarch advocated the involvement of wise men in the affairs of the state, but even they advised certain people (e.g., those who had already enjoyed a full political career) to withdraw from active service. Paul asks his hearers to be inconspicuous, not monastic.

4:12. Treating outsiders appropriately ("behaving properly toward outsiders"—NASB, NRSV) may mean that Paul does not only not want them destitute but also (given cultural attitudes) not known for dependence on wealthy benefactors. Many poor people lived in Thessalonica, and unemployment was high there. Begging on the street normally characterized only the poorest, often propertyless persons (and *Cynic philosophers; cf. comment on 2 Thess 3:11-12).

4:13-18
Comfort for the Grieving

People in antiquity often wrote letters of consolation. Paul loads this consolatory section of his letter with Jewish *apocalyptic motifs taken directly from Jesus' teaching. (Given the vast number of apocalyptic motifs Paul omits, and that most of those he includes coincide with the oral tradition of Jesus' teaching later recorded in the Gospels, there can be little doubt as to his source—see 4:15. Given the many prophets and hence prophecies in the early *church, it is quite improbable that Paul and the Gospel writers simply drew on the same *prophecy of someone other than Jesus; it is also unlikely that the Gospel writers would have known of 1 Thessalonians, or if they had, that they would have modeled their reports of Jesus' teaching after it.) Appealing to Jewish future hopes was a natural approach in consolation, as Jewish tomb inscriptions attest. Table 7 shows some parallels between 1–2 Thessalonians and Jesus' teachings reported elsewhere.

Although a number of these motifs appear in other early Jewish sources, none appear with such frequency together in one book (much less one chapter) as to leave any doubt that Jesus' teachings are Paul's direct source here. (Likewise, many conventional Jewish end-time motifs, such as mutant babies, are absent.) In the light of the local persecution that this letter addresses (1:6; 2:14-16; 3:3-6), some scholars have suggested that those in the congregation who died since Paul's departure died as martyrs. Martyrdom must have been the exception rather than the rule around A.D. 50; it would not have taken many exceptions, however (as martyrs or dying otherwise), to provoke questions among the Thessalonian Christians.

4:13. Philosophers often "consoled" the recipients of their letters by saying, "Do not grieve," or "Do not grieve too much," since "it will not do any good." This is not, however, Paul's point; rather, it is that Christians do not grieve for their fellow Christians as non-Christians grieve, because Christians have hope. Most Gentiles believed in a shadowy afterlife in the underworld and did not share the philosophers' optimism or neutrality toward death. Most Gentiles grieved, and Jewish and other Near Eastern peoples engaged in very cathartic grief rituals. "Sleep" was a common euphemism for death.

4:14. Like many Jewish people, Paul believed that the soul lived in heaven till the *resurrection of the body, and that soul and body would be reunited at the resurrection (2 Cor 5:1-10). Many ancient writers distinguished the upper atmosphere ("aether") where pure souls would reside, from the lowest heaven, the realm of "air." Thus here the Lord descends from "heaven," meaning the highest heavens (4:16), and meeting his people in the "air," the lower atmosphere (4:17; cf. comment on Eph 2:22).

4:15. "Word of the Lord" in this case means a saying of Jesus (cf. Lk 22:61; Acts 20:35; 1 Cor 7:10). Jesus spoke of his "coming" (e.g., Mt 24:27), a term that could apply to the visit of a king or royal dignitary, which was celebrated with great pomp and majesty.

4:16-17. In the *Old Testament, trumpets (shofars, rams' horns) were used especially to gather the assembly or give orders for battle; in this context, both connotations may be in view. Roman armies also used trumpets in war; Jewish views of the end time included Israel being gathered with a trumpet and trumpets used in the final war at the same time (daily Jewish prayers; the *Qumran War Scroll). Michael, the chief archangel of Jewish literature, was considered Israel's guardian angel and thus figures in Jewish texts about the final battle; here Jesus seems to assume Michael's role on behalf of believers, God's people.

The "clouds," "trumpet" and possibly "archangel" allude to a saying of Jesus about the end time (Mt 24:30-31); the meeting in the air may be inferred from the gathering to join him (Mt 24:31). Judaism traditionally associated the *resurrection of the dead with the end of this age and the inauguration of the *kingdom, and readers would assume this connection in the absence of a direct statement to the contrary. When paired with a royal "coming" (see comment on 1 Thess 4:15), the word for "meeting" in the air normally referred to emissaries from a city going out to meet the dignitary and escort him on his way to their city. The contrast that this image provides with the honor thought to be particularly due to the "Lord" Caesar and his emissaries could well have provoked hostility from local officials (cf. 2:12; 5:3; Acts 17:7).

Table 7. Parallels Between 1–2 Thessalonians and Jesus' Teachings

Themes	Jesus' teachings in the Gospels or elsewhere	1 Thess 4	2 Thess 2	Sources before these documents
Temple destroyed	Mt 24:2; cf. 23:38; 24:15; Mk 13:2; Lk 13:35	–	–	Some traditions; views on Dan 11:31; 12:11
Temple desecrated	Mt 24:15; Mk 13:14	–	2:4	–
False prophets	Mt 24:5, 11, 24; Mk 13:6	–	2:9	One common motif in end-time woes
False prophets' signs	Mt 24:24; Mk 13:22	–	2:9	–
Eschatological "distress"	Mt 24:21, 29; Mk 13:19, 24	(3:3)	(1:4, 6)	Dan 12:1
Birth pangs	Mt 24:8; Mk 13:8	5:3 (though probably applied differently)	–	Possibly eschatological idiom (cf. e.g., 1QH 3.3-18)
Lawlessness	Mt 24:12	–	2:3, 7-8	One common motif in end-time woes
Apostasy	Mt 24:10, 12; Mk 13:12	–	2:3	One common motif in end-time woes
Parousia	Mt 24:3, 27, 37, 39	4:15; cf. 2:19; 3:13; 5:23	2:1, 8 (cf. 2:9)	–
Coming on clouds	Mt 24:30; cf. 26:64; Mk 13:26; cf. 14:62	4:17	–	Dan 7:13
Trumpet for gathering	Mt 24:31	4:16 (also 1 Cor 15:52)	–	Familiar image (e.g., Is 27:12-13; cf. **Psalms of Solomon* 11:1-4; *Shemoneh Esreh* 10)
Gathering	Mt 24:31; Mk 13:27	(4:15-17)	2:1	Familiar Jewish expectation
Unknown time	Mt 24:36; Mk 13:32	5:1-2	–	A strand in Jewish expectation
Unknown "times and seasons"	Acts 1:7	5:2	–	–
Unexpected destruction	Mt 24:38-41; Lk 17:26-30, 34-35	5:3	–	–
Coming like a thief in the night	Mt 24:43; Lk 12:39	5:2-4 (cf. 2 Pet 3:10)	–	–
Stay alert (in explicitly eschatological context)	Mt 24:42; 25:13; Mk 13:33-37; Lk 12:37-38; 21:36	5:6	–	–
Asleep	Mk 13:36	5:7, 10	–	–

Table 7 is adapted from Craig S. Keener, *The Historical Jesus of the Gospels* (Grand Rapids: Eerdmans, 2012), pp. 366-71.

The "shout" is undoubtedly the commander's shout of war (Amos 2:2), an image applied to God as warrior in the Old Testament (Is 42:13; cf. the shout of triumph with a trumpet in Ps 47:5, 8-9), as is his descent (Is 31:4; cf. Zech 14:3-4). From the earliest *New Testament sources, Old Testament imagery about God's coming in the day of the Lord is applied directly to Jesus; Judaism envisioned this role as God's, not the *Messiah's. "Clouds" were used both as imagery for the coming day of God's judgment (e.g., Ezek 30:3; 32:7; Joel 2:2; often the clouds are the smoke of battle and pillaging) and the coming of the *Son of Man (Dan 7:13).

4:18. Writers of letters of consolation (mentioned in, e.g., *Cicero, *Letters to Atticus* 13.20) sometimes urged their readers to "comfort" (KJV, NASB; or "exhort," "encourage") themselves and others with their words. (Funeral speeches especially praised the deceased, but often also offered comfort to the bereaved.) In the same way, Jewish people recognized that committed servants of God could exhort one another to stand firm in the face of suffering and martyrdom (2 Maccabees 7:5). Even the majority of the Old Testament prophets who wrote most fiercely of judgment included words of comfort and hope for the righteous remnant of God's people, and hope is central to Paul's message about the future for his readers, who make up such a remnant.

5:1-11
Watchfulness

Paul continues his discussion of the Lord's coming (4:13-18), ending on the same exhortation to comfort or encourage one another (4:18; 5:11).

5:1. Here Paul cites another saying of Jesus (later recorded in Acts 1:7; writers normally paraphrased sayings when quoting them). The general thought—that the time of the end was unknown—was common enough in other Jewish circles; teachers debated whether the righteous could hasten the time of the end or whether it would simply come in the time that God had ordained, but most agreed that people could not know the time of the end. Some Jewish writers, however, worked up elaborate schemes to predict that it was about to occur; Paul does not subscribe to such theories.

5:2. This verse is another saying of Jesus (Mt 24:43; also used in 2 Pet 3:10; Rev 3:3; 16:15; cf. Joel 2:9, but there is no close parallel in Jewish sources before Jesus). "The day of the Lord" in the *Old Testament was the day of God, the judgment at the end of the age (sometimes prefigured in nearer judgments, but ultimately cataclysmic in its final form; cf. Ezek 30:3; Joel 3:14; Obad 15). Jewish *apocalyptic literature commonly spoke of an unexpected end, yet one that was preceded by signs. Paul does not mean that no signs can precede the day of the Lord (2 Thess 2:2-4)—only that they will not pinpoint the time or provide sufficient warning to the wicked (1 Thess 5:3-4).

5:3. These "birth pangs" are not the initial or age-long ones of Matthew 24:8, but the final pangs of destruction in the day of the Lord (cf. Is 13:8). Birth pangs were a common image of agony and destruction (Ps 48:6; Is 21:3; 26:17-18; 42:14; Jer 4:31; 6:24; 13:21; 22:23; 49:22-24; 50:43; Hos 13:13). Sudden destruction was also a common biblical idea (Is 47:11; Jer 6:26), and unexpected judgment on the wicked became a regular motif of Jewish apocalyptic; but given the other echoes in the context Paul may here especially reflect Jesus' teaching (Mt 24:36-44).

The Jewish people knew well about false peace: false prophets prophesying peace had led to Judah's judgment in the Old Testament (e.g., Jer 6:14); the first-century B.C. Roman general Pompey had entered Jerusalem falsely pretending peace; and roughly two decades after Paul wrote this letter, false prophets of victory led the Jerusalemites to slaughter at the hands of Titus's Roman army. Paul's hearers in Thessalonica, however, could take his words as an attack on claims of earlier Roman emperors to have established peace and security (*pax et securitas*) throughout the empire. Teachings like this one sounded subversive and may have aroused persecution against Christians (Acts 17:7).

5:4-5. The background to these verses is quite natural: Paul extends the image of the day of the Lord coming as a thief in the night (see comment on v. 2). Thieves normally broke in at night, but believers in Jesus were people of the day of the Lord. Paul parallels day with light and night with darkness, using common images for good and evil in his day. "Children

of" (KJV, NRSV, NIV) was a way of saying "people characterized by."

5:6-7. Night was the time for both sleeping and drunken parties. Paul may draw on the sayings of Jesus in Matthew 24:42, 49 and 26:45, besides the obvious Matthew 24:43. Other moralists also used "sobriety" metaphorically.

5:8. Roman guards and other kinds of night watchmen (such as shepherds) were the only people who stayed awake at night, apart from those engaging in drunken revelry. Paul's armor imagery may also reflect the standard Jewish idea of a final war preceding the end and the military imagery used by moralists concerning their struggle with the passions (see comment on Rom 13:12; cf. also comment on Eph 6:10-20).

5:9. Although "salvation" could mean "deliverance," in the context of the final salvation it would also be associated with the bodily *resurrection of the righteous, as here. Judaism juxtaposed this resurrection with the wrath God would pour out on the *Gentiles and disobedient Jews at his coming to judge the earth, which they expected would occur at the same time.

5:10. On the image of "sleep," see comment on 4:13 (it cannot allude to the image of 5:5-7, where it refers to the people of darkness).

5:11. See comment on 4:18.

5:12-22
How to Behave Among God's People

Verses 12-15 deal with how to treat one another; verses 16-22 address corporate (and partly private) worship (cf. similar exhortations to corporate worship in Eph 5:18-21, followed by household codes).

5:12-13. The term for those who "have charge" (NASB, NRSV) or "are over" (KJV) the Thessalonian Christians can refer to oversight more generally, but was also sometimes applied in the Greco-Roman world to *patrons, sponsors of *clients and religious associations. If that sense is in view here, these would be the Christians who opened their homes for the *churches to meet in them and sponsored them, providing what financial and political help they could (the Thessalonian patrons probably included Jason—Acts 17:5-9).

That they would also "admonish" (not just "instruct"—NASB, GNT) is not unusual, since they would probably be the wealthier members of the congregation and hence better educated. (Most people in antiquity were functionally illiterate; exhorting was generally easier for those with the training and leisure to read the Scriptures, since the Scriptures were the source of exhortations in both *synagogue and church.) If no one was particularly well-to-do, those who were relatively better off would have to perform the functions of patron as best they could, requiring either smaller or more crowded house churches; but the congregation probably included relatively well-to-do people (Acts 17:4).

5:14. The "unruly" (KJV, NASB) are the undisciplined—"idlers" (NRSV) or "those who are idle" (NIV) who can work but refuse to do so (cf. 4:11; 2 Thess 3:7-8). The word for "faint-hearted" (NASB, NRSV, NIV) or "timid" (GNT) referred especially to those who were self-denigrating, who had a low opinion of themselves. Cf. Isaiah 35:3-4.

5:15. Compare Jesus' teaching (Mt 5:39); some other Jewish teachers also advised nonretaliation (see comment on Rom 12:17).

5:16. Greek ethics often listed succinct statements one after another as Paul does here. Many biblical psalms associate rejoicing with celebration and worship (e.g., Ps 9:14; 33:1; 47:1; 95:2; 149:1-5); here it is thus naturally linked with prayer and thanksgiving (1 Thess 5:17-18).

5:17. Even the strictest pietists of Judaism did not pray all day; but they prayed regularly, much and faithfully. "Pray without ceasing" could mean this type of prayer or to carry the attitude of prayer with oneself throughout the day, not just in corporate worship or personal quiet times.

5:18. Pagans who recognized that Fate or some god was sovereign over everything acknowledged that one should accept whatever comes or even give thanks for it. For Paul, those who trust God's sovereignty and love can give thanks in every situation.

5:19-20. Most of early Judaism associated the *Spirit especially with *prophecy; Paul does not want anyone quenching genuinely inspired speech. The term translated "quench" was often used with fire, which appropriately fits one *Old Testament image of prophets unable to repress God's inspiration (Jer 20:9).

5:21-22. In the context, "test them all" (NIV) may mean test prophetic utterances (5:19-20), retaining the good but rejecting the bad. *Perhaps* because some Greek religious cults practiced ecstatic inspiration, Paul warns the Thessalonians not to confuse their inspiration with that of paganism; but judging prophecy was already an issue in the Old Testament. In the Old Testament, many prophets were trained under senior prophets, guided in their sensitivity to the Spirit's inspiration (1 Sam 19:20); because such senior prophets were not available to most early Christian congregations, mutual testing by others moving in the prophetic gift was necessary (see comment on 1 Cor 14:29).

5:23-28
Concluding Words

5:23-25. On "wish-prayers," see comment on 3:11. Although Paul emphasizes the *whole* person here by listing component parts in good Jewish fashion (cf., e.g., Deut 6:5; Lk 10:27), he uses the language of his culture to describe the parts (which he can divide differently elsewhere, e.g., 1 Cor 7:34; 14:14-15). He is quite unlike the philosophers who constructed detailed analyses, dividing the soul into two (*Cicero), three (*Plato, *Philo) or eight (*Stoics) components. Like most Jewish writers and the *Old Testament, Paul saw people especially as a whole, with body and soul separated at death, and distinguished various components only as needed. (Valentinian *Gnostics, mainly under Middle Platonic influence, later made much more of the differences between soul and spirit, and thus "soulish" and "spiritual" persons, than Paul intended here; their radical distinctions led them to deny the full incarnation, or enfleshment, of Jesus the Word. Some philosophers advocated a form of trichotomy [three parts], although they did not tend to use Paul's wording here.)

5:26. Kisses were a common affectionate greeting for those with whom one had an intimate or respectful relationship; see comment on Romans 16:16.

5:27-28. Many people could not read, so reading his letter aloud was the only way everyone in the congregation could be acquainted with it.

2 Thessalonians

Introduction

Authorship. Some scholars have denied that Paul wrote this letter, because it differs in some respects from 1 Thessalonians; conversely, they attribute the similarities it has with 1 Thessalonians to imitation. But 2 Thessalonians is Pauline in style and moves in the same *apocalyptic world of thought that much of 1 Thessalonians 4–5 does; the differences are no greater than one would expect in two separate letters dealing with such a broad topic, or even than one sometimes finds in passages within a single apocalypse. It seems unlikely that 2 Thessalonians 2:3-4 was written after the temple's destruction (A.D. 70); because *pseudepigraphic letters were rarely written during or immediately after the lifetime of their alleged author, 2 Thessalonians was most likely written by Paul (who died around A.D. 64). The majority of commentators today accept it as Pauline.

Relationship to 1 Thessalonians. Although scholars have debated which letter was written first, most scholars think that 1 Thessalonians was written before 2 Thessalonians (the original letters were not titled or numbered, of course). The bearer of his first letter has probably returned with news about the situation in Thessalonica; some of the Christians have embraced Paul's message about future hope without the qualifications he had attached to it, and have decided that the day of the Lord has already come (2:2).

Commentaries. See those listed in the introduction to 1 Thessalonians. Most commentaries cover both letters.

1:1-12
Introduction, Thanksgiving and Prayer

Paul's letters usually open with the basic introduction ("Paul . . . to . . . "), a thanksgiving and either a prayer or a mention of his prayers for the recipients. Each of these features was typical of letters in his day, but Paul adapts them in a Christian way. Paul also stocks his *apocalyptic language here with phrases from the *Old Testament.

1:1. The basic format of letter openings was: sender's name, to recipient's name; greetings.

1:2. The typical Greek greeting was *chairein,* which Paul adapts to *charis,* "*grace." Jewish letters usually added the typical Jewish greeting of "peace," which functioned as a wish-prayer: "May God's peace be with you," "May all be well with you." (On wish-prayers, see comment on 1 Thess 3:11.) Paul makes this prayer more explicit by adding the source of grace and peace: both God the Father and the Lord Jesus. Both "God" and "Lord" are divine titles in the Old Testament.

1:3. Thanksgivings for the recipients were common in Greek letters and helped establish a friendly tone at the beginning of the letter.

1:4-5. A major theme in Jewish thought by this period, including in apocalypses, was God's reward for the righteous who suffer. Developing this theme from the Old Testament, Jewish writers emphasized that God would punish their persecutors in the end and deliver the righteous, no matter what they suffered now. This deliverance was intimately bound up with the hope of the *resurrection of the righteous at the end of the age. Often the present or imminent tribulation was viewed as the final "messianic birth pangs" that would usher in the era of the *kingdom. Some philosophers also spoke of sufferings proving one worthy of God.

1:6-7. As in Jewish literature, so here the righteous receive rest from their tribulation only at the same time that God vindicates them by his final judgment on the wicked (cf. also Deut 32:34-36, 41). God's coming to judge the world appears in various texts (e.g., Zech 14:3-5), including destruction by fire (e.g., Is 66:15-16, 24; **1 Enoch* 91:7-9). Fire burning one's adversaries was a common image in the Old Testament (e.g., Num 11:1; Ps 97:3; Is 26:11; cf. Jer 4:4; 15:14; 17:4; 21:12; Ezek 21:31; 22:20; Nahum 1:6; Zeph 1:18; 3:8) and continued in Jewish expectations (e.g., **Sibylline Oracles* 3.760-61; 4.43, 161, 176-78). This image was natural because of the use of fire in war and because "wrath" was often described in Hebrew and cognate languages in terms of "burning."

This also became customary end-time imagery in Jewish literature; in some Jewish texts the whole earth would be destroyed, in others the kingdom would be established without such cosmic transformation. The wording here is particularly from Isaiah 66:15 (presumably envisioned as belonging to the same era as the new world and new Jerusalem, Is 65:17-18). The "mighty" angels are envisioned as the Lord's army (cf., e.g., 2 Kings 6:17; *Dead Sea Scrolls 1QM 12.8).

1:8. On God's vengeance or repaying his people's enemies, see Deuteronomy 32:41, Isaiah 35:4 and 66:6; it was also an important theme in post-Old Testament Jewish literature.

1:9. This verse directly echoes the *Septuagint of Isaiah 2:10, 19 and 21 (roughly, "from the face of the fear of the Lord and the glory of his strength"). That Jewish literature often describes God turning his "face" (literally) or "presence" from the wicked may be theologically significant, but Paul directly takes over the Semitic idiom ("from the face of" means "from before," "from the presence of") as the Septuagint of Isaiah rendered it. "Eternal destruction" in the Dead Sea Scrolls (e.g., 1QS 2.15; 1QM 1.5; 9.5-6) and elsewhere (e.g., **Psalms of Solomon* 2:31; 3:11-12; 15:10) usually meant that the wicked were completely destroyed, but in the contexts of many of these passages they also suffered eternally (both could be mentioned in the same passage, e.g., **Jubilees* 36:10; cf. Is 66:24, cited in Mk 9:48).

1:10. Kings' "glory" was their splendor and royal bearing; the glorification of God's people was to be at the time of Israel's restoration (Is 46:13; 60:1-2; 62:2), when God (here Jesus) would come to vindicate them. (Paul normally associates the *saints' "glorification" with their bodily resurrection—e.g., Rom 8:17-23; 1 Cor 15:43; Phil 3:21. For future glory in ancient Jewish texts, see, e.g., **4 Ezra* 7:98; **2 Baruch* 51:3.) "When he comes" echoes the language of the Septuagint of Psalm 96:13, applying lan-

guage about God to Jesus. "On that day" is the "day of the Lord" (see 2 Thess 2:2; cf. Is 2:11-12, 17, 20; 11:10-11; Joel 3:18—"in that day").

1:11. Ancient letters, including Paul's, often contained prayers or mentions of prayers on behalf of the recipients. On "worthy," see comment on 1:5.

1:12. The Lord could be glorified in his obedient people in the present (Jer 13:11), but the ultimate glorifying of God in his people would be on the day when he would bring all things to light (see comment on 1:10).

2:1-12
The Final Rebellion

Some Thessalonian Christians thought that the day of the Lord had been *so* "imminent" that it had already come. To correct their misunderstanding, Paul reminds them of Jesus' sayings he taught them while he was there (2:5, 15): a final period of rebellion constituted an essential prerequisite for Christ's return.

2:1. The "coming" (described further in 2:8; cf. 1 Thess 4:15) and "gathering" here are grammatically linked, and the use of both terms derives from the sayings of Jesus. "Coming" was a common word, but when applied to a king it took on special connotations of a glorious visitation. Some Jewish texts applied it to God's past theophanies and future revelation in glory; Matthew 24:3, 27, 37 and 39 use it for Jesus' return to judge the world. Many texts, both in the *Old Testament (e.g., Is 27:12-13) and later Jewish literature (**Psalms of Solomon* 8:28; 11:2-5; 17:26; *4 Baruch* 3:11), speak of Israel's gathering as God's people; Paul probably takes the image of the gathering of the righteous from Jesus' saying later recorded in Matthew 24:31 and Mark 13:27 (which uses a related term).

2:2. Those who heard Paul's first letter read only once in the congregation may have misunderstood its point. The Greek outlook included an afterlife in the underworld or an escape of the soul to the highest heavens, but not a future event when the dead would be resurrected. Thessalonian Christians may have read Paul in the light of their own cultural predispositions: they may have assumed that the future reality was already fulfilled, not just initiated, in Christ. Paul replies that the future "day of the Lord" is indeed imminent or unexpected in its timing (1 Thess 5:2) but still preceded by the final rebellion (2 Thess 2:3-12).

2:3-4. The first prerequisite is either the "rebellion" (NIV, NRSV, GNT) or the "apostasy" (NASB). If it is a "rebellion" against God, it is the world's final insult to him (2:4); if "apostasy," it refers back to Jesus' sayings later written in Matthew 24:10-13. Both sins are characteristic of Jewish lists of end-time sufferings, but because Paul omits most of the signs found in such lists and focuses only on those cited by Jesus, the term here might mean apostasy. In either case, Paul indicates that the term does not apply to his readers (2:10-15).

In Jewish sources the figure of a general future antichrist (as he is commonly called) seems to occur mainly later, but contemporary Jewish texts do describe some past or present rulers in similar terms (cf. also the evil rulers in Dan 9–11); the tradition of pagan kings who made themselves out to be gods is also quite ancient (Is 14:13-14; Ezek 28:2; Dan 6:7). The *Dead Sea Scrolls speak of a "man of lies" who opposed the founder of their community; the *Psalms of Solomon* portray the Roman general Pompey in such terms; and Roman emperors lent themselves to such portrayals in general. Nearly a decade before this letter, Gaius Caligula had tried to set up his image in the Jerusalem temple, nearly sparking a Judean revolt. (Caligula immediately preceded Claudius, the current emperor in A.D. 41–54.) Two decades after this letter, when Titus destroyed the temple, his soldiers desecrated the temple by paying divine honors to the insignia of Emperor Vespasian on the site of the temple.

The imagery used here derives especially from Jesus, however (cf. Mt 24:15), who took it from Daniel (Dan 7:25; 8:11; 9:26-27; 11:31, 36; cf. 2 Chron 33:7; Ezek 8:3). Some scholars who have examined the prophecies carefully have concluded that Daniel 11 describes the abomination caused by Antiochus Epiphanes; yet the "end" seems to come at that time (12:1), about two centuries before Jesus. Like the promise of the land to Abraham's descendants, deferred repeatedly during the period of the judges, between David and Josiah, and afterward due to Israel's disobedience, this text might be seen as an example of deferred eschatology. The way that some count (and in the first century counted) the period of Daniel 9:24-27, the

anointed prince (whom some held to be the *Messiah) was to be "cut off" around the time that Jesus died; the destruction of the city followed forty years later, again indicating a delay of at least forty years. Christian interpreters differ as to whether (1) a specific future tribulation remains (perhaps 2 Thess 2:8-9), (2) the Jewish war in A.D. 66–70 fulfilled it completely (cf. Mt 24:15-21), (3) the whole course of history constitutes this period (cf. comments on Revelation, especially chap. 12) or (4) the language is reused in different ways, any and all of which ways may be true.

2:5. The Thessalonians apparently misinterpreted Paul's talk about the future *kingdom (Acts 17:7), much of which seems to derive from teachings of Jesus that Paul is transmitting to them (2 Thess 2:15). Ancient works sometimes refer to information shared between writers and their designated readers but obscure to subsequent readers.

2:6-7. The interpretations of this passage are more diverse than those of most passages in the *New Testament. Even the translation is not certain (is the restrainer "taken out of the way" or does the lawless one "come forth from the midst" at the end of v. 7?). Views of the "restrainer" are plentiful. Some have thought that the "restrainer" is one prerequisite for the end stated by Jesus, the preaching to all the nations (Mt 24:14); this view makes some sense, but the completion of this preaching was technically to precede the end itself, not the rebellion that preceded the end.

The "restrainer" could be simply God's sovereign restraint (e.g., Ezek 5:11); it could be the archangel Michael, angelic protector of Israel in Jewish tradition (also Dan 12:1); it could be the presence of Christians in Jerusalem (Mt 24:16-21); or it could be, as many scholars have argued, the ruler preceding the self-deifying emperor or succession of emperors. (Those who hold the last view sometimes suggest that the name of the emperor when Paul was writing this letter was Claudius, which was related to a Latin word for "restrain"; he immediately preceded the persecutor Nero, on whom see introduction to 1 Peter. But Claudius's name resembles more Latin terms for lameness, and most of Paul's Greek-speaking audience in Thessalonica, not a Roman *colony, would not have caught the pun in any case.) Many of the early church fathers took the view that the "restrainer" was the Roman Empire.

One popular modern view that has no specific contextual support is that the "restrainer" is the *church, which had inadequate social power in Paul's day to perform that function. The church's removal from the earth by the *resurrection described in 1 Thessalonians 4:15-17 does not fit this context, because the Thessalonian Christians were to receive rest from affliction only at the day of judgment (2 Thess 1:6-9), and be gathered (2:1) only in the day of the Lord (2:2), which was to be preceded by the rebellion (2:3-4), which in turn was to be preceded by the restrainer (2:6-7). Although no ancient Christian authors attest the view that the restrainer is the church (the idea of a rapture before the tribulation first explicitly appears in history around 1830, as a corollary of traditional dispensationalism), adherents of this view today cite various other New Testament texts for its support.

In any case, the Thessalonians would apparently understand what Paul means (2:5), and his point is not in question: this event has not yet happened, so the rebellion and hence the day of the Lord and the church's gathering are still future.

2:8. Paul describes the end of the lawless one in terms borrowed from Isaiah 11:4 (cf. Hos 6:5) and similar to those in other Jewish texts. Paul contrasts Jesus' own coming (cf. 2 Thess 2:1) with the lawless one's (2:9); on such contrasts see comment on Revelation 13.

2:9. Deceptive signs already occurred in Paul's day. Sorcerers and shrines of healing gods were common; although healing was not the primary focus of the imperial cult, some people in the eastern Mediterranean also invoked the spirit of the emperor, who was worshiped as a god, to deliver or heal them. Propaganda circulated that the emperor Vespasian (to whose insignia homage was paid on the site of the temple in A.D. 70) worked miracles, but emperors themselves were not usually known as miracle workers. Although miracle-working false prophets appear early in the Bible (Ex 7:11), Paul's source for their association with the end is probably again Jesus' teachings (cf. Mk 13:22; Mt 24:24).

2:10-12. In the Old Testament, God often

punished people by giving them the very blindness they had chosen for themselves (Is 19:14; 29:9-10); in Jewish tradition, all the nations chose to turn away from God's truth, and only Israel accepted his *law. *Satan's primary roles in Jewish thought were accuser and deceiver or tempter; for Antiochus Epiphanes's deceit, see Daniel 8:25; for that of idolatry in general, see Isaiah 44:20 and Jeremiah 10:3-5. Philosophers characterized themselves as lovers of truth, and this characterization was accepted as a morally high ideal among the leisured class of Paul's day and probably among others who stopped to listen to public lectures. But Paul, like most Jewish people, believed that God's perfect truth came by revelation, not by humans' finite reasonings.

2:13–3:5
Thanksgiving, Wish-Prayer and Prayer Request

As in 1 Thessalonians 3:9-13, here Paul offers a second thanksgiving and a wish-prayer before moving into the hortatory (exhortation) section of his letter.

2:13-14. In the *Old Testament, God "chose" Israel; *Gentile believers grafted into his people are often called "chosen" in the New Testament (see comment on Rom 9:14-29; cf. Mt 24:31). On the *Spirit (often linked with spiritual purification in segments of Judaism) and sanctification, see comment on 1 Thessalonians 4:7-8. On "glory," see comment on 2 Thessalonians 1:10 and 12.

2:15. Pharisaic Judaism emphasized the careful passing on of traditions from earlier teachers. Paul passed on to the Thessalonian believers the teachings of Jesus, many of which he has alluded to in this chapter (see the introduction to 1 Thess 4:13-18).

2:16-17. Here Paul offers a "wish-prayer," a prayer to God addressed as a wish for a person. Although not directly addressed to God grammatically, such blessings were meant as prayers for God to answer.

3:1-4. The prayer request that God's word may "run" (literally) or "spread" swiftly probably borrows the image from Psalm 147:15. The Thessalonians would think of runners in an athletic competition.

3:5. Paul concludes with another wish-prayer (see comment on 2:16-17).

3:6-15
Dealing with Idlers

3:6. Paul acts "in the name of Jesus"—as his representative. By this period "unruly" (NASB) usually meant "idle" (NIV, NRSV), the clear meaning in this context. The origin of this group of idlers in the *church might be the Greco-Roman aristocratic disdain for manual labor, or *clients or parasites dependent on wealthier *patrons, or a mistaken belief that the day of the Lord had come and canceled the need for such labor (2:2). Alternatively, they may have pursued a philosophic, specifically a *Cynic, lifestyle (see comment on 3:11-12). More certainly, idlers were known to pass their days in the marketplaces of Greek cities (including Thessalonica—Acts 17:5), sometimes easily stirred by demagogues. Some may have been genuinely converted but not given up their previous lifestyle.

3:7-9. Students commonly imitated their teachers. On the labor of Paul and his companions, see comment on 1 Thessalonians 2:9. As some commentators point out, to "eat bread" seems to have been a Jewish figure of speech for "making a living" (e.g., Gen 3:19).

3:10. Although Paul's saying here has no exact parallel, some Jewish and Greek sayings had similar meanings. Judaism had a strong work ethic and a heavy emphasis on charity; Proverbs emphasized both the need to help those who have nothing and for those who are able to work to do so. "Eat" refers either to food provided by other believers (cf. 3:12), as *synagogues cared for needy Jews, or food provided at the churches' communal meals (cf. 3:14), a practice known among religious associations in the Greco-Roman world.

3:11-12. For "eat their own bread," see comment on 3:7-9. "Busybodies" could refer to those engaged in superfluous activity, wasting their time on irrelevant details, or to troublesome "meddlers" (see GNT), or to both. Some Christians may have decided to justify their idleness by citing the lifestyle of traveling sages, such as Paul and his companions. But although Paul and his companions had distinguished themselves from the "bad" Cynic philosophers (see comment on 1 Thess 2:1-12), some Thessalonians may have continued fully in the Cynic vein: unlike Paul, Cynics begged

rather than worked; and with their denunciations of passersby they were certainly "meddlers." Alternatively, they may have followed other models for idleness (see comment on 2 Thess 3:6).

3:13. "Doing good" (NASB, GNT) includes charity, as in Judaism; Paul does not want his readers to misinterpret his limitation of charity.

3:14-15. The synagogue community enforced different levels of discipline, which the churches largely adopted (except for corporal punishment). Even under later rabbinic rules, which allowed less diversity of practice than was common in Paul's day, full excommunication involved treating the person as an infidel, bringing him under a curse (cf. 1 Tim 1:20; 1 Cor 5:5; Mt 18:15-20), but lesser bans that still treated a person as part of the religious community were practiced as well. The *Essenes also had different levels of discipline (1QS 7.1-20 in the *Dead Sea Scrolls).

3:16-18 Conclusion

3:16. This verse and 3:18 are final "wish-prayers"; see comment on 2:16-17.

3:17-18. Forged letters did exist (e.g., *Livy 40.55.1). In law courts, orators often had to argue that documents were forgeries (so *Quintilian, *Institutes of Oratory* 5.5.1), and some commentators have compared 3:17 with 2:2 to propose that Paul here reinforces the suggestion that the Thessalonians check to ascertain which letters were genuine. But most letter writers used *scribes and signed their names at the end (or sometimes added brief comments, e.g., *Cicero, *Letters to Atticus* 8.1), and Paul often follows this practice elsewhere in his letters (e.g., 1 Cor 16:21). That he fears the work of forgers is thus possible but not certain.

1 Timothy

Introduction

Authorship. Among all the letters attributed to Paul in the *New Testament, it is the authorship of the *Pastoral Epistles (1 Timothy, 2 Timothy and Titus) that is the most disputed, although they were widely viewed as Pauline in the early *church. The style is noticeably different from the usual style of Paul's earlier letters: a heavier use of traditional materials (sayings from prior Christian tradition, e.g., the "trustworthy statements" marked by 1:15; 3:1; 4:9; 2 Tim 2:1; Tit 3:8), various literary forms that Paul rarely employs in his earlier letters (e.g., lists of qualifications), significant differences in vocabulary, and so on. Although these differences alone would not necessitate different authors, they have led many good scholars to suggest either that Paul is not their author or (more often favored by many conservative scholars) that he allowed a *scribe or amanuensis considerable freedom in drafting the letter. (It is common knowledge that Paul, like most people, depended on scribes for much of his letter writing—Rom 16:22.) Some have compared the style of the Pastoral Epistles with that of Luke-Acts and concluded either that Luke was the author or that he was the scribe of these letters (cf. 2 Tim 4:11). Especially in 2 Timothy, where the nature of Paul's detention may not have permitted him the materials to write his own letters, an amanuensis (scribe) spending time with Paul, remembering Paul's words and transcribing them in his own terms would make sense. Others suggest that these letters were compiled based on oral memory of Paul's instructions or letters to Timothy and Titus. In any case, all agree that one may speak of "Paul" and his *disciples within the letters' *narrative world. Most individual details of vocabulary and style have some parallels in Paul's earlier letters, although their cumulative effect is different.

*Pseudepigraphic letters (letters falsely ascribed to a great teacher of the past) were a common literary or pedagogic device but were rarely written close to the author's lifetime. Pseudepigraphic epistles and forgeries rarely exhibit the number of personal allusions that appear in 2 Timothy. If 1 Timothy and Titus are "official letters" (cf. comment on 1 Tim 1:2) meant to bolster their respective recipients' authority among their congregations, then the fact that they are more formal than

2 Timothy is understandable. Apart from the special literary forms in 1 Timothy and Titus, these letters may exhibit fewer persuasive *rhetorical devices than Paul's earlier argumentation to churches, perhaps because they are more personal and institutional than directly theological. (Some language similar to that of popular philosophers and moralists remains.)

Situation. Various features sometimes used to argue lateness, such as church offices and the heresy addressed (some scholars read it as second-century *Gnosticism), generally fit as well or better in the circumstances of Paul's time (see comments on specific passages; the heresy need not be Gnostic). Certainly church offices are far less developed than in the early second-century letters of Ignatius. In 1 Timothy, false teachers advocating *asceticism (4:3) based on the *law (1:7) are undermining the work of Paul and his companions in Ephesus (1:3). (Although Ephesus was in Asia Minor, it was culturally more Greek than Anatolian by this period; its particularly Greek culture is presupposed in the following treatment of the background.) Central to Paul's solution to this problem is the appointment of church leaders especially qualified to address the heresies spreading in the church. Paul employs the sorts of stereotypical language normally used to address such situations in his day (e.g., by philosophers against sophists or pseudophilosophers).

Date. On the premise of Pauline authorship, the Pastorals were written toward the end of his life, about A.D. 62–64. This would mean that Paul was released from his detention described in Acts 28:30-31 and completed the journeys presupposed in the Pastoral Epistles, as suggested also by early Christian tradition. Some who date these letters later than Paul date them late enough to allow for the reuse of Paul's name pseudonymously, sometimes as late as the mid-second century (although the Muratorian Canon assumes them to be Pauline not long after that date). Others suggest that the material is Pauline but was organized into its current form more quickly after Paul's death.

Commentaries. Among technical commentaries that provide much background are Benjamin Fiore, *The Pastoral Epistles* SP 12 (Collegeville, MN: Liturgical Press, 2007); Luke Timothy Johnson, *The First and Second Letters to Timothy*, AB 35A (New York: Doubleday, 2001); I. Howard Marshall with Philip H. Towner, *A Critical and Exegetical Commentary on the Pastoral Epistles,* ICC (Edinburgh: T & T Clark, 1999); William D. Mounce, *Pastoral Epistles,* WBC 46 (Nashville: Thomas Nelson, 2000); Jerome D. Quinn and William C. Wacker, *The First and Second Letters to Timothy* (Grand Rapids: Eerdmans, 2000); and Philip H. Towner, *The Letters to Timothy and Titus,* NICNT (Grand Rapids: Eerdmans, 2006). Very valuable commentaries on a more popular level include Gordon D. Fee, *1 and 2 Timothy, Titus,* NIBC (Peabody, MA: Hendrickson, 1988); Jouette M. Bassler, *1 Timothy, 2 Timothy, Titus,* ANTC (Nashville: Abingdon, 1996); J. N. D. Kelly, *A Commentary on the Pastoral Epistles,* HNTC (Grand Rapids: Baker, 1981); Luke Timothy Johnson,

1 Timothy, 2 Timothy, Titus (Atlanta: John Knox, 1987); and George T. Montague, *First and Second Timothy, Titus,* CCSS (Grand Rapids: Baker Academic, 2008). I provided some of my primary sources on 1 Timothy 2 in Craig S. Keener, *Paul, Women and Wives* (Grand Rapids: Baker Academic, 1992), pp. 101-32; for 1 Timothy 3:1-7 and chapter 5 in Craig S. Keener, . . . *And Marries Another: Divorce and Remarriage in the Teaching of the New Testament* (Grand Rapids: Baker Academic, 1991), pp. 83-103. On the social location of the Pastorals, see also David C. Verner, *The Household of God: The Social World of the Pastoral Epistles,* SBLDS 71 (Chico, CA: Scholars, 1983).

1:1-2
Introduction

1:1. Letters customarily began with the name of the author. Many gods were described as "*saviors" in antiquity, but the *Old Testament and Jewish literature reserved this title for the God of Israel (cf. Phil 3:20; Is 43:11; Hos 13:4).

1:2. The next elements of a letter were the name(s) of the addressee(s) and the greeting (cf., e.g., Rom 1:7). Educated persons in antiquity often addressed a letter to a specific person, but intended for that letter to be published or to be an open letter to a group. Paul publicly supports Timothy's authority through this letter. (*Patrons often sent letters of recommendation on behalf of their *clients, or political dependents. Timothy's letter, however, could be publicly read in the house-church gatherings, reinforcing Timothy's apostolic authorization.) Some suggest that "true child" (NASB) echoes legal terminology for a legitimate heir.

1:3-11
Scripture Twisters

1:3. Timothy stayed in Ephesus while Paul traveled northward through Troas (2 Tim 4:13) and across into Macedonia. Paul here reminds the readers (1 Tim 1:2) that he authorized Timothy to act on his authority.

1:4. *Plato and most other philosophers rejected or reinterpreted the "myths" that they believed misrepresented the gods, although some believed that myths could be used to illustrate truths. *Philo, *Josephus and other Jews argued that their Scriptures contained no myths; but extrabiblical elaborations of biblical accounts were common, and Paul probably has them in view here (cf. Tit 1:14). "Genealogies" might refer to expansions of biblical genealogies, as in some Jewish works from this period, or perhaps false postbiblical attributions of ancestry. The phrase "myths and genealogies" had been used pejoratively from Plato on.

1:5. Greek literature also praises a "good conscience"; the *Old Testament extols a "pure heart" (Ps 24:4; 73:1, 13).

1:6. Both Judaism and most philosophers condemned empty, worthless talk, including arguments about words and the verbal skills of wordy *rhetoricians unconcerned with truth. Some groups of philosophers from Protagoras on emphasized verbal quibbling more than seeking truth, regarding the latter as inaccessible; but most philosophers criticized these agnostics. Many professional speakers also valued important speeches above subtle disputes over trivialities, although training in public speaking included extemporaneous speeches on randomly assigned topics.

1:7. Although segments of Palestinian Judaism had or were developing standards for accredited teachers of the *law, there was nothing legally to keep anyone from claiming to be a teacher of the Bible, any more than there is in many Christian circles today. Jesus often had conflicts even with those who were publicly recognized as teachers of the law.

1:8-9. Philosophers believed that wise people did not need laws, because their wise behavior itself modeled the moral truth on which laws were based. For Paul, this ideal was true for Christians; laws were necessary only to restrain those who were inclined to sin. Like many ancient authors, he includes a "vice list" to catalog the sorts of sins he means (1:9-10). Most of these were obvious as sins to ancient readers: for instance, killers of fathers and mothers were considered the most evil of sinners and executed in horrible ways under Roman law (sewn into a bag with animals, including a snake, and drowned).

1:10. On "homosexuals" (NASB; or "men who sleep with men" see comment on 1 Corinthians 6:9-10. "Kidnappers" (NASB, GNT) were "slave traders" (NIV, NRSV; this was the purpose for which people were kidnapped—cf. Ex 21:16; Deut 24:7); Paul's remark directly assaults the vicious slave trade of his day. Many kidnappers sought children to make them male and female slave prostitutes, though infants were available without cost, abandoned on trash heaps by (sometimes destitute) parents. Perjury was a special form of lying that involved the violation of a divine oath, thus showing disrespect to the deity. *Stoics and others described reasonable teaching as "sound" (healthy, wholesome).

1:11. Only the "faithful" (1:12) were to be entrusted with money, given tasks as messengers and so forth.

1:12-17
A Blasphemer's Conversion

Having condemned the false teachers (1:4-11), Paul nevertheless does not want to portray them as beyond hope; although blasphemers were to be excluded from *church fellowship (1:20), Paul himself had been a blasphemer yet was subsequently converted.

1:12. Paul's letters to churches usually open with a thanksgiving for his readers (so also 2 Tim 1:3); these were common in ancient letters. Paul similarly praises God here (concluding in 1:17). This is not, however, Paul's regular epistolary thanksgiving, which would have normally occurred after the introduction (1:1-2). Some suggest that he sticks mainly to official business because this is an official letter meant to authorize Timothy.

1:13-15. Jewish texts condemn blasphemers to hell (*Gehenna). Although ignorance did not absolve one of guilt in Judaism, it did decrease one's guilt; in Jewish texts, this was even true of the *Gentiles, who had some, but only very limited, knowledge about God.

1:16. Both Jewish and Greco-Roman teachers used examples to make their points. Sometimes they used themselves as examples, and occasionally (though rarely) described negative aspects of their past (e.g., Rabbi *Akiba on his conversion to love of the *law; many philosophers despised their past before their conversion to philosophy).

1:17. In praising a deity, Greeks and sometimes Jews would list his or her titles and attributes. Jewish texts unanimously affirm everything Paul says about God in this verse; that God was the "only" God was the view of Judaism. Most people believed in all gods equally, so the Jewish and Christian view could sound intolerant to outsiders. "Amen" concluded prayers and praises in the *synagogues, indicating the assent of the other hearers. In context (1:16), this description might refer to Jesus, but this is not clear.

1:18-20
Removing a Blasphemer

1:18. Philosophers and moralists used battle imagery to describe their labor on behalf of truth. Claims of prophecies were a rare (and in some circles marginalized) phenomenon in Judaism but were apparently common in early Christianity; prophecies to Timothy at his ordination (4:14) would thus be very meaningful.

1:19. Philosophers also used the image of shipwrecks; Christians needed to be good spiritual sailors as well as good soldiers (1:18).

1:20. Early Jewish sources (including the *Dead Sea Scrolls) attest a range of levels of excommunication, including full exclusion from the community (for extended periods or even permanently; here, apparently until *repentance). Some contend that official synagogue excommunication included a curse or execration against the person being banned from the community; it could be viewed as equivalent to capital punishment under the *Old Testament *law. By handing these blasphemers over to *Satan, Paul is simply acknowledging the sphere they had already chosen to enter (5:15). Paul's purpose here is restorative, however, "so that they might be taught not to blaspheme" (NASB), as God had taught Paul (1:13). See comment on 1 Corinthians 5:5. On Hymenaeus's views (Hymenaeus is not a common name, so it is no doubt the same one), see comment on 2 Timothy 2:17-18.

2:1-7
Public Prayers for All

2:1-4. The Romans permitted subject peoples to worship their own gods, but they had to show their loyalty to Rome by also worshiping the goddess Roma and the spirit of the emperor. Because Jewish people worshiped one God to the exclusion of all others, Rome allowed them to pray and sacrifice *for* the emperor's health without praying and sacrificing *to* him. Prayers were offered for him regularly in the *synagogues, showing the loyalty of these Jewish institutions to the Roman state. When the *Zealots decided to throw off the Roman yoke "for God," however, they abolished the sacrifices in the temple. This act in A.D. 66 constituted a virtual declaration of war against Rome, several years after Paul wrote this letter. Christian public prayers for the emperor and provincial and local officials showed Christians as good citizens of the society in which they lived (Jer 29:7). Paul's motive is more than keeping peace (1 Tim 2:2); it is also to proclaim the *gospel (2:3-4). A "ransom"

could be a price for others' freedom (Ex 30:12; Num 3:12; Mk 10:45).

2:5-7. Both Christ's mission and Paul's mission testified to God's purpose, his wish to save all (2:4). In Judaism, wisdom, the *law or, in a lesser sense, Moses was thought to have mediated divine revelation, but it was ultimately effective only for Israel, not for the *Gentiles. Most Gentiles believed in many intermediaries for the gods, just as they believed in many gods.

2:8-15
Proper Demeanor for Public Worship

The passage addresses women (2:9-15) in considerably more detail than men (2:8) here, perhaps because women are erring more severely in this congregation. Their culturally inappropriate behavior can bring reproach against the gospel (something Christians could ill afford, 5:14).

2:8. Apparently men were bringing their dissensions (1:6) into public worship. Hands were normally lifted or outstretched for both praise and supplication in the *Old Testament, Judaism, the ancient Near East and the Greco-Roman world. *Diaspora Jews usually washed their hands before prayer, so "pure [or holy] hands" became a natural image for genuine worship (cf. also Ps 24:4).

2:9. Whereas many men in the Christian community were apparently quarreling (2:8), many women appear to have been violating a different matter of propriety in public prayer: seeking to attract attention by their appearance. Most Jewish teachers allowed wives to adorn themselves for their husbands, but both Jewish and Greco-Roman moralists ridiculed women who decked themselves out to turn other men's eyes. This was a common theme in ancient moralist literature: Jewish writings warn especially of the sexual temptation involved in such adornments; Greco-Roman writers also condemn wealthy women who show off their costly array. Hair was sometimes braided with gold, which Paul might have in view here (among the wealthy); men were especially attracted by women's decorated hair. Like most other writers who condemned such gaudiness, Paul should be understood as attacking excess, not as ruling against all adornment.

2:10. Greco-Roman moralists often stressed that it was inward adornment rather than outward adornment that would please a good husband; Paul concurs. See also 1 Peter 3:3-4.

2:11. The proper way for any novice to learn was submissively and "quietly" (a closely related Greek term appears in 2:2 for all believers). Although exceptions were made for elite women (for example, *Philo praised the empress as "almost male" in her intellectual capacity; *Embassy to Gaius* 320), and some intellectuals praised the ability of women (or particular women) to learn, most men considered intellectual activity a predominantly male exercise. Women were less likely to be literate than men (sometimes estimated at ten percent as often as men of the same social class), were trained in philosophy far less often than men, were trained in *rhetoric almost never, and, more importantly here, in Judaism were far less likely to be educated in the *law. Boys were raised to recite the Torah; girls were not, although they could listen in synagogues and remember what they heard at home. Given the bias against instructing women in the law, it is Paul's advocacy of their learning the law, not his recognition that they started as novices and so had to learn quietly, that was more countercultural. (Women did occasionally attend rabbinic lectures, but the vast majority of *rabbis would never accept them as *disciples, and *Hellenistically oriented Jews like *Josephus and Philo were even more biased against them than the rabbis were. There is evidence for a few women filling higher roles in some Diaspora synagogues, in local cultures where women had higher social positions, but the same evidence shows that even there prominent women in synagogues were the rare exception rather than the rule.)

2:12. Although some women had opportunities to learn, women became teachers only extremely rarely; in all of antiquity, only a tiny proportion of respected sages (such as Aspasia, Sosipatra and Hypatia) were women who could also teach men. (In Jewish circles, Beruriah, second-century wife of Rabbi Meir, was instructed in the law, but she was a rare exception.) Many accused those they believed

to be false teachers of targeting women because they were more vulnerable. Given women's usual lack of training in the Scriptures (see comment on 2:11), the error spreading in the Ephesian *churches through ignorant teachers (1:4-7), and the false teachers' exploitation of these women's lack of knowledge to spread their errors (5:13; 2 Tim 3:6), the prohibition here fits the situation (the prohibition in fact appears in the only set of letters that specifically reveal that false teachers were targeting women; though cf. comment below). His short-range solution is that these women should not teach; his long-range solution is "let them learn" (2:11). Many believe that the situation might be different after the women had been instructed (2:11; cf. Rom 16:1-4, 7; Phil 4:2-3).

2:13. The argument from the order of creation is the same argument Paul used to support women wearing head coverings (1 Cor 11:7-12). Some writers take the argument here as universal, for all circumstances, even though most OT scholars do not view that as the most natural reading of the Genesis text to which he alludes (Gen 2:18 in Hebrew suggests a complementary partner, and Genesis repeatedly shows that God sometimes blessed the younger over the older). Other writers take Paul's statement here only as an ad hoc comparison (see comment on 2:14), as most writers take his same argument for head coverings in 1 Corinthians 11. Paul sometimes applies Scripture in an ad hoc manner (see, e.g., comment on Gal 3:16), although he more often employs it universally (see, e.g., Rom 5:12-21).

2:14. Paul refers to the account of Eve's fall as it is told in Genesis 3, although some later Jewish stories increased Eve's guilt or deception considerably beyond that account (perhaps sometimes thinking of the Greek story of Pandora). That he compares the unlearned women of the Ephesian *church with Eve is clear; his earlier letters also compare the whole church of Corinth, both men and women, with Eve (2 Cor 11:3), the Corinthian church with Israel (1 Cor 10:1-22) and his opponents in Galatia with Ishmael (Gal 4:24-25). That he would apply this illustration to all women in all times, as some have thought, is more debated. Some argue that if Paul compared *all* women with Eve, he would be implying that all women are more easily deceived than men (at least if he were excluding all women from teaching; indeed, the local false teachers themselves were men—1 Tim 1:20; 2 Tim 2:17). (Empirically, assuming female deceivability is problematic; from years of teaching biblical interpretation to hundreds of students of both genders, even the author of this commentary can testify that, at least today, gender does not affect performance scores in biblical interpretation courses.) Similarly, his illustration in 2 Corinthians 11:3, comparing Eve's deception to the entire church, might lose its force if Eve necessarily represents all women here. Scholars thus continue to debate the point of Paul's analogy.

2:15. Some scholars argue that "saved" is meant theologically: Christian women will have *eternal life if they live godly lives, which includes following cultural propriety for the sake of the gospel's witness. Alternatively, Paul could mean "saved" or "delivered" in a different sense—the sense it was usually given when related to childbearing. Women normally prayed to particular gods to "save" them, which meant bringing them safely through childbirth. (The curse on Eve came to be associated with death in childbirth in some parts of Judaism, so Paul might be qualifying his comparison in 2:13-14. In this case, he would be noting that Christian women are not daughters of Eve in every sense, thus implying that his illustration in 2:13-14 should not be pressed beyond the service for which he employed it.)

3:1-7
Qualifications for Overseers

Lists of qualifications for offices appear in both Jewish and *Gentile sources; lists of virtues appropriate to such offices are even more common. These lists were applied both to political or military offices and religious ones (e.g., judges in Jewish sources). Exceptions were not stated in general lists of qualifications but might be made for particular qualifications in extenuating circumstances. The term translated "overseer" (NIV, NASB) or "bishop" (KJV, NRSV) was elsewhere in use in the ancient world for leaders, and Paul uses it synonymously with "elders" (Tit 1:5, 7), a leadership title used in *synagogues and with a long history in Israel.

3:1. Many moralists urged any worthy men to become statesmen. Certain officials in the Greek world, in both cities and associations, were naturally called "overseers." The *Dead Sea Scrolls also use the Hebrew equivalent of the term for an office of leadership at *Qumran; here it might be equivalent to the synagogue leaders responsible for the synagogue service, although probably in less formal house *churches. This office is identified with that of elders in the *Pastoral Epistles (Tit 1:5, 7), a situation that had changed by the early second century (Ignatius, *Letter to the Trallians* 3) but that still obtained in Paul's day (Phil 1:1; cf. Acts 20:17, 28).

3:2-3. The office of overseer was open to all, but some qualifications needed to be observed, especially in view of the errors circulating in Ephesus. The qualification of being "above reproach" frames the other qualifications (3:2, 7); this was an ancient way of emphasizing that the qualifications focused on this issue. Political leaders were also expected to be "above reproach," but a persecuted minority sect needed to protect itself against public slander even more than politicians did.

Polygamy was not practiced in the Roman world outside Palestine (hence is not likely the point here), though illegal bigamy and certainly adultery were. "Husband of one wife" no doubt means a faithful husband and probably presupposes marriage. If it expresses a preference for marriage, it might be helpful in standing against the false teachers who opposed marriage (4:3), although this preference might not apply to all situations (cf. comment on 1 Cor 7:8.) "Husband of one wife" (NASB) refers to one's current marital status and behavior (cf. NIV: "faithful to his wife"; see fuller comment on 5:9); validly divorced people who remarried were considered married to one spouse, the second one, not to two spouses.

"Hospitality" included taking in trustworthy travelers as guests. Welcoming strangers and visitors was a universal virtue, but because inns in antiquity usually functioned also as brothels, Jewish people in the *Diaspora were especially willing to take in fellow Jewish travelers, as long as the travelers bore letters of recommendation certifying their trustworthiness. Ideally, eating together at table was supposed to form a permanent bond of friendship.

3:4-5. Politicians were often evaluated by how well their children obeyed them; it had long been accepted that the family was a microcosm of society and that a leader first needed to demonstrate his leadership skills in the home. Men in Paul's day exercised a great deal of authority over their wives and children, especially over children still living in the home. That children's behavior reflected on their parents was a commonplace of ancient wisdom (for society's view, see also the public shame reflected in Lev 21:9; Prov 19:13; 27:11; but contrast Ezek 18:9-20 for God's view when normal means of discipline failed). This factor may have been especially important for leaders of churches meeting in their own homes; but again, it assumes a premise of generally patriarchal ancient culture (where properly disciplined children usually obeyed) not directly, completely applicable to all societies.

3:6-7. Ancient leadership ideology required leaders to be tested in lower offices, to demonstrate their skills before being promoted; the church in Ephesus had now existed for over a decade, hence the Ephesians could insist on more seasoned leaders than some other churches could (the requirement is missing in Titus). The ever-present danger of false accusation required leaders to do everything in their power to avoid scandal; a solid reputation was helpful for church leaders, as it was for public officials.

3:8-13
Qualifications for Deacons

Lists of qualifications were common in antiquity; see the introduction to 3:1-7.

3:8. *New Testament texts use the term translated "deacon" in several ways. It usually means a servant-minister, generally a minister of the word, like Paul. But sometimes it is an office distinguished from "overseers" (Phil 1:1), possibly similar to the office of the *chazan* in the synagogue. This synagogue attendant was responsible for the synagogue building, so an analogous role could have been filled by the owner of the home in which a house synagogue or church met. Unlike elders (3:2), this sort of "deacon" may have fulfilled an administrative function without as much public teaching.

3:9. The qualification that the "deacon" keep "hold of the deep truths of the faith" (NIV; see, literally, "mystery") is all the more critical given the prevalence of severe error in the Ephesian church (1:3-7).

3:10. A common feature of ancient political life was that leaders (or new members of groups) were often tested in lower offices before being promoted to higher ones; see comment on 3:6-7. On being "beyond reproach" (NASB), see comment on 3:2.

3:11. Scholars debate whether "women" here refers to deaconesses or to male deacons' wives, although even the Roman government was aware of Christian deaconesses (apparently female deacons) by A.D. 112 (Pliny, *Epistles* 10.96.8, as usually understood). Thus Paul either requires upright behavior on the part of church officials' wives (in ancient society, men were often ridiculed for their wives' behavior) or explains some different requirements for women deacons. Gossip was especially associated with and probably (given social expectations and association of wives with neighborhoods) more often practiced by women than by men in the ancient world (cf. 5:13).

3:12-13. On "husband of one wife" see comment on 3:2-3; on "managers of their children" (NASB), see comment on 3:4-5.

3:14-16
Purpose of Church Administration

3:14. Letters sometimes announced one's coming and often communicated a fond desire to see the recipient in person.

3:15. The church, which met in homes, was modeled on the household, just as pagan political theorists compared the household to society in general (3:4-5). Paul's prior admonitions to Timothy, especially in 3:1-13, thus serve a function analogous to the household codes of many ancient writers: providing a specific framework of wisdom for administrating the family unit and society. "Pillars" were used to uphold structures, and support for the truth was needed given its challenge by false teachers (1:3-7). (A prominent and important member of a community was often called a "pillar," so the image here may emphasize the church's strength and indispensability.)

3:16. Here Paul gives the standard of faith his readers were to uphold in the form of a creed or hymn (which Timothy probably already knows). If "taken up in glory" refers to Jesus' return (cf. Dan 7:13-14) rather than to his ascension, then the lines are in chronological order; but not all scholars think this proposal likely (cf. the same term in Mk 16:19; Acts 1:2, 11, 22). "Justified" or "vindicated" in the *Spirit refers to the *resurrection, God's acquittal after the human judicial condemnation of the cross.

4:1-5
Errors of the False Teachers

4:1. Ancient Judaism associated the *Spirit especially with *prophecy (speaking under divine inspiration), and Paul here either essentially prophesies or reports an earlier prophecy. ("The Spirit says" is equivalent to the *Old Testament formula "Thus says the Lord.") As a prophet himself, Paul refutes false or errant prophets (cf. 1 Cor 14:37).

Some Jewish groups (including the *Qumran community) predicted widespread apostasy in the end time, influenced by evil spirits. "Later times" probably refers to the "last days," which by the Old Testament definition were normally understood as inaugurated by Israel's *repentance and deliverance (e.g., Is 2:1; but cf. Dan 2:28; 10:14); in the *New Testament these days have begun (e.g., Acts 2:17) because the *Messiah has already come.

4:2. The "branding iron" was especially used on livestock (but apparently at least theoretically could be used also to identify some criminals); the "searing" may thus mean that the consciences of these apostates have become the property of evil spirits.

4:3. *Asceticism was on the rise in Greco-Roman paganism, and although most teachers (both Jewish and *Gentile) advocated marriage, the value of celibacy was becoming more popular (especially among Gentiles, but some *Essenes also seem to have practiced it). "Abstaining from foods" probably refers to Jewish food laws (see comment on Rom 14:1-4).

4:4-5. Jewish people always praised God before their meal; the normal blessing included praise for the God who "created" the fruit of the vine. Another blessing, possibly standardized in the early second century, was used after meals and included the statement

"God is good and does good." This Jewish custom was an appropriate way to show gratitude to God for his provisions. The food was in a sense sanctified by the word of God (Gen 1:30-31) as well as by such prayer; there was thus no need to abstain from it. Faith rather than something intrinsic to the food made the latter pure (Tit 1:15; cf. Mk 7:19; Rom 14:14).

4:6-16
The Importance of Sound Teaching

4:6-11. Paul alludes to the sort of physical training undertaken especially by athletes and others in the Greek *gymnasia,* where men stripped naked for exercises (v. 7). This image would have been familiar to his Greek readers, because the gymnasium was the center of civic life in Hellenized towns. The image of physical training was extremely common in the illustrations of Greco-Roman moralists and philosophers. Like them, Paul speaks of moral, intellectual and spiritual discipline rather than physical training, although he apparently does accept the physical value of exercise (and undoubtedly experienced plenty of his own during his travels). Jewish teachers especially praised study of the *law, which was profitable "both in this world and in the world to come." Paul emphasizes the same point about spiritual discipline (v. 8).

Men sometimes ridiculed older women (e.g., Menander, *Dyskolos* 580-83), sometimes as idle (cf. Pliny, *Epistles* 7.24.5) or chatterers (Philostratus, *Lives of the Sophists* 1.25.541). Philosophers and others commonly demeaned the tales of old women as fit only for children, and they mocked irrational views as those suited only to old women (cf. *Seneca, *Epistle to Lucilius* 94.2; Philostratus, *Life of Apollonius* 5.14; **Joseph and Asenath* 4:10). (For example, in *Cicero, *On the Nature of the Gods* 1.20.55, an *Epicurean mocks a *Stoic's view of fate as a belief fit only for ignorant old women.) This perspective also presupposes the illiteracy of most older women in antiquity (even those who had learned to read in youth would usually have had little subsequent practice at it). Paul simply uses the current figure of speech (v. 7; but cf. 5:2).

4:12. "Elders" were highly respected in Greek *gymnasia* and exercised a ruling function in *synagogues and *churches, as they had in communities in the *Old Testament. Because Timothy joined Paul before A.D. 50 (Acts 16:1-3; men entered adulthood around puberty, so Timothy may have been in his midteens) and (on the letter's Pauline dating) Paul is writing in the early sixties, Timothy is at least in his late twenties and could well be in his early or mid-thirties; this term for "youth" (KJV) could apply up to the age of forty, although it usually applied especially to someone under twenty-nine. (It may involve youth comparative to elders here.) Despite the valuing of youthful vigor, many regarded youth (albeit especially adolescence) as less responsible, more violent, sexually uncontrolled and impetuous. Those who were not elders were often considered inappropriate for leadership positions (cf. 1 Sam 17:33), and many offices became available only at age thirty; even in Jewish tradition many others became available only at age forty. Some stories about the appointment of young men were made up later to extol prodigies (e.g., postbiblical stories about Daniel, Solomon or several *rabbis), but others were the boasts of young achievers (such as Cicero); Timothy's appointment was thus a rare privilege in his culture. Even though Timothy is younger than the elders he is advising, he is to take the role of the mature leader and act as an example for the community. Teachers normally asked *disciples to imitate them, and in so doing took the role of father figures.

4:13. As in the synagogue (both in Palestine and in the *Diaspora), public reading of Scripture was central to the service (e.g., *Josephus, *Against Apion* 2.175; *Jewish Antiquities* 16.43; *Corpus Inscriptionum Iudaicarum* 2:332-35, §1404); although the practice of specified readings may have been only beginning to develop, the reading from the Law was probably generally accompanied by one from the Prophets. The reading was then expounded (exhortation and teaching) by means of a homily on the text that had been read. (For reading and then exposition in the synagogues, see *Philo, *That Every Good Person Is Free* 81-82, esp. 82; *Special Laws* 2.62; *Life of Moses* 2.215-16; *Dreams* 2.127; cf. already Neh 8:8. This Jewish practice would be intelligible in a Greco-Roman context; in Greco-Roman

schools, children translated texts from classical Greek into vernacular Greek, then expounded them in response to questions and answers.) By the mid-second century apostolic writings (later officially recognized as the *New Testament) were being read alongside the Old Testament in church services. "Until I come" authorizes Timothy: his exposition of Scripture would function as the best available equivalent of Paul's apostolic presence.

4:14. Oracular utterances had long been used to attest the divine rights of kings and other officials, and Paul's mentioning of prophecies about Timothy's gift (probably teaching, 4:13) at his ordination could help quiet the opposition (see comment on 1:18). The approval of the "presbytery" (KJV, NASB) or "body of elders" (NIV) also could silence criticisms about his youth (4:12). (On elders as leaders, see comment on Acts 14:23. The elders here may be those appointed by Paul in Lystra; cf. Acts 14:21-23; 16:2-3.) Mature Jewish teachers ordained other Jewish teachers through laying hands on them; this practice served as official accreditation.

4:15-16. "Progress" (v. 15) was the standard philosophical way to describe a *disciple's advancement in moral philosophy and was naturally applied to advancement in Jewish (Gal 1:14) and Christian (Phil 1:25) truth as well. It is clear that Timothy's attention to his teaching is critical: his teaching would affect the salvation of his hearers (v. 16; cf. 2 Tim 3:15); the prevalence of error (4:1-3) reinforced the importance of this demand.

5:1-2
Honoring Elders

Given the preceding context (4:14), "older man" here may refer specifically to an "elder" (the same Greek word); the use of kinship terms for officers in the *church accords with the description of God's household in terms of a family (3:4-5, 15). In this case, 5:3-16 would refer to female elders, a special office of older widows devoted to prayer, just as 5:17-25 applies to male elders. Interestingly, prominent individuals in *Diaspora *synagogues were often called "fathers" or "mothers" of synagogues. It is also possible that 5:1-2 is a more general statement, of which widows and elders as church leaders represent specialized examples. In either case, Timothy must address those older than he is (4:12).

Respecting elders was a standard feature of ancient wisdom and social custom, just as respecting one's parents was; treating elders as if they were one's parents, and peers as one's brothers or sisters, was also considered praiseworthy behavior.

Developing the admonitions of Proverbs, Judaism heavily emphasized expressing concern for one's neighbor by offering and accepting correction (see both *rabbis and *Dead Sea Scrolls). But it also emphasized the necessity of private as opposed to public rebuke unless all attempts at private settlement failed.

5:3-16
Honoring True Widows

Here Paul may refer to widows in general, but he probably refers to an order of widows who served the church, as in second-century Christianity. (Commentators disagree on this point.)

We should keep in mind that Paul addresses the values of ancient society for the sake of the church's witness (5:7, 14; 6:1), not implying that all societies should share those values (which would, for example, look down on older women who had never married—5:10).

5:3. Honoring elders was important; "honor" here includes financial support (5:4, 16-18). By "widows indeed" (KJV, NASB) or "real widows" Paul means not simply those bereaved of husbands but those both committed to the church's ministry of prayer (5:5) and experiencing the stereotypical *Old Testament plight of widows: destitution (5:4).

5:4. Adult children or other close relatives were expected to care for destitute widows, who had no opportunity to earn wages (and relatively little potential income by other means, e.g., selling produce from their garden) in ancient society. It was believed that one owed this care to one's parents for their support during youth; Paul agrees. Judaism even understood this support as part of the commandment to honor one's parents (see comment on Mk 7:9-13). (Under Roman law, a father could discard a newborn child; the child was not regarded as a person and member of the household until the father agreed to raise and

support the child. This way of thinking probably contributed to children's recognition of responsibility to parents. Early Jews and Christians, however, unanimously opposed abortion, infanticide and throwing out babies, seeing personhood as a gift of God, not of parents.) Caring for aged parents was a matter not only of custom but of law, and was common even in Western society until recent times.

5:5. The Jewish ideal for older widows, who received support from family or distributors of charity but whose only contribution to society was prayer (no small contribution), was that they be women of prayer (cf. Lk 2:37). (This is probably unrelated to the Roman image of Vestal Virgins' prayers supporting Rome, although that image shows the ease with which the idea could have been grasped even in pagan culture.)

5:6. Here Paul probably refers to some sort of sexual immorality, perhaps becoming a mistress or indulging in lust. (Once remarried—5:11—a woman would not be considered a widow.)

5:7. The Greco-Roman world as a whole was happy to find cause for scandals in minority and foreign religions, and libeled especially any sexual irregularities. Being "above reproach" (NASB, NRSV; also in 5:14; see comment on 3:2) is crucial for the spread of the *gospel (6:1). Although conflicting ideals about widows' remarriage existed in antiquity (see comment on 5:9, 14), all would view negatively a Christian's committing immorality or violating a *vow* of celibacy (cf. comment on 5:11-12).

5:8. Even pagans believed in supporting destitute widows who were relatives; it was believed that one owed support to one's aged parents (cf. comment on 5:4).

5:9. The expression "put on the list" was often used of official registrations (e.g., for troops). In some Jewish traditions, "sixty" was the figure for the beginning of old age (see comment on Lk 1:7; age for elders in Mishnah *Avot* 5:21). Some scholars think that the "wife of one man" may allude to the ancient ideal of remaining faithful to one's former husband after his death by not remarrying; but the more popular ideal in this period was remarrying quickly (cf. 1 Tim 5:14). Another use of a related term is more likely: many husbands praised wives who had been "one-man wives," meaning faithful and good wives (so, e.g., NIV: "faithful to her husband"). In view of 3:2, 12 (there was no ancient ideal that *husbands* not remarry) and 5:14, Paul must simply mean "faithful and good wives."

5:10. Ancient writers (especially Aristophanes; see comment on 4:7) sometimes ridiculed older women, though they sometimes respected them (see comment on 5:2). Paul's qualifications here are to ensure that those "on the roll" are above reproach; the popular ideal standards for women of any age included rearing or having reared children (see comment on 5:14). Providing water for washing of feet was a sign of hospitality in antiquity; the actual acts of washing someone's feet indicated the humble posture of a servant or a subordinate (cf. 1 Sam 25:41 and comment on Jn 13:3-8).

5:11-12. Groups expected members to be faithful to their commitments. For example, *Pharisees became upset with those who reneged on their Pharisaic vows (Tosefta *Demai* 2:9), and the *Essenes were even more angered by those leaving their way of life (1QS 7.22-25 in the Dead Sea Scrolls); the importance that such sects attached to committed membership was reflected in the testing of candidates before their admission into full fellowship. Public departure from a commitment to the order of widows could bring about scandal; the "condemnation" (NASB, NRSV) is that of outsiders, as in 3:6-7.

5:13. Here Paul's language reflects a popular perception of uneducated women's behavior (cf. also 3:11); because of cultural expectations and probably limited education (which Paul seeks to remedy in 2:11), idle gossip commonly characterized women's daily lives, and even moreso stereotypes about them. Jewish and Greco-Roman texts alike condemn gossiping or babbling women, including widows. The *Essenes were so sensitive about their reputation that an Essene who slandered their community would be banished (1QS 7.16-17 in the Dead Sea Scrolls). The language here depicts women spreading false ideas; the false teachers (cf. 1 Tim 1:6-7) may have targeted widows (cf. 2 Tim 3:6) because (1) women were usually less educated and (2) widows were the women who most often owned their own

homes, useful for meeting places for new congregations.

5:14. Since the time of Augustus over half a century before, the rapid remarriage of widows became a Roman social ideal; it was also the ideal maintained by Jewish teachers.

The popular standards for a young woman, stressed in writings of philosophers and moralists, were chastity, modesty, quietness, submission and obedience to her husband, and devotion to domestic duties, including the rearing of young children. In contrast to the ideal wife of Proverbs 31, the ideal wife of Greek society was socially retiring and restricted herself mainly to the domestic sphere, the only place where she had authority. (Ephesus was in Asia Minor, but was originally a Greek *colony there, and Greek culture had pervaded the urban east by this period in any case.) "Keep house" (NASB) is better translated "manage their homes" (NIV); although subordinate to her husband, the Greek wife otherwise "ruled" her home. Although the division was less strict in practice, people generally treated public as the male sphere and private, or domestic space, as more often the female sphere. Paul here upholds some societal values for the sake of the gospel's witness (avoiding "reproach").

5:15. "Turning aside" (KJV, NASB) is used in the Dead Sea Scrolls for apostasy; see comment on 1:20 regarding *Satan.

5:16. Some women were well-to-do enough to become benefactors and *patrons; they had social dependents, which could include blood relatives, slaves, *freedpersons or others willing to be her *clients. By requiring well-endowed Christians to fulfill their responsibilities to family members, Paul hopes to stretch the church budget to help those who really had no other means of support.

5:17-25
Treating Church Elders Respectfully

5:17. "Honor" sometimes included payment, and this is the case here (5:18). "Double pay" (so GNT here) was sometimes given to worthy soldiers and is probably in view here. Because elders who did not have large property holdings would otherwise be at least partly dependent on working children, Paul advocates supporting them well (this support does not imply making them wealthy, of course).

5:18. Paul argues his case both from the *Old Testament (Deut 25:4) and from the sayings of Jesus (cf. Lk 10:7). Citations from authoritative or classical texts were used to prove one's point not only in Jewish but also in other Greco-Roman literature.

5:19. Greek culture also recognized the value of witnesses for legal decisions, but the testimony of two or three was one of the most crucial requirements of Jewish *law (based on Deut 17:6; 19:15). For Paul, it is the other side of being "above reproach" (3:2): accusations must be properly examined and not uncritically accepted.

5:20. Judaism strongly emphasized reproof and correction; public reproof was to be a final resort only if private attempts had failed (see comment on 5:1-2).

5:21. Calling witnesses to an exhortation as Paul does here made it far more authoritative; Paul chooses the ultimate witnesses for such a charge. The angels are "*elect" or "chosen" (NASB) as opposed to fallen angels. The ancient world—especially the Old Testament and Judaism (which did not automatically favor upper classes in disputes, as Roman law did)—stressed that judges must be fair.

5:22. Jewish teachers would "lay their hands" (cf. NASB) on their *disciples to "ordain" (NRSV) them (see comment on 4:14), and that is what Paul has in view here: ordaining an elder who had not first been tested (see comment on 3:10) made one responsible for his subsequent exposure if he turned out to be ungodly. Keeping oneself "pure" (literally) "from sin" was a *Stoic virtue as well as a Jewish one.

5:23. Most people drank wine with their meals (albeit about two parts water to one part wine, and not distilled to a higher than natural degree of fermentation). Timothy has been abstaining (apart from, we may assume, the Lord's Supper), perhaps to avoid the criticism of those influenced by the false teachers (4:3; some *ascetics abstained from wine); Paul tells him to go back to using it. Wine was often helpful in settling stomachs and preventing dysentery (it could be used to disinfect water). Some restorative diets recommended water (e.g., Fronto, *Ad Antoninum Pium* 8), others wine; medicines could be delivered with either.

5:24-25. The sins that were secret or in the heart made evaluation (5:22) difficult, as many ancient writers acknowledged.

6:1-2
Advice to Slaves

In keeping with exhortations dealing with households (3:15), Paul naturally includes advice to slaves (household slaves were considered part of the household). This advice was important because a movement that the Romans thought might incite slave discontent would immediately be labeled subversive and subjected to outright persecution; Paul wants the slaves who are Christian, as well as free Christians, to engage in a culturally relevant and intelligent witness. When Paul says that masters "benefit" from their slaves (v. 2), he employs a term especially used of wealthy benefactors who bestowed gifts on social inferiors. Thus Paul, like the philosopher *Seneca, possibly portrays the slaves as persons free in God's sight who can choose to bestow a gift on their masters by serving them freely.

6:3-10
The Error of Materialism

Those spreading error were using the *gospel to accumulate wealth; Paul says that food and clothing should be enough for a Christian (6:8), who should seek no more than his or her basic needs (cf. Mt 6:25). This greed was one reason that Paul had to prohibit materialistic persons from *church office explicitly (3:3, 8). Some pagan philosophers also used their philosophy for personal gain, and this behavior drew the hostility and criticism of outsiders.

6:3. "Sound" can mean "healthy"; Greek and Roman writers often used medical imagery to describe the spiritual state of people's souls or beliefs, though the figurative use was so common that the metaphor may be a dead one. Perhaps Paul refers here to Jesus' teachings (cf. Mt 6:19-34).

6:4. Pseudointellectuals liked to quibble about detailed nuances of words rather than deal with crucial issues; see comment on 1:6.

6:5. Jewish people often recognized wealth as a sign of God's blessing, and many teachers taught that those who served God would become more prosperous. This teaching was, however, meant as a general principle, as in Proverbs: one who works harder earns more. But these teachers also recognized that wealth could be used for good or evil, and many warned of the dangers of wealth, or even linked piety to poverty. A similar ambiguity is found among Greco-Roman philosophers: many said that wealth was acceptable if put to good use, but others (most obviously the *Cynics) thought that it should be rejected altogether as burdensome. The philosophers did not, however, normally see wealth as a reward for doing good. It is not clear whether Paul's opponents *preach* that godliness is a means of gain or simply *use* religion as a means of gain.

6:6. Moralists sometimes used "gain" figuratively in a contrast to material wealth. Judaism often viewed present wealth as paltry compared with the true wealth of the world to come, which really mattered. One of the most common doctrines of philosophers and those influenced by them was contentment; people should be self-sufficient, recognizing that they need nothing other than what Nature has given them.

6:7. Here Paul cites a moral commonplace, phrased similarly by *Cicero; it is also attested in the *Old Testament (Job 1:21), *Diaspora Jewish literature and other Greco-Roman writers.

6:8. Ancient literature usually recognized "food and clothing" as the basic needs, which even Cynics and the poorest of peasants required (Cynics and most peasants had only one cloak each). On "contentment," see comment on 6:6 and Philippians 4:11.

6:9. Different cultures understand material "wealth" differently. For example, middle-class North Americans understand "rich" much differently from the way Paul's first readers would have; in the widespread poverty of the ancient Mediterranean, most people would have viewed the lifestyle of middle-class North Americans as "rich." Like many writers of his day, Paul addresses those seeking to accumulate wealth (cf. Prov 28:20) rather than those who had already become wealthy through inheritance or industry (6:17).

6:10. Paul cites here a widely used ancient proverb about loving money being the source of various evils (e.g., *Theon, *Progymnasmata* 3.91-92; **Sibylline Oracles* 3.235). The idea was even more common than the saying, but the

saying itself circulated among philosophers and those who respected them.

6:11-16
Fleeing the Evil Lifestyle

In contrast to the greedy preachers (6:3-10), Timothy is to seek righteousness.

6:11. Moralists often exhorted readers to "flee" from vices. Ancient Hittites used the expression "man of God" to describe religious figures, and the *Old Testament used it for men commissioned by God to function as his spokespersons. Its fairly rare occurrences in subsequent Jewish literature (e.g., *Life of Adam and Eve* 41:2; 51:2; *2 Enoch* 7:4; cf. **Letter of Aristeas* 140) are probably dependent on the Old Testament usage, as is Paul's use here. (Some later Jewish sources, such as the *Targum, sometimes change "man of God" to "prophet.")

6:12. Greco-Roman moralists often described moral struggles in terms of warfare, as did Jewish texts influenced by them (e.g., *4 Maccabees, where it refers to martyrdom). The image in the Greek here is not that of a war, however, but another image the moralists equally exploited in a figurative manner: the wrestling match or athletic contest.

6:13. A charge with gods as witnesses (as also in 5:21) was considered especially binding.

6:14. "Without stain or reproach" (NASB) was a natural image for virtual perfection, for example in the requirements for pure sacrifices to God as unblemished (e.g., Lev 1:3, 10; 3:1, 6; 4:3, 23, 32) or reports of "undamaged" merchandise and so forth. On "without reproach," see comment on 3:2. "Appearing" was sometimes used in Greek religion for manifestations of gods, but it would be a natural Jewish description in Greek for the revelation of God at the end time.

6:15. Jewish literature repeatedly described God as king. Especially in the East, rulers who claimed to be supreme kings, such as the Babylonian or the Parthian king, called themselves "king of kings and lord of lords." Greek writers like Dio Chrysostom occasionally applied the title to Zeus; Judaism quite often applied it to God, and Christians applied it to Jesus (cf. Rev 19:16).

6:16. "The Immortal" was a common title for God in *Hellenistic Judaism (borrowed from a Greek term for their own gods, which Jews and Christians recognized as an inappropriate epithet for them; thus Paul adds "who alone"). Jewish texts often mentioned the glory of light around God's throne; kings' great authority made them unapproachable for common people. The Old Testament declared that no one could see God's full glory and live (Ex 33:20), and later Judaism amplified this recognition (although some Jewish mystics, expanding the visions of the throne in Ezek 1 and Is 6, claimed to have penetrated the splendor around the throne and seen something of God).

6:17-19
Instructions for Those Who Are Rich

In 6:3-10 Paul condemned those who were seeking wealth, but in 6:17-19 he addresses those who are already wealthy. For Paul, wealth and property are not sinful in themselves, provided that one is not seeking them. Wealth can be used for good or for evil, for selfish or for beneficent causes; Paul says that Christians must use it for good.

6:17-18. The very wealthy usually derived their income from landowning; they rented out the land to tenant farmers or residents, or derived profits from crops grown on the land. A socially inferior but nonetheless wealthy class of merchants also arose, especially of ship owners. Wealth could be gotten by a variety of means, not all of them immoral.

The issue was not whether one had wealth but whether one used it for oneself or for others. This was the usual view in Judaism, which stressed charity, and a view held by many philosophers. Paul does not reject the world, as did the *Cynics, in some ways the *Essenes, or (in the most extreme sense) later *Gnostics; with Judaism, he affirms that creation itself is good (4:4-5). But he also recognizes that material wealth is transitory. Still more important, people matter more than possessions, and in a world of unending human need, possessions were ultimately worthless compared with more important things one could do with one's resources.

6:19. Jewish texts sometimes spoke of storing up treasures in heaven; see comment on Matthew 6:20-21.

6:20-21
Final Exhortation

"Entrusted" is the language of keeping a deposit; those with whom money was deposited were under sacred obligation to keep it secure or increase it, and this principle applied also to teaching (to which the image was extended by other ancient writers as well). Some scholars have seen the "false knowledge" here as a reference to *Gnosticism (which could indicate a date for the *Pastoral Epistles later than Paul), but this interpretation is unnecessary; many philosophers made claims to "knowledge" which other philosophers considered false.

2 Timothy

Introduction

Authorship, Commentaries. See the introduction to 1 Timothy. Of the three *Pastoral Epistles (whose authorship is often disputed), 2 Timothy is the most difficult to dispute, because of the abundance of personal notes. *Pseudepigraphic letters could also contain personal notes (e.g., Diogenes's letter to Rhesus), but they rarely had many, whereas 2 Timothy is full of them. Pseudepigraphers had little reason to include these details. Some scholars believe that a Pauline *disciple wove together Paul's material in this letter, but often in the disciple's words.

Situation. For the general situation of persecution in Rome, see the introduction to 1 Peter. Assuming Pauline authorship, Paul writes 2 Timothy while imprisoned in Rome, awaiting probable execution; he wants Timothy to join him before it is too late (4:21). Paul was probably released after his imprisonment in Acts 28 (see comment on Acts 28:30) and undertook the missions presupposed in 2 Timothy; then he was rearrested, this time during Nero's massive repression of Christians. He was most likely beheaded under Nero in A.D. 64. Second Timothy has in view this second imprisonment.

Paul's opponents have spread in the province of Asia, and the situation has become much worse since Paul wrote 1 Timothy (2 Tim 1:15). Paul could be discouraged; like Jeremiah in the *Old Testament, his life is to end while God's people are turned away from him, and he will not live to see the fruit of his ministry. His consolation, however, is that he has been faithful to God (4:7-8), and he exhorts Timothy to follow in his paths no matter what the cost. (That the letter was preserved almost certainly indicates that Timothy did persevere.) The letter is dominated by the themes of persecution from outside the *church and false teaching within, and Paul's final exhortation to a young minister is to focus on the Scriptures and the sound teaching to be found in them.

Genre. In many ways, Paul's final letter resembles the letters of moral exhortation written by philosophers to their disciples. But as a letter sent before his death, it has also been compared with Jewish tracts called "testaments," in which a dying leader imparted his final wisdom to his sons or followers, wisdom also of value to subsequent readers. Although most testaments were pseudepigraphic and Paul may have written this letter only for Timothy, the similar situation envisioned could give 2 Timothy the force of a testament: Paul's ultimate wisdom for young ministers.

1:1-7
Introduction and Thanksgiving

1:1-2. Paul modifies the normal opening of letters (author, to addressees, greetings—a word related to "*grace") in his characteristically Christian way. Both *rabbis and philosophers could call their *disciples "sons."

1:3. Ancient letters frequently included thanksgivings to God or gods on behalf of the addressee, who was often praised in the thanksgiving. "Unceasingly" or "constantly" probably means in Paul's regular times of prayer. Many Judeans prayed during the morning and afternoon offerings in the temple; they also said special blessings on rising in the morning and going to bed at night. Palestinian Jews reckoned days from sundown to sundown, so "night and day" is not an unnatural sequence. (One should not read too much into Paul's sequence, of course; the same sequence occurs not only in Jewish texts like Judith and **4 Ezra* but also in strictly Latin texts like Horace, *Quintilian and *Cicero. In contrast, *Josephus and usually the *Septuagint, as well as the Roman writer Martial, could say "day and night," and the *New Testament references are not consistent.)

1:4. Expressions of longing were common in ancient letters of friendship, signifying the deepest intimacy. (This is not, as one commentator thought, a poor imitation of Rom 1:11 or other passages!) In the East, tears were an appropriate expression of sadness for troubled or long partings.

1:5. Even though fathers were responsible for their sons' education, Judaism and Greco-Roman aristocrats wanted mothers to be knowledgeable so they could impart knowledge to their young children. (This is true even though Judaism did not provide women advanced education in the *law, and even though Greco-Roman society generally reserved advanced, i.e., *rhetorical and philosophical, training for men.) Until the age of seven a Roman boy's mother was his main formative influence. For those with access to it, Jewish Scripture education ideally began by the age of five or six, although this education always emphasized memorization and recitation more than reading skills.

The "faith" of Timothy's mother and grandmother was Jewish (Jewish Christian by the time Paul met them—Acts 16:1). Jewish fathers were primarily responsible for their sons' instruction in the law, but Timothy's father was a *Gentile (Acts 16:1, 3). Those without a living religious father also learned from grandmothers if they were still living (cf. Tobit 1:8).

Most education included corporal discipline, but some ancient education experts stressed instead encouraging the child, making him or her feel successful, provoking competition and making learning enjoyable (Quintilian). Ancient writers differed on whether public instructors or home schooling was better, provided the former held classes small enough to permit private instruction.

1:6. Laying on of hands was used for ordination (see comment on 1 Tim 4:14). The image of "rekindling" (NRSV) a fire is possible in this verse (cf. Jer 20:9), although the word for "kindle" (NASB) had been extended metaphorically so often by this period that it is not clear that its fire nuance would always be in hearers' minds.

1:7. Although *Essene texts and some other early Jewish sources sometimes linked evil behaviors with pervasive evil spirits, in Greek "spirit of" often meant simply "attitude of." The exhortation not to be afraid was one of the most prominent biblical assurances from God (e.g., Gen 26:24; Jer 1:8) and was a customary expression of assurance from others as well (Gen 43:23). Although Timothy may have been "timid," one should not therefore assume that this was his unique problem, as some interpreters have (cf. Acts 18:9; 1 Cor 2:3).

1:8-14
Carry on Paul's Mission

Timothy is to maintain his ground (1:3-7), joining Paul in suffering for the *gospel entrusted to them.

1:8. *Disciples were called to follow in their teachers' steps. Paul's suffering here entails especially his imprisonment and impending execution.

1:9-11. The language of "calling" is especially *Old Testament and Jewish, that of "appearing" and "immortality" especially Greek (though long before already adopted by *Diaspora Jews), and "*Savior" was both. That Paul is equally conversant in both worlds is not

surprising; most Diaspora and many Palestinian Jews generally saw no contradiction between fidelity to the Old Testament and speaking the language of their culture.

1:12-14. The "entrusted deposit" (1:12, 14) was originally a monetary image, although other writers had also applied it to teaching; one was responsible to safeguard or multiply any money given one for safekeeping. Jewish teachers felt that they were passing on a sacred deposit to their disciples, who were expected to pass it on to others in turn (cf. 2:2).

1:15-18
Allies and Opponents in Asia

Paul briefly addresses the opposition that Timothy and he face in Asia, where Timothy ministers.

1:15. "Asia" refers to the Roman province of western Asia Minor, of which Ephesus was the most prominent city (cf. 1 Tim 1:3). In context, "all" excludes at least the household of 1:16-18; in accordance with the flexibility of common language in antiquity, it means "most." Although many Jewish teachers predicted widespread apostasy for the end time or even felt that it characterized their own generation, they lamented it. This is hardly the sort of detail a later pseudepigrapher writing in Paul's name would have made up about the end of his ministry. (Later *hagiographers sometimes described the rejection of their heroes, but the narrative was normally accompanied by a description of the awful judgment that befell the apostates who rejected them.)

1:16. Chains and imprisonment were normally matters of shame, and people were often embarrassed to be associated with those so stigmatized. "Onesimus" (Philem 10) could be a contraction for Onesiphorus, but the person Paul describes here does not sound like a recently freed slave. Because Paul speaks of a whole "household" of believers, the Onesiphorus to whom he refers may have had slaves and other dependents. "Refresh" is the language of hospitality, which included housing travelers; Onesiphorus must have had a large home and housed Paul whenever he came to Ephesus. He is a good example to Timothy of one not "ashamed" (1:8, 12; 2:15).

1:17. Very many people in the first century traveled to Rome; Onesiphorus, as a well-to-do *patron benefactor in the prominent Asian city of Ephesus, would naturally be able to do so. "Finding" Paul would mainly be a matter of finding local Christians who could tell him where to find Paul, whether during his earlier detention (Acts 28:30) or the more severe current one. If the latter is in view, Paul might have gotten his news about Asia (1:15) from Onesiphorus.

1:18. Because Paul greets Onesiphorus's "household" in 4:19, some writers have argued that Onesiphorus is dead and that Paul here prays for his posthumous salvation (although the context makes it clear that Onesiphorus was already a Christian). Judaism often spoke of departed heroes as "of blessed memory," and some later tomb inscriptions eulogized the righteous dead with "May he [or she] be remembered for good." Posthumous acts of *atonement were sometimes offered for the dead, but prayers for the "salvation" of the dead in the strict sense seem to be either minimal or altogether lacking in first-century Judaism. Further, it is not clear that Onesiphorus is dead; Paul looks ahead to the day of judgment for himself as well (1:12; 4:8). Paul could speak of someone's "household," including the individual, while the person was still alive (e.g., 1 Cor 16:15, 17).

2:1-13
Persevere

2:1-2. Pharisaism strongly emphasized the passing on of sacred traditions; second-century *rabbis stressed the passing on of traditions from one generation to the next, noting that the process had begun long before them. This passing on of tradition was also the practice of Greek philosophical schools, although they usually emphasized the views of the founder more than those of immediate predecessors.

2:3-4. Philosophers emphasized the total commitment involved in being a true philosopher. They also compared their task to that of soldiers and athletes fighting a war or running a race. Soldiers were not even allowed to marry during their term of service (although some had unofficial concubines while they were stationed somewhere) and were to be strictly devoted to their service for over twenty years; probably over half usually survived to retire.

2:5. Philosophers often compared their

task to that of athletes, whose intense discipline and preparation were proverbial. Athletes were pledged by oath to ten months of such preparation preceding their participation in the Olympic games. The winner's prize was a garland; see comment on 1 Corinthians 9:24-25.

2:6. As in 2:4 (pleasing the enlister) and 2:5 (receiving the prize), the emphasis here is on both hard work and future reward; one who labored for God would be rewarded in the day of God's judgment. (Some commentators have suggested that in 2:4-6 Paul wants ministers to be supported only by their congregations, as some philosophers were supported by *patrons, and never to work on the side; but this view would be surprising given Paul's explicitly contrary position in 1 Cor 9, where he allows both forms of support.)

2:7. Authors occasionally exhorted readers to "consider" (KJV, NASB) and hence understand (cf. Mt 24:15; Rev 13:18).

2:8. Appealing to examples was one of the main hortatory methods of ancient parenesis (moral exhortation); Paul here appeals to the example of Jesus, who endured much but received eternal glory (cf. 2:10-12).

2:9-10. Paul uses himself as an example. Ancient philosophers and moral writers commonly used examples in moral exhortation (cf. 2:8).

2:11-13. Although God's character is immutable, his dealings with people respond to their response to him (2 Chron 15:2; Ps 18:25-27). The faithfulness of God to his covenant is not suspended by the breach of that covenant by the unfaithful; but those individuals who break his covenant withdraw from the covenant's protection (see comment on Rom 3:3).

2:14-26
Persevering Versus Deceived Vessels

The Ephesian Christians must observe "these things," which are what Paul mentions in 2:3-13 as summarized in 2:11-13. They must persevere, avoiding the false teachings rampant in Ephesus (2:14-23), and when possible correcting those involved in serious error (2:24-26).

2:14. Many professional speakers gave nitpicky attention to irrelevant twists and turns of phrase; some philosophers believed that one could do no better than examine the logic of words; many Jewish teachers, seeking to be faithful to the letter of the *law, did the same (emphasizing even the slightest variations in spelling or possible revocalizations). But others criticized this method (see comment on 1 Tim 1:6).

2:15. To the images of soldier, athlete and farmer (2:4-6), Paul now adds the general one of a worker. Jewish readers would have understood an exhortation to be diligent in representing "the word of truth" rightly as an exhortation to study God's law, where his word was found (cf. Ps 119:43). Although Paul presupposes such investigation of Scripture (3:14-17), his emphasis here is on accurate representation of the *gospel in contrast to the empty words of 2:14 and 16.

2:16. See comment on 2:14.

2:17. The image of spiritual or moral gangrene also occurred to some other authors; gangrene's basic characteristic is that it spreads and poisons the whole body, ultimately killing it if it is not removed. Hymenaeus and probably Philetus had been officially cut off (1 Tim 1:20) but still retained a pervasive influence and probably a significant following. Then, as today, it was easy for almost any speaker to get a hearing, because only a few were skilled enough in the Scriptures to discern truth from error for themselves, rather than being dependent on others' teachings. In antiquity the difficulty was greater in the sense that most people could not read and copies of the Scriptures were scarce and expensive, being copied by hand.

2:18. A future *resurrection of the body did not appeal to Greek thought, although the proleptic spiritual resurrection that believers experienced in *Christ was far more amenable to Greek tastes. Some false teachers like Hymenaeus and Philetus had apparently "demythologized" the gospel to make it more palatable to their culture (cf. 1 Cor 15:12; 2 Thess 2:2).

2:19. Although some stones might be removed, a foundation or cornerstone would remain secure. Seals were often used to attest the witnesses of a document or that merchandise had not been tampered with; here the seal is the inscription on a cornerstone, inscribed by the owner or builder.

2:20-21. Paul shifts to another image. When used figuratively in ancient literature,

"vessels" (KJV, NASB) usually meant people (or their bodies as containers of their souls, a meaning that would be irrelevant here). Expensive vessels were reserved for special purposes like banquets; the cheapest vessels were expendable and in Jewish circles would be shattered if rendered impure.

One could interpret "purifies himself from these things" (NASB) in two ways. On the one hand, Paul may distinguish here the righteous from the wicked (as in Rom 9:22-23); but the righteous, like vessels reserved for honor, had to be separated from the vessels for dishonor in the same house (see comment on 2:17-18). On the other hand, one normally purified important vessels from dirt or, in the religious sense, from defilement (such as the false teachers' talk—2:16). (Paul may intend both senses; under some conditions of Jewish law, a pure vessel brought into contact with something impure, including an impure vessel, had to be purified again.)

2:22. Moralists often exhorted readers to "flee" from vices. Certain passions were associated especially with "youth" (a category that could still include Timothy; see comment on 1 Tim 4:12). Many in antiquity indulged and excused young men's passions; by contrast, Paul respects Timothy's ability for self-control.

2:23. On debates over trifling points, see comment on 2:14.

2:24. Jewish teachers and philosophers like the *Stoics also advised patience in instructing others; in contrast, some moralists, like the *Cynics, verbally abused passersby with their "wisdom." Philosophers typically derided the unlearned (cf. 2:23; "ignorant"—NASB, GNT; "stupid"—NIV) in wisdom who were unwilling to seek knowledge.

2:25-26. Judaism emphasized correcting another person humbly and privately before giving public reproof, in the hope of restoring that person to the right way.

3:1-13
The Wickedness of the Last Days

Ancient Jewish sources (except perhaps the most Hellenized, such as Philo) generally characterized the end time as one of turmoil, apostasy, and increased sin and oppression. This view was widespread despite a common expectation that all Israel would return to greater standards of holiness, ushering in the end and the restoration of Israel; others (see the *Dead Sea Scrolls) believed that only the righteous Israelites would remain after these judgments. Like most Jewish writers, Paul does not anticipate a complete renewal of righteousness in the world until the day of God.

3:1. In "last days" (cf. Is 2:2; Mic 4:1; Dan 2:28; 10:14) Paul includes the time in which he is living (cf. 1 Tim 4:1); he no doubt alludes here to the Jewish idea that came to be called the messianic woes, a period of great suffering preceding the end of the age (for end-time suffering, see, e.g., 4Q162 2.1 in the *Dead Sea Scrolls; for sin and evil, e.g., 4Q390 f1.8; **1 Enoch* 91:7; **4 Ezra* 14:16-18; **Sibylline Oracles* 5.74; for apostasy, e.g., *Testaments of Dan* 5:4; *Issachar* 6:1, 6; 7:3; and *Naphtali* 4:1). (The length of this period varied nearly as widely as those Jewish texts that speculated on it; it was not fixed in Jewish tradition.)

3:2. Other ancient moralists also used "vice lists" (cf. Rom 1:28-32). "Lovers of self" (i.e., self-seeking people) were condemned by philosophers such as Musonius Rufus (a *Stoic), *Epictetus and Philo; the moralist *Plutarch warned readers to avoid even the appearance of self-love. (In today's terms this would refer to narcissism, not appropriate self-esteem.) Love and obedience toward parents was one of the most central virtues of antiquity (see comment on Eph 6:1-3). Many deemed ingratitude the greatest offense against benefactors (see comment on Rom 1:21).

3:3-4. *Philo and other philosophers, especially Stoics, repeatedly condemned "love of pleasure"; among philosophers, only the *Epicureans sought pleasure (which they defined as the absence of pain or disturbance), and they were not nearly as influential as their Stoic competitors. *Philo even subsumed a long list of vices under the title "lovers of pleasure" and opposed pleasure to virtue.

3:5. Both Jewish religion and Greek philosophy condemned those who pretended devotion but whose hearts or lives did not match their professed devotion. For Paul, religion without God's power transforming the heart was useless.

3:6. Because women were usually less educated, they were more susceptible than men to false teaching (see comment on 1 Tim 2:11-12).

Women's penchant for switching religions was ridiculed by satirists like *Juvenal and offended conservative Romans. Women reportedly converted to Christianity, Judaism, and the cults of Isis, Serapis and other deities far more readily than men; and in the second century A.D. women were attracted to many heretical movements. Because they were less educated in traditional religion and had less social standing to lose, they more quickly changed religiously, sometimes for good and sometimes for bad. (With regard to Judaism, they also lacked the male disincentive of the pain of male circumcision.)

The false teachers had to get into the homes because they had less access to the women in public (due to married women's partial segregation in Greek society). After they had gained access to a household, their male or female convert within the household could supply financial and other help to them. The women who owned their own homes were most often widows, so widows may have often been targeted (1 Tim 5:13) to gain access to homes where the false teachers could establish or influence congregations. Greek and Roman men often thought of women as easily swayed by passion and emotion; many may have been, because of their lack of education and cultural reinforcement. But Paul here addresses particular, not all, women.

3:7. Philosophers stressed that change came through knowing the truth, and that this knowledge came through learning from them. These women were learning, but they were learning falsehood designed to play on their passions; Paul says that *repentance, not mere learning, frees those thus taken captive (2:25-26).

3:8. Paul here employs Jewish tradition not found in the *Old Testament. In a widespread Jewish tradition (various elements appear in *Pseudo-Philo, the *Dead Sea Scrolls, *rabbis, etc.), Jannes and his brother Jambres were Pharaoh's magicians who opposed Moses in Exodus 7:11. Even pagan accounts (Pliny the Elder and *Apuleius) record them as magicians of Moses' time (presumably dependent on Jewish tradition). Because Paul's opponents appeal to Jewish myths (1 Tim 1:4; 2 Tim 4:4; Tit 1:14), Paul cites such stories to fill in the names for these characters.

3:9. "Progress" (NASB, NRSV) could be a technical term for advancement in learning a particular school of teaching, but here it probably refers simply to advancement of the opponents' movement. Jannes and Jambres ultimately could not match all Moses' signs (in Exodus and in most later Jewish accounts); God would also eventually expose this false movement (1 Tim 5:24).

3:10. *Disciples of philosophers were to follow and emulate their teachers' words and lives. Some other ancient moralists also naturally used "but you" for moral contrasts (cf. also 3:14; 4:5; 1 Tim 6:11; Diogenes, *Epistles* 12; **Jubilees* 22:19). Timothy's knowledge of Paul's sufferings in Antioch, Iconium and Lystra (Acts 13:50–14:19) apparently dates to his family's initial exposure to the Christian message, before he began traveling with Paul (16:1-3).

3:11. See comment on Acts 13–14. Timothy was from this area of Asia Minor (Acts 16:1).

3:12. Many Jewish people expected repression from the pagans, especially in the end time, but Paul virtually *promises* persecution to every Christian truly living in a holy way (cf. Jn 15:20, etc.).

3:13. Paul here shares the view of much of early Judaism that the end time would be characterized by evil, with sinners proceeding from sin to sin unchecked (for the language cf. Jer 9:3). They would ultimately be stopped only by God's final wrath (cf. Gen 6:11-13). The Greek term here rendered "impostors" or "seducers" (KJV) was often used as a pejorative title for harmful or fake magicians (cf. 3:8).

3:14-17
Equipped by the Scriptures

3:14-15. "Sacred writings" (NASB, NRSV) was also used for pagan religious writings (e.g., in the cult of Isis) but is attested in Greek-speaking Jewish sources as a name for the Bible that then existed, what we call the *Old Testament. Although there were different ways of counting the books, it appears from the listing in *Josephus (*Against Apion* 1.8, 39-40) and subsequent listings that these Scriptures correspond to our Old Testament *canon. The most common recensions of the *Septuagint also appear to have included what we usually call the *Apocrypha; although neither the *rabbis nor Josephus seems to have accepted this material as part of the Bible per se, it was

undoubtedly widely read and probably often drawn on.

At least in pious Palestinian Jewish homes with access to sufficient resources, boys were normally taught the "sacred writings" from around the age of five; teaching Scriptures to the children was commanded in the Old Testament (Deut 6:7; cf., e.g., Ps 71:17; 78:5-7). Other peoples often expressed amazement at how well instructed Jewish children were in their ancestral traditions.

3:16-17. The belief in the inspiration of *prophecy and (usually in a somewhat different sense) poetry and music was widespread in Mediterranean antiquity. This belief was naturally applied to books of prophecy, and most of the Old Testament was attributed to prophets. Paul's claim for Scripture's inspiration matches Old Testament designations for the *law and divine prophecies as "God's word." Like Paul, Judaism virtually universally accepted the Old Testament as God's Word.

Listing examples of "every good work" (3:17), Paul employs standard terms from ancient education (3:16); "training" especially characterized Greek education (the *LXX often used the term for discipline). Reproof was especially important in Judaism, where it had to be done privately and gently first. The proper authority, source and content for any of these works was Scripture. On "man of God" (in Timothy's case; more generally, "person of God"), see comment on 1 Timothy 6:11.

4:1-8
Preach the Word

After reminding Timothy of the source of his authority, the Scriptures (in his day, the *Old Testament; see 3:14-17; cf. 1 Tim 4:13), Paul tells him to engage in the ministry for which the Scriptures are profitable (3:16–4:2).

4:1. An oath sworn by a deity or deities was considered especially binding and dangerous to break; in the same way, a charge witnessed by a deity or deities (originally something like putting someone under oath) was sacred and inviolable. A broken oath would be avenged by the god whose name was violated; for Jewish people and Christians, the ultimate judgment was in the coming day of the Lord.

4:2. As virtually always in Paul, "the word" here stands for the message about Jesus, which was the divine message, as the Law and the Prophets were (3:16). Greco-Roman moralists often discussed the "appropriate" time for speech, especially frank speech; Paul says that Timothy should announce his message whether or not people are willing to listen (4:3). Although Paul adapts Greco-Roman philosophical language, the idea is also a pervasive Old Testament one; prophets had to continue speaking regardless of opposition (Ex 6:9-13; Jer 6:11; 20:8-9).

4:3. Demagogues who told people what they wanted to hear were common among politicians, public speakers and philosophers in Greco-Roman society, and false prophets in the Old Testament (prophets who told people what they wanted to hear were usually false; cf. Jer 6:14; 8:11; Ezek 13:10, 16; Mic 3:5; see also comment on Lk 6:26). "Desiring to have one's ears tickled" means desiring to hear only what one enjoys; *Lucian describes in these terms people who like to listen to slander.

4:4-5. The term translated "myths" was usually used derogatorily for false stories; see comment on 1 Timothy 1:4.

4:6. On one's life being poured out as a libation, or drink-offering, see comment on Philippians 2:17. (Some Jewish texts, especially *4 Maccabees, even assign atoning—hence in some sense sacrificial—value to the deaths of martyrs; but it is not clear that this idea is present in this image.)

4:7. Paul's first image is the athletic contest; moralists commonly borrowed this image to describe struggles on behalf of virtue (see comment on 1 Tim 6:12). "Completed the course" refers to a race, again popular athletic imagery (cf. 2 Tim 4:8). "Keeping faith" was a Greek expression for loyalty, similar to a Hebrew expression meaning remaining faithful to the covenant, or in some cases, guarding the true faith (thus "*the* faith" here).

4:8. The image of the "crown" refers to the wreath given to victors in Greek races (4:7).

4:9-18
Old Acquaintances

Some friends had proved faithless, others Paul had needed to send away; but God had proved faithful all along (4:17-18).

4:9. See comment on 4:21. It was important for close friends to come by and visit a dying

person a final time, and this principle applied above all else to a son, even an adopted or surrogate son (1:2). (Sons normally also buried their fathers, but the officials might be reticent to hand Paul's body over to Timothy.) It was important to Paul that especially Timothy be with him before he died; compare, for example, those friends who spent Socrates's final moments with him.

4:10. Most of Judaism contrasted this present evil age (Gal 1:4) with the *age to come, often insisting that those who valued this age too much would have no part in the next one. The persecutions Paul had faced earlier in Thessalonica had probably diminished; in any case it had an established *church. Apparently Demas (probably an abbreviation for Demetrius, but the name that Paul always uses for him) expected to find less suffering there than he would have faced had he remained with Paul the prisoner.

The motives of Crescens (a Latin name) and Titus are not criticized. "Galatia" probably means the Galatia in Asia Minor to which Paul addressed his letter "to the Galatians." (With some church fathers it is possible, though much less likely in view of Paul's usage elsewhere, that it refers to the land of the Gauls to the north, in what is now France, which was the original "Galatia." If so, this would be the only explicit reference to non-Mediterranean Europe in the *New Testament.) Titus had gone to Dalmatia, which was near Nicopolis, where Paul had arranged to meet him earlier (Tit 3:12). If Timothy came over land to see Paul (2 Tim 4:13), he would probably pass through at least Thessalonica and Dalmatia (the latter on the Adriatic coast), and Paul gives him advance notice that he would find some of his former companions in this area.

4:11. Although "Mark" was a common name, among the limited number of close associates of Paul it almost certainly refers to John Mark of Acts, as in Colossians 4:10. Others besides Luke were with him in Rome (2 Tim 4:21), but Luke was the only traveling companion he and Timothy had shared; he was probably also the only one in Rome specifically to be with Paul.

4:12. Tychicus is bearer of the letter (cf. 1 Tim 1:3), a mutual traveling companion of Paul and Timothy (Acts 20:4; Col 4:7). Because the only Roman mail service was by imperial envoys for government use, personal mail had to be carried by travelers.

4:13. Prisoners' friends could supply their needs, but only if permitted by prison officials and guards, who sometimes demanded bribes. The sort of cloak mentioned was like a blanket with a hole for one's head; the ease with which it could be donned probably made it popular with travelers. It was useful only in cold or rainy weather; Paul had apparently left it at Troas when it was becoming warm and had not been able to return for it. Now, imprisoned, Paul is cold and anticipates the approach of winter soon after Timothy's arrival (cf. 4:21). (Some commentators have suggested that the term refers here not to a coat but to a wrapping for books; although this meaning is possible, most of the purported evidence for it derives from comments on this verse!)

Some commentators have suggested that the "parchments" refer to certificates (e.g., to prove Paul's citizenship), but it is not clear that certificates took this form in this period. The term was, however, already in use for codices (collections of papyrus sheets with a cover, as opposed to scrolls), a form of book already in existence but popularized by Christians. They were originally used for notebooks, account ledgers and other nonliterary purposes; Christians quickly popularized them, using them for the Scriptures. Some suggest that Paul might have notebooks for Scripture study in view; the other "books" could be papyrus scrolls, the most common form of writing in this period.

Paul apparently expects Timothy to journey northward to Troas, from which he would cross over to Macedonia and take the main Roman road through Thessalonica and to Dalmatia, sailing thence to Italy (though cf. 4:21).

4:14-15. Many coppersmiths lived in the eastern Mediterranean, but working with copper produced so much noise that Alexander, unlike Paul the leatherworker, could not have engaged in much discussion at work. He thus could not have gained much of a following until his workday was ended (unless he was a former coppersmith now living off his false teaching).

Alexander may be the false teacher of 1 Timothy 1:19-20, although this name was

common. The term Paul uses for "did me harm" was sometimes used of *delatores,* "accusers"; it is not clear whether Paul also refers to Alexander as the one who betrayed him to the Roman authorities. Paul was probably not arrested in Ephesus, because he had spent the preceding winter in Nicopolis; he may have been on his way to Rome and simply arrived in time for Nero's persecution (Tit 3:12; cf. 2 Tim 4:10). Paul had earlier faced conflict with many metalworkers in Ephesus (Acts 19:24-29).

The psalmist often prayed for God to vindicate him and repay his enemies (e.g., Ps 17:13-14; 35:1-8, 26; 55:15; 69:22-28). Grammatically, Paul here makes a prediction (future tense) rather than a prayer for vengeance (cf. Ps 52:5; 55:23; 63:9-10; 73:17-20; etc.); nevertheless, his point is that God will put things right on behalf of his servants in the end.

4:16. Here Paul probably refers not to the detention of Acts 28:30-31, which presumably ended favorably, but to a more recent hearing after his rearrest. This would have been a preliminary hearing, a *prima actio*, before a Roman magistrate (in practice, probably not the emperor himself).

4:17-18. Paul may allude to David's or Daniel's exploits of faith in the *Old Testament (1 Sam 17:37; Dan 6:27; cf. 1 Maccabees 2:60); Daniel was sent to the lions by the decree of a king, albeit a reluctant one. The image of a lion in ancient literature is one of supreme strength, appropriately applied here to Nero's court. Under Nero's persecution in which Paul died, some Christians were literally fed to beasts in the arena, but Paul uses "lion" metaphorically, as often in the Old Testament (e.g., Ps 7:2; 10:9; 17:12; 22:13, 21). The term translated "delivered" meant earthly rescue and safety (v. 17) but was also applied to ultimate salvation (v. 18). Prayers seemed natural in ancient letters, because ancient life was permeated by religious belief and practice.

4:19-22
Conclusion

4:19. Letters often closed with greetings. Aquila and Priscilla, who had left Ephesus (Acts 18:24-26) for Rome (Rom 16:3), had returned to the work in Ephesus—probably recently, because Paul did not comment on their help in 1:16-18 (contrast also 1 Tim 2:11-12 with Priscilla's ministry in Acts 18:26); only Paul's traveling companions, probably mainly single men, are mentioned in 4:10-12 and 20. Persecution in Rome may have invited their relocation. On the household of Onesiphorus, see comment on 1:16-18.

4:20. Letters customarily mentioned news about friends, who included these former traveling companions of Timothy (Acts 19:22; 20:4). For how Trophimus's illness might have been viewed, see comment on Philippians 2:25-30.

4:21. The seas were closed down to traffic in winter; shipping was completely closed down from around November 10 to as late as March 10, but the periods from about September 15 to November 10 and March 11 to May 26 were potentially risky periods as well. Some ships took the risks, even in winter, for the sake of profits, but finding passage in winter would be very difficult. Timothy thus could not sail from Ephesus in winter, but even if he took the overland route north of Greece, as Paul seems to expect (4:13), he would still need to sail across the Adriatic, which would also be difficult. If Timothy delayed, he would not be able to come until spring—and Paul might not still be alive then. If Paul sent this letter by Tychicus in summer, Timothy would have little time to set matters in order and come to him.

"Pudens," "Linus" and "Claudia" are Latin names. Jewish people could have Latin names ("Claudia" would fit a slave woman freed during Claudius's reign); about half of Roman Jews had Latin names. That three out of the four names are Latin might suggest that Christianity was making inroads into new sectors of Roman society. If they are church leaders (although only these are named, Paul appends "all the brethren" as a distinct group), the woman's name is significant. Second-century tradition declares that Linus succeeded Peter as the second bishop of Rome.

4:22. The final "you" is plural in Greek; Paul's final greeting includes Timothy's fellow servants in Ephesus (4:19).

Titus

Introduction

Authorship, Purpose, Commentaries. See introduction to 1 Timothy. Like 1 Timothy, this letter to Titus seems to function more as a letter authorizing Titus than as a personal letter only.

Situation. Paul left Titus behind in Crete to establish *church leadership in each city there (1:5). The description of the opposition (1:10-11, 14) sounds much like what Paul addressed at Ephesus in 1 Timothy, suggesting that the error addressed there is spreading rapidly among Christian congregations. Paul's old opponents, those of the circumcision group he encountered in Galatia, apparently continue to follow on his heels to "correct" his converts (1:10, 14). Although they won over many of his early converts, their views eventually lost ground; but Paul did not live to see his views prevail (2 Tim 1:15).

1:1-4
Introduction

As in 1 Timothy, here Paul omits many features customary to his letters (such as thanksgiving and, less often, mention of prayer) and goes right to the point with his instructions.

1:1. Letters customarily opened with the name of the sender. It could be prestigious to be the slave in a high-status household, and the *Old Testament prophets were often called "servants of God." Many Jewish people believed that they were chosen for salvation by virtue of their corporate participation in Israel; as usual, Paul applies the term to all believers in Jesus (possibly to help ideas mentioned in 1:10).

1:2-3. Jewish sources traditionally employed the phrase "*eternal life" to mean the "life of the world to come," which (according to Jewish teaching) was to be inaugurated by the future *resurrection of the dead. That God could not lie, that he had spoken through the prophets from the beginning and that the future resurrection could be proved from the earliest parts of the Bible fit common Jewish teaching and could not be disputed by his opponents (1:10). (The *Stoics taught the immutability of divine decrees, but the Stoic form of the doctrine allowed God less freedom to interact with human will and prayers than most of Judaism did. By contrast, in Greek myths, deities readily deceived mortals, but such a view of divinity was rejected by most philosophers and ridiculed by Judaism.)

1:4. After naming the sender, letters named the recipient(s) and conveyed an expression of greeting. Philosophers and *rabbis spoke of their *disciples as their children; cf. 1 Timothy 1:2 and 2 Timothy 1:2.

1:5-9
Appointing Sound Elders

1:5. In the *Old Testament, cities were ruled and judged by their "elders," those with the greatest wisdom and experience in the community. By the *New Testament period, prominent older men in *Diaspora *synagogues were called "elders." Although their exact role may have varied from one place to another, often a group of elders provided leadership for a synagogue (in Judea, cf. 1QS 6.8-9 in the *Dead Sea Scrolls). Paul followed the convenient, conventional forms of synagogue leadership in his culture rather than instituting entirely foreign leadership structures. "In every city" meant that the different house churches in each city would each have their own leaders. Like much of old Greece, Crete had long been known for intercity rivalry.

1:6. The requirement for being "above reproach" (NASB) was vital for leaders in antiquity (see comment on 1 Tim 3:2). "Husband of one wife" probably meant "a faithful husband"; like the requirement about the children, this one suggests that he be a family man and a leader in his household (see further discussion at 1 Tim 3:2). These were necessary aspects of being respectable in antiquity and were qualities often examined with regard to suitability for public office. (The Old Testament also emphasized filial obedience under normal conditions; cf. Deut 21:20.) Because they are "elders," and "dissipation" (NASB; the term can mean overindulgence but often means wasting money, often on selfish pleasures like drunkenness) was a vice stereotypically attributed to young men, not children, these elders are apparently held responsible for the behavior of their adult children (adulthood being reached in the mid-teens). In the Roman world, sons were to respect their fathers, who had legal authority to rule their sons as long as they lived.

1:7. "Stewards" were household managers, often slaves or freedmen, accountable to the master for how they handled his property; this term fits particularly well the image of leaders of household churches. The drunken worship of Dionysus was known on Crete, and the Christian leaders' behavior must not be confused with it in any way (some people ignorantly confused Judaism with the cult of Dionysus, and Christians were generally viewed as part of Judaism). But avoiding drunkenness was also important for other reasons (Prov 20:1). Those "given to wine" (KJV, NASB) were also often recognized as abusive and given to fighting as well.

1:8. "Hospitality" included housing, feeding and treating graciously travelers needing a place to stay. (Christian travelers, like Jewish ones, would have normally carried letters of recommendation attesting that they could be trusted.)

1:9. Elders had to be trained to refute current false teachings before they were appointed; for the false teachings in view here, see comment on 1:10-16. The "word" in Judaism would be especially the *law, but Paul means the apostolic message (see comment on 2 Tim 4:2).

1:10-16
Evil Legalists

Although the opponents here are probably related to opponents Paul had faced elsewhere, they may have derived some of their appeal from local knowledge of Judaism and possibly a strong Jewish element within the church. Crete was ethically mixed, and a large Jewish colony was there.

1:10. "Empty talk" (NASB) characterized many pseudointellectuals in antiquity; see comment on 1 Timothy 1:6 and 2 Timothy 2:14. The Jewish community in Crete was sometimes exploited by charlatans (e.g., *Josephus, *Jewish Antiquities* 17.327).

1:11. "Upsetting whole families" (NASB) could mean that, by gaining entrance to families, these false teachers were disrupting entire households (cf. 2 Tim 3:6-7), or that they are "subverting" (KJV) households. Perhaps they are undermining the authority structures current in the culture (Tit 2:4-5, 9-10); less likely, they may oppose marriage or sex within marriage on *ascetic grounds (see comment on 1 Tim 4:1-3; 1 Cor 7:1-7). Neither error was characteristic of Palestinian or *Diaspora Judaism, although many *Essenes advocated celibacy.

On those who taught for "gain," see comment on 1 Timothy 6:3-10; this accusation was commonly leveled against traveling teachers of morality, probably including Paul (1 Thess 2:5). A writer long before Paul charged that the Cretans were known to be more fond of gain and more dishonest than any other people.

1:12. Outsiders complained that Cretans lusted for wealth, leading to violence (Polybius 6.46.9) and were deceptive (8.19.5). (When convenient, Romans sometimes complained that Greeks more generally used falsehood; *Cicero, *For Flaccus* 4.9-10; 5.11-12; Pliny, *Natural History* 37.11.31.) The saying Paul quotes here has been attributed to several sources, the earliest being the sixth-century B.C. teacher Epimenides of Knossos in Crete. (The real source may more likely be Hesiod by way of the third-century B.C. Callimachus's *Hymn to Zeus*. As was widely known, Crete claimed to possess both the birthplace and grave of Zeus; the latter claim drew outsiders' scorn and charge of falsehood. But that the words were often attributed to a Cretan in Paul's day is sufficient for him to make the point for Titus. Paul is clearly not citing his own view, because he would not consider a liar to be a true prophet. Greek logicians played with the claim by a Cretan that all Cretans were liars: if he had told the truth, he was lying; but if he was lying, then they reasoned that all Cretans told the truth—reasonable, except that this Cretan had not!)

By Paul's time Epimenides was reputed to have been a traveling wonderworker, teacher and prophet; as usual in Greek thought, the line between poetic and prophetic inspiration could be thin. Although the saying seems to have become proverbial (one commentator declares that "to cretize" became slang for "to lie"), it is not impossible that Paul knew the works of Epimenides; it seems much more likely, however, that he knew only the attributed saying or at most an anthology containing sayings attributed to Epimenides (see comment on Acts 17:27-29).

Crete also had a bad reputation for arrogance, treachery and greed. "Gluttony" was associated with love of pleasure as opposed to love of knowledge; see comment on Philippians 3:19.

1:13. Ancient ethnographers attributed certain characteristics (both good and bad) to various peoples whose cultures emphasized those traits. (That Paul could cite these negative characteristics of Cretans in a letter that Cretan believers would hear suggests that he must have been on very good terms with them and that Cretans recognized these characteristics of their own culture; he is not offering here a model for crosscultural sensitivity in normal situations.)

1:14. Jewish "myths" would especially be *haggadoth,* stories amplifying or explaining biblical *narratives. *Pharisees and others who tried to expound and apply biblical *law for their own times were forced to surround it with case law, detailing how the *Old Testament rules addressed specific situations;

Paul apparently dismisses such legal traditions here.

1:15. The Old Testament law considered some foods pure and other foods impure (cf. 1:14), but Paul applies the common figurative extension of purity language to moral and spiritual purity (see 1 Tim 4:3-5; cf. Rom 14:14).

1:16. In the Old Testament, "knowing God" was being in covenant relationship with him; on a personal level, this meant an intimate relationship of faithfulness to him. But the claim was false if not accompanied by just treatment of others and obedience to the Scriptures (Hos 8:2-3; Jer 22:16).

2:1-14
Sound Doctrine: Right Relationships

Because the Romans suspected minority religions, especially religions from the East with ecstatic elements to their worship, of subverting traditional family values, minority religions often followed the philosophers in exhorting adherents to follow "household codes." These codes instructed male heads of households how to treat each member of the household, especially wives, children and slaves. Under the broad topic of "household management," such codes also extended to treatment of parents, duties to the state (3:1) and duties to the gods. Because the *church met in homes and was viewed as a sort of extended family around the household of the *patron in whose home the believers met, the instructions naturally quickly extended to categories of relationships in the church.

Early Christian adaptation of Roman social relations was valuable for the church's witness to society and for diminishing preventable opposition to the *gospel (2:5, 8, 10). Modern readers often recognize only the traditional values of their own culture, but one should recognize that Paul addresses instead the traditional Roman values of his day (including the household slavery of his day, which differed from many other societies' models of slavery).

2:1. Because the false teachers were subverting households, the "sound" teaching (cf. 2:15) Paul supplies in this case applies especially to household relationships (2:2-14). Households were defined in terms of hierarchy and dependence (e.g., slaves to masters or *clients to patrons) rather than strictly in terms of blood relationship.

2:2. This description matches the expectation for venerable older men in Roman culture: dignified, serious, sober.

2:3. Older women were often objects of ridicule in comedies and were especially mocked for gossip and foolish talk (see comment on 1 Tim 4:7). Some caricatured older women as drunken and as sexually desiring younger men; many men resented drunkenness especially in women.

2:4. It had long been customary for older women, especially mothers, to instruct their daughters in the ways of life (even in ancient Israel, e.g., Jer 9:20); some philosophers wanting to advise women even wrote *pseudepigraphic letters purportedly from women, telling women how to behave. The Roman mother's chief duty to her daughter seems to have been to help her acquire the appropriate education (especially to be a good mother) and to help her to please a good husband. "Young women" were almost always wives, because Jewish and Greco-Roman society generally frowned upon women's singleness and men seem to have outnumbered women. Both Judaism and ancient moralists stressed that wives should love their husbands and nurture their children; many tomb inscriptions report these characteristics as a woman's crowning virtue.

2:5. The term translated "sensible" (NASB) means "self-controlled" (NIV, NRSV, GNT) or disciplined, one of the central Greek virtues; when applied to women, it entailed "modesty," which included virtuously avoiding any connotations of sexual infidelity. In the traditional Greek ideal (far more than in actual practice, especially by this period), women were also to be secluded in the privacy of their home, because they were supposed to be the visual property of their husbands alone. They ruled the domestic sphere to which they were limited but were expected to obey their husbands in everything (Paul's "submissive" [NRSV] may be weaker than "obedient" [contrast KJV]). Women were also expected to be quiet, docile and socially retiring. To violate such social customs was to lend credence to the charge that Christianity was socially subversive, a charge that would provoke more

persecution for the small but growing faith than most of them, both women and men, would have felt it worth.

2:6-8. The men also are to be self-disciplined, and Timothy was to provide a model for them, as a good teacher should. Paul uses the expression "good deeds" in a variety of ways (see 1:16; 2:14; 3:1, 8, 14; 1 Tim 2:10; 5:10; 6:18; 2 Tim 2:21; 3:17). On seeking to forestall false accusations, see the introduction to 2:1-14.

2:9-10. Although masters legally held absolute authority over household slaves (the sort of slaves addressed in this household context), in most cases household slaves held freedoms that field or mine slaves did not, and they had more adequate provision than most peasants. In the popular stereotype entertained by slaveholders, slaves were lazy, apt to argue with their masters and liable to steal when they could. The stereotype was sometimes true, especially where the work incentive was least, but Paul urges Christian slaves not to reinforce the stereotype. Minority religions were already viewed as subversive, and to counter this prejudice Christians had to work especially hard to avoid the normal causes of slander. For more on slavery in general, see the introduction to Philemon.

2:11. The believers were to live in a respectable way to counter false accusations (2:8-10) so that all would have access to the gospel according to which they lived. On prejudice against minority religions, see the introduction to 2:1-14. That God's *grace had provided (though not automatically effected—cf., e.g., 1:10) salvation for all people ran counter to the Jewish emphasis on God's special redemption of Israel and prevailing sentiments of cultural distinctions held by many people in antiquity (though Judaism allowed that some righteous *Gentiles would be saved, and philosophers and some mystery religions challenged conventional cultural boundaries).

2:12. Two ethical terms Paul employs here were among the four cardinal virtues of ancient Greek philosophers and moralists. A similar list occurs in Philo, a Jewish philosopher who wished to present Judaism favorably to the Greek society of Alexandria, to which he also felt he belonged.

Jewish sources frequently contrasted the present age, dominated by evil and suffering, with the *age to come, when God would rule unchallenged and reward his people. Although some oppressors through history have used such a doctrine to keep the oppressed subdued, it more appropriately found its first hearing among the oppressed themselves. Palestinian Jews felt discouraged by Roman repression and the lack of independence to practice their law fully; *Diaspora Jews and Christians found themselves a moral minority in a morass of paganism, subject to slanders and sporadic violence. Their hope for the future was rooted in their faith in God's justice.

2:13. In Judaism, the ultimate revelation or "appearing" of God would signal the end of the present age and the beginning of the new one (cf. 2:12). Diaspora Judaism commonly called God "the great God" and saw him as a "*savior" (in Greek religion, the latter term often meant deliverer or benefactor). According to the most likely reading of the grammar here, Paul applies this divine title to Jesus; although some Jewish circles thought of semidivine beings (often particular exalted angels) or images (especially Wisdom), Judaism did not portray any other human figure as literally divine (or, from recent history, even figuratively divine, as *Philo did with Moses based on Ex 7:1).

2:14. In the *Old Testament God "redeemed" the people of Israel (i.e., freed them from slavery in Egypt) to make them "a special people" (Ex 19:5; Deut 4:20; 7:6; 14:2; cf. 1 Sam 12:22; 2 Sam 7:24; Ps 135:4); here Paul applies this language to the church.

Judaism strongly praised "zeal" for God. Although zeal was sometimes associated with Jewish revolutionaries (some of whom were or came to be called *Zealots) in this period, more often it simply meant uncompromising zeal for the *law or for God. (Although unlikely, it is possible that the Jewish colony in Crete was affected by the same revolutionary tensions building in Cyrene, which was on the North African coast far to the south but under the same Roman administration. These tensions erupted into violence in Cyrene about A.D. 72 [Josephus, *Jewish War* 7.437-50] and into a full revolt about four decades later. These revolutionary sentiments had been stirred by surviving revolutionaries from Palestine.)

2:15–3:8
The Purpose of a Lifestyle Witness

Paul here provides his reasoning for their lifestyle witness (2:5, 8, 10): God wants everyone to be saved, and he paid a great price to accomplish this salvation. Now the only way to counter the world's negative conception of Christianity is to live irreproachably.

2:15. Paul encourages Titus to pass on the sound doctrine of 2:1-14.

3:1. Allegiance to the state and submission to its authorities were often part of the same sorts of exhortations as the household duties (see the introduction to 2:1-14). They were as important as, or possibly more important than, household duties in undermining slander about subversiveness, because the Romans hated nothing worse than cults they deemed seditious.

3:2. The epitome of right relationships was being kind toward everyone, including one's enemies; this injunction is a fitting climax to Paul's rules on relationships.

3:3-4. Philosophers sometimes exhorted people to imitate God's character; Paul here uses God's kindness toward sinners in saving them to argue why Christians should be kind to all people, even their enemies. Philosophers described the majority of people as "enslaved by passions and pleasure," until they were freed from this bondage by the truth of philosophy; Paul agrees with their evaluation of the human plight but sees a different solution for it (3:5).

Paul's term for God's "love for humanity" here was used by pagan moralists especially for the sort of sympathy humans as humans should have for one another; for Paul, God in *Christ has sympathy for humanity. (Sometimes the term was also applied to the supreme God, but more often it was applied to the benevolence of the emperor.) Paul shows how the most valued genuine virtues of his culture reflected God's own character.

3:5. The *Essenes and some other Jewish people associated the *Spirit with purification, especially based on Ezekiel 36:25-27, where God cleanses his people from their idolatry. Because *baptism was the decisive act of conversion in Palestinian Judaism, it figures as the natural image for conversion here (see comment on Jn 3:5).

3:6. For the Spirit being "poured out," see Joel 2:28 (cited in Acts 2:17).

3:7-8. "Justified" meant "judged righteous" or "acquitted" before God's court; according to the *Old Testament and Jewish teaching, one must condemn the guilty and acquit only the innocent. But in the Old Testament, God by his covenant love had also promised to vindicate his people and declare them in the right for their faithfulness to him; see comment on Romans 1:17. "Heirs" reflects the Old Testament image of inheriting the Promised Land, a picture naturally developed in early Judaism for entering the future *kingdom.

On "*eternal life," see comment on 1:2-3; on "hope," see also comment on 2:13. For Paul, as for Judaism, eternal life would be fulfilled at the *resurrection of the dead at the end of this age and beginning of the next. But for Paul the hope was already inaugurated by Christ's resurrection.

3:9-11
Avoid Divisiveness and Divisive People

Part of maintaining a gentle, nonresistant life among members of the Christian community (3:1-2; cf. Gen 26:18-22) involved dissociating oneself from those who would violate one's witness by their disobedience.

3:9. Genealogies and details about the *law (including arguments of Jewish legal scholars over spellings or vocalizations of Hebrew words) were minutiae that missed the genuinely critical issues in the spirit of the Old Testament (see comment on 1:10; 1 Tim 1:6; 2 Tim 2:14).

3:10-11. The noun related to the term translated "factious" (NASB) or "divisive" (NIV) came to designate different sects of philosophers, and *Josephus used it to designate different schools of thought within Judaism. But the adjective here is normally negative, as here (also Gal 5:20; cf. 1 Cor 11:19), for sectarian or divisive tendencies. Paul might refer to the false teachers or to their *disciples in the congregation (cf. Tit 3:9 with 1:10).

Jewish law required several private rebukes before bringing a person before the religious assembly for discipline; this procedure gave the offender ample opportunity to repent. One severe form of punishment against an unrepentant offender was exclusion from the religious community for a set time or until *re-

pentance ensued. Because Paul uses this penalty only in the most extreme circumstances, the divisiveness in view here must be serious; the person has already excluded himself from the life of the community.

3:12-15
Concluding Business

3:12. Nicopolis was on the Greek side of the Adriatic coast, about two hundred miles east of Italy. Located near the coast and only about a century old, it was not a major city that would be likely to occur to a pseudepigrapher. It was in this city that the *Stoic philosopher *Epictetus, banished from Rome, settled three decades later, so it might have also invited philosophical debates (and hence opportunities for Christian witness) in Paul's day. Apparently wishing to go on to Rome, Paul is going to leave Asia, cross Macedonia and wait in Nicopolis for Titus, who is to come up from Crete after receiving Paul's message. Sea travel was not possible during winter, so Paul would wait there (see comment on 2 Tim 4:21). Titus later walked northward to minister in Dalmatia (2 Tim 4:10), where some work may have been initiated before (Rom 15:19, referring to the same region). Because Paul later sent Tychicus from Rome to Timothy (2 Tim 4:12), it was probably Artemas he sent to Titus. (Although the name "Artemas" was compounded on the name of the Greek goddess Artemis, one cannot draw any conclusions about whether he was Jewish or *Gentile. By this period Jewish names in Egypt and possibly elsewhere were compounded with "Artem-" roots; cf. the analogously Jewish Christian "Apollos," taken from the name of the Greek god Apollo.)

3:13. "Lawyer" could refer to a Jewish legal expert, but in the *Diaspora it could also refer to a jurist of Roman law. Legal cases were more the domain of trained *rhetoricians (like Apollos; see comment on Acts 18:24) than jurists, but the latter could also be prominent men. (In contrast to some other ancient professionals like physicians, who were sometimes slaves, lawyers were generally of higher social status.) Like most names, "Zenas" is attested as a name in Jewish funerary inscriptions, so his name cannot settle his ethnicity; perhaps both he and Apollos were from the educated Jewish elite in Alexandria. (If so, he was likelier an expert in Jewish *law, though an elite Alexandrian Jew could also have studied Greek laws.)

This verse constitutes a miniature "letter of recommendation" to provide hospitality to Zenas and Apollos (see comment on 1:8), who may be the bearers of this letter to Titus. "Help" means to supply their needs, providing for them to continue their voyage to their destination, perhaps to the south in Cyrene or Alexandria.

3:14. Here Paul enjoins charity (see comment on 2 Cor 9:6-8; Gal 6:6-10).

3:15. Such greetings were customary at the end of a letter, at times including expressions like "those who love you" (here to designate to whom general greetings most suitably applied).

Philemon

Introduction

Authorship. Almost all scholars accept this letter as Pauline; the style and substance are characteristic of Paul.

Slavery and the Setting of Philemon. Like other slave laws, Roman law addressed the dual status of slaves: by nature they were persons, but from an economic standpoint they were treated as property. The head of a household could legally execute his slaves, and they would all be executed if the head of the household were murdered. Slaves composed a large part of the agricultural work force in parts of the empire (e.g., Italy); they competed with free peasants for the same work. The mine slaves had the worst life, dying quickly under the harsh conditions of the mines. Male household slaves generally had life better, though female household slaves (and sometimes boys) were vulnerable to sexual exploitation by slaveholders. Household slaves were the only kind of slaves addressed in Paul's writings.

But urban slaves were found in all professions and generally had more opportunity for social advancement than free peasants; unlike the vast majority of slaves in the United States and the Caribbean, they were able to work for and achieve freedom, and some estimate that as many as half of household slaves may have had the opportunity to become free at some point in their lives (at least if they lived long enough). Some freed household slaves became independently wealthy; at least in Roman custom, their former holders became their *patrons and were supposed to help them advance in society. Economically, socially, and with regard to freedom to determine their future, many of these male household slaves were better off than average free persons in the Roman Empire; many—scholars commonly say most—free persons were rural peasants working as tenant farmers on the vast estates of wealthy landowners.

Some philosophers said that slaves were equals as people, but in this period they never suggested that masters should free their slaves. (Earlier *Stoics were more radical, but the movement eventually became more mainstream. *Cynics invited prospective followers to abandon everything because they needed nothing, not to free slaves because slavery was wrong.) Nearly everyone took the institution of

slavery for granted, except early Stoics who said that it was "against nature." Paul's message to Philemon goes beyond other documents of his time in not only pleading for clemency for an escaped slave but suggesting that he be released (to continue working with Paul in ministry) because he is now a Christian. So powerful was this precedent that many of the earliest U.S. slaveholders did not want their slaves to be exposed to Christianity, for fear that they would be compelled to free them; the Christian message had to be domesticated (like early Stoicism) to become neutral or supportive of slavery. Cf. Albert J. Raboteau, *Slave Religion* (New York: Oxford University Press, 1978).

Slaves, especially skilled or educated males, were often sent on errands and trusted as agents with their masters' property. Such slaves could sometimes earn enough money on the side to buy their freedom (although their earnings legally belonged to their master, slaves were normally permitted to control the money themselves); still, a few took the opportunity of an errand to escape. Because a safe escape required them to get far away from where their master lived (in the case Paul addresses here, from Phrygia to Rome), they might take some of their master's money with them. Recapture normally meant severe punishment.

Such theft may be the point of verse 18, but Paul might there account for the possibility that Philemon wants repayment for Onesimus himself. From the standpoint of ancient slaveholders, the lost time of an escaped slave was lost money and was legally viewed as stolen property, to which one harboring him was liable. But more important, slaves themselves were not cheap, and Philemon might have already bought another slave to replace him. Slaves could cost between 750 sesterces (187.5 denarii) and 700,000 sesterces (175,000 denarii), with 2,000 as an average. (Keep in mind that a denarius was close to a day's wage for many farmers in this period.)

*Old Testament *law required harboring escaped slaves (Deut 23:15-16; contrast Josephus, *Jewish War* 3.373), but Roman law required Paul to return Onesimus to his master, with serious penalties if he failed to do so. Paul uses his relationship with Philemon to seek Onesimus's release: in a standard "letter of recommendation," one would plead with someone of equal (or sometimes lower) status on behalf of someone of lower status. Paul was not Philemon's equal socially, but as his spiritual father he had grounds to claim the equality that characterized ancient friendship.

Structure and Form. This letter is a "letter of recommendation," the sort that a *patron wrote to social peers or inferiors on behalf of a dependent *client to ask a favor for him. Some compare it more specifically with a letter that Pliny the Younger later wrote a friend on behalf of an estranged freedman who had pleaded for Pliny's intercession. Somewhat differently, Pliny allowed that the slaveholder had a right to be angry; the principle of a friend's intercession, however, is similar. If one classified Paul's letter *rhetorically, it would be "deliberative rhetoric," the type of speech or writing educated persons in antiquity used to persuade others to change their

behavior or attitudes. Letters were not speeches, but the form of argumentation in speeches can help us appreciate Paul's approach to persuasion here: his *exordium,* or opening appeal (vv. 4-7), is followed by the main argument, consisting of proofs (vv. 8-16), which is followed by the *peroratio,* or summary of his case (vv. 17-22). Paul uses methods of argumentation common in his day to persuade well-to-do and well-educated Philemon, who would find such arguments persuasive. The preservation of the letter suggests that Paul succeeded in persuading Philemon, who would not have kept it and later allowed it to be circulated had he not freed Onesimus. The shortest of Paul's extant letters, this letter to Philemon would have occupied only a single sheet of papyrus.

Commentaries. See under Colossians; additionally, Joseph A. Fitzmyer, *The Letter to Philemon,* AB 34C (New York: Doubleday, 2000). For Paul's views on slavery, see S. Scott Bartchy, *First-Century Slavery and the Interpretation of 1 Corinthians 7:21,* SBLDS 11 (Missoula, MT: Society of Biblical Literature, 1973); compare also Craig S. Keener, *Paul, Women and Wives* (Grand Rapids: Baker Academic, 1992), pp. 184-224, for some general considerations of Paul's words to household slaves.

1-3. On house *churches see comment on Acts 12:12 and Romans 16:5. Well-to-do owners of homes in which ancient religious groups met were normally granted positions of honor in those groups, as their *patrons. Ancient writers defined households not by blood relations but by hierarchical relationships: the free man and his wife, children and slaves (though only those with sizable incomes could afford slaves). The addressees are located in Phrygia (cf. Col 4:17). (This location is based on more helpful evidence than the character of the names. Although a much more common Phrygian name than "Philemon," "Apphia" is also attested elsewhere, including Palestine.) "Fellow soldier" (v. 2) reflects the military imagery common in Paul's letters (see comment on Rom 13:12; Phil 2:25).

4. Many pious Jews observed times of regular prayer; see comment on Romans 1:10. Thanksgivings were common in letters, and Paul here (vv. 4-7) follows his usual custom of using his thanksgiving the way speakers might use a complimentary *exordium.* Such *exordia* were commonly used in speeches to praise the hearers, thus securing their favor.

5-6. The term translated "fellowship" (NASB, GNT) or "sharing" (NRSV) or "partnership" (NIV) was often used for business partnerships or for sharing possessions (see v. 7). Philemon acts as a patron for the church (v. 2).

7. Hospitality was considered a paramount virtue in Greco-Roman antiquity, especially in Judaism. Well-to-do hosts often gathered those one rung below them on the economic ladder, sometimes members of their own religious group, to their home and provided a meal; Philemon and other well-to-do Christians sponsored the meals in their house churches. Mention of a shared friendship between the writer and recipient was a common feature of ancient letters; it was especially important in letters of friendship or when the writer was about to request a favor from the letter's recipient.

8. Although Philemon has high social status—something particularly valued in his culture—he recognizes Paul's higher spiritual rank in the faith. Philosophers were often sponsored by such well-to-do persons as lecturers at banquets or teachers, but Paul claims a higher role than a mere philosopher would fill. Philosophers could be *clients of wealthy patrons, but Paul implies that he is Philemon's spiritual patron here. Philosophers used the expression "what is proper" (NASB; "what you ought to do"—NIV) as a criterion for ethical judgments.

9. *Rhetoricians (those who specialized in public speaking) liked to argue this way: "I could remind you of this, but I won't"—thus reminding while pretending not to do so. Respect for age was important in his culture, so Paul appeals to his age. (According to one ancient definition, the term Paul uses here ["aged"—KJV, NASB; "old man"—NIV, NRSV] applied to ages forty-nine to fifty-six; but *New Testament writers often use it loosely for anyone no longer "young." On the basis of other New Testament evidence, Paul may be around fifty-seven, give or take five years.) Shared friendship was also used as the basis for a request; friends were socially obligated to grant and return favors.

10. Teachers often called *disciples "sons." The point of Paul's plea is that one could not enslave the son of one's own spiritual patron. Appeals to emotion were a necessary part of most ancient argumentation.

11. Here Paul makes a wordplay on Onesimus's name, which means "useful." It was a common slave name, for obvious reasons. The well-to-do had a stereotype that slaves—explicitly including Phrygian slaves—were lazy and ill-disciplined.

12-14. Slaves were sometimes freed by their masters to become slaves of the temple of some god; here Paul asks that Philemon free Onesimus for the service of the *gospel. He appeals not to his own authority but to Philemon's honor as a friend. Runaway slaves were known to be fearful of being captured and taken back to their masters, and Paul's concern for Onesimus is here evident.

15-16. Roman law saw slaves as both people and property; but a full brother would naturally not be viewed as property. The phrase "receive him back" or "have him back" resembles that found in business receipts, but here it is not a property transaction in which Philemon receives Onesimus back as a slave, but like welcoming back a family member. "Parted from you" (NASB) implies the sovereignty of God, a doctrine accepted by Judaism

and no doubt assumed by Philemon.

17. "Partner" was often a formal business term (see comment on v. 6). In status-conscious Roman society, Paul is telling a social superior who respects his ministry: we are equals, and if you accept Onesimus as my agent (authorized representative), you must accept him as an equal (see, e.g., comment on Mt 10:40). Ancient letters of recommendation commonly appealed to friends to consider the bearer of the letter "as if he were me" (cf., e.g., Oxyrhynchus papyri 32).

18-19. Here Paul employs language normally used for formally assuming debts; letters acknowledging debt normally included the promise "I will repay" and were signed by the debtor in his own handwriting. Because it is in writing, this offer would be legally binding in the unlikely event that Philemon would take Paul up on it. But Philemon also owes a debt to Paul; again Paul uses the *rhetorical technique of "not to mention" something he then mentions (vv. 8-9). By ancient social custom, friends were bound by the reciprocal obligation of repaying favors; Philemon owes Paul the greatest favor—his "self," his new life in conversion. Letters of recommendation could urge the recipient to count any favor toward the recommended as a favor toward the recommender (cf. Cicero, *Letters to Friends* 13.5.3).

20. Compare the "refreshing" of verse 7; Paul asks for the same hospitable character that Philemon shows the church.

21. "Do even more than what I say" (NASB) means that Philemon will free Onesimus (cf. vv. 12-14). Professional speakers often sought favors in such terms: "Knowing your goodness, you will gladly hear me" or "grant me such-and-such a request."

22-25. Well-to-do patrons offered hospitality, which Paul can expect as Philemon's spiritual peer. Indeed, providing lodging for prominent guests was regarded as an honor.

Hebrews

Introduction

Style. Along with Luke-Acts and some of the other "General Epistles," this document displays the most sophisticated Greek style in the *New Testament; its author must have had sophisticated *rhetorical training and literary skills.

Date. Because Timothy was recently freed (Heb 13:23) and the work was apparently written from Italy (13:24), we may guess that Timothy was arrested in Rome during the Neronian persecution (probably some time after he came to see Paul—2 Tim 4:21) and freed when Nero (and his policy) died in A.D. 68. The mention of Timothy but not Paul, who died about A.D. 64, also would make sense about A.D. 68. At this time, when the outcome of the Roman war in Judea would have been assured from Rome's vantage point, it would be quite appropriate to speak of the old temple system as "passing away" (8:13), even literally—a process completed in A.D. 70 with the destruction of the temple. That the writer cannot declare that temple sacrifices are no longer offered (which could have clinched his case if he could have claimed it) suggests a date before A.D. 70.

Authorship. From a stylistic perspective, it is impossible to attribute the letter to Paul; of other New Testament writers, it is closest to Luke's literary abilities, but the style is not Lukan. The writer seems to be an influential person traveling in the same circles as Timothy (13:23) and well heeded by this audience, who are probably in the eastern Mediterranean. Silas would thus be a natural candidate (cf. Acts 16:37, in Rome about 64) and probably a *scribe (1 Pet 5:12) would have the educational level necessary for such a letter. It is more commonly suggested that the writer is Apollos, whose Alexandrian rhetorical and possibly philosophical training would have suited him especially well to write such a letter; he was certainly respected as Paul's peer in the Pauline *churches. (He seems to have been moving from Rome toward the east or south a few years before Hebrews was written—Tit 3:13—but he could have returned.) Other suggestions, like Barnabas or Priscilla, are possible but have less evidence to commend them than the proposals of Silas and Apollos.

Audience. Although some scholars question this, the audience seems fairly obviously predominantly Jewish; they are apparently under pressure to give up their

Christian distinctives (either from the *synagogue or from *Gentile persecution of Christians). Although the *Hellenistic Jewish thought in the letter would fit a number of locations including Corinth and Ephesus, the actual seizure of their property in earlier days (10:34) does not fit Corinth or Ephesus (against one commentator, who perhaps fancifully but nevertheless quite skillfully constructs a case for this letter being written to Corinth and 1 Corinthians responding to some features in it). But 13:23 suggests an audience in the Pauline circle (i.e., not in Alexandria, though Apollos was from there). The early persecution fits Thessalonica and possibly Philippi in Macedonia, although a community in Asia Minor or Syria with more ethnic Jewish representation might fit better. (Some have suggested a Roman audience on the basis of 10:32-34 and 13:23-24; the quality of Greek may fit an audience more to the east, but this argument would hardly be decisive. If we read 13:24 as suggesting a Roman place of origin, however, a Roman audience is unlikely.) Wherever the readers are located, they resonate with the intensely Greek rhetoric and interpretation of Judaism that come naturally to this author; the closest parallels are with *Philo of Alexandria. (That the letter also has parallels with the *Dead Sea Scrolls in Judea and *apocalyptic motifs should not be surprising; we must construct a composite picture of ancient Judaism based on as many diverse sources as possible. But the clear Philonic parallels point to *Hellenistic rhetorical training. The writer is not on the level of Philo but is clearly a *Hellenistic* Jew.)

Genre. Some scholars have suggested that this document is a homiletic *midrash on Psalm 110 (see Heb 13:22); one cannot deny that the interpretation of this psalm dominates the work. (The narrower suggestion that it was specifically a midrash on the readings for the Feast of Pentecost is not strictly impossible, but evidence for the triennial readings later adopted in Mediterranean synagogues is lacking in this period.) It is more like a treatise than a normal letter, apart from concluding greetings. But one ancient letter-writing form was the "letter-essay," which in early Judaism and Christianity would naturally have resembled a written homily or sermon; Hebrews could be such a "letter-essay."

Structure. Comparison was a central feature of much ancient argumentation. *Christ is greater than the angels (1:1-14) who delivered the *law (2:1-18); this contrast contributes to the writer's argument that Christ is greater than the law itself. He is greater than Moses and the Promised Land (3:1–4:13). As a priest after the order of Melchizedek, he is greater than the *Old Testament priesthood (4:14–7:28) because he is attached to a new covenant (chap. 8) and a heavenly temple service (9:1–10:18). Therefore, his followers ought to persevere in faith and not go back, regardless of the cost (10:19–12:13). The writer follows his theoretical discussion, as many letters did, with specific moral exhortations tied into the same theme (13:1-17). Interspersed throughout the letter is the repeated warning against apostasy, noting that the penalty for rejecting the new covenant is greater than that for rejecting the old

had been (cf. 2:1-4; 3:14; 4:1-2, 11; 6:1-8, 11-12; 10:26-31; 12:14-17, 25; though cf. expressions of confidence with reasons in 6:9-10; 10:39).

Argumentation. The writer argues from Scripture the way a good Jewish interpreter of his day would; his methods have parallels in the Dead Sea Scrolls, the *rabbis and especially the Hellenistic Jewish philosopher-interpreter Philo. His arguments sometimes confuse or fail to persuade modern readers, but he is making a case first of all for his original readers, who would be accustomed to the kinds of arguments he makes. Given the forms of argumentation he must use to persuade readers in his own cultural context, he argues his case brilliantly, although some of the arguments would have to be restructured to carry the same conviction in our culture. Because the writer's arguments are often complex, this volume's comments on Hebrews are necessarily more detailed than the comments on many other New Testament books.

Commentaries. Commentaries useful for background include William Lane, *Hebrews,* WBC 47 (Waco, TX: Word, 1991); Harold W. Attridge, *The Epistle to the Hebrews,* Hermeneia (Philadelphia: Fortress, 1989); F. F. Bruce, *The Epistle to the Hebrews,* rev. ed., NICNT (Grand Rapids: Eerdmans, 1990); David A. deSilva, *Perseverance in Gratitude: A Socio-Rhetorical Commentary on the Epistle "to the Hebrews"* (Grand Rapids: Eerdmans, 2000); James W. Thompson, *Hebrews,* Paideia (Grand Rapids: Baker Academic, 2008). On a less technical level, see, e.g., D. A. Hagner, *Hebrews,* NIBC (Grand Rapids: Baker, 1990); Victor C. Pfitzner, *Hebrews,* ANTC (Nashville: Abingdon, 1997).

1:1-14
Christ Greater Than the Angels

Christ's superiority to the angels made him greater than the *law, which was said to have been mediated by angels (2:2-3). The writer may also offer this comparison to argue against toning down Christ's divinity to mere angelic status, a position the readers may have been allowing to appease non-Christian Jewish critics.

1:1-2. These two verses represent some of the most articulate, Atticizing Greek prose in the New Testament and include literary devices such as alliteration (five Greek words beginning with *p* in v. 1). The author also appears to model some of his language on the opening of the prologue to Sirach, a Jewish wisdom book in wide circulation by this period and almost certainly familiar to his readers (also called Ecclesiasticus and available to modern readers in what is usually called the *Apocrypha).

*Christ is probably presented here as the ultimate Word of God; ancient Judaism identified God's Word with his Wisdom (cf. Sirach 24:1, 23; Baruch 3:28–4:1). That God had created all things through Wisdom or his Word was noted in the *Old Testament (e.g., Prov 8:30; Ps 33:6, alluding to Gen 1) and developed further in Judaism. As the fullness of the Word, Christ was superior to the authentic but partial revelation of God in the law.

"Last days" was Old Testament language for the time of the end (Is 2:2; Ezek 38:16; Hos 3:5; Mic 4:1; cf. Deut 4:30, 32; 8:16), now inaugurated in Christ. An "heir" held title to the property of the one who appointed him heir; cf. comment on "inherit" in verse 4.

1:3. The term for his "brightness" appears elsewhere in the *New Testament or *Septuagint only at Wisdom of Solomon 7:26, describing Wisdom as reflecting God's light, a mirror revealing his image (the term applies to the Logos in *Philo, *Creation* 146). Jewish authors writing in Greek sometimes said that divine Wisdom was the exact "image" (so KJV here) of God, the prototypical stamp by which he "imprinted" (cf. NRSV here) the seal of his image on the rest of creation (the way an image was stamped on coins). Sitting down at the right hand of the supreme king was an image of the ultimate honor and alludes to Psalm 110:1, cited explicitly in Hebrews 1:13. "Purification" of sins was the work of priests; mention of it here anticipates a theme that appears later in the book.

1:4. Some *Diaspora Jewish writers attributed to the angels a role in creation, but early Christian writers routinely denied them such a role (Col 1:16), as did many Judean teachers. Here Jesus' exaltation grants him a title that entitles him to much more status than the angels: Son (1:5). (Although some Jewish teachers said that God honored Israel more than the angels by giving Israel the law, something greater than comparison with Israel is in view here, because Jesus himself is identified with the divine Word in 1:1-3, and is "son" in a sense in which the angels are not; the title is applied to angels generally [e.g., Job 1:6], but Jesus is distinguished as *the* Son. Those original hearers who wished to compromise their divine view of Jesus but to retain him as superhuman may also have wished to identify him as an angel, as some second-century Jewish Christians did, but if this is the case, the writer rejects this compromise as inadequate—2:5-18.)

1:5. The author cites Psalm 2:7 and 2 Samuel 7:14, contexts that had already been linked in speculations about the coming *Messiah (4Q174 f1 2i11, 18-19 in the *Dead Sea Scrolls). Jewish interpreters often linked texts on the basis of a common key word; the word here is "Son." Like several other messianic texts, Psalm 2 originally celebrated the promise to the Davidic line in 2 Samuel 7; the "begetting" referred to the royal coronation—in Jesus' case, his exaltation (cf. similarly Acts 13:33). The repetition of this verse's *rhetorical question in verse 13 suggests an *inclusio,* or framing device, that brackets off verses 5-14 as a united thought (though Diaspora Jews often introduced quotations from Scripture with rhetorical questions).

1:6. "Firstborn" specified further the inheritance rights of the oldest son, who received double the portion of any subsequent son (Deut 21:17); it is a title of the Davidic king of Psalm 89:26-27. To Jesus' coronation as king and consequent superiority to the angels the author applies a text from the Septuagint of Deuteronomy 32, a favorite mine for texts among early Christian writers and a text Diaspora Jews used

for worship alongside the Psalms. (Although these words are not in the Hebrew manuscripts preserved in the later Masoretic text, their presence in a *Qumran Hebrew copy of Deuteronomy shows that the line was in some Hebrew manuscripts, from which the Greek translation may have derived it.)

The author might read the text according to Jewish interpretive practice: attending to grammatical details, he might distinguish "God" from "him." (Some of his hearers might have also recalled a Jewish tradition in which God ordered his angels to honor Adam at his creation, because he was God's image.)

1:7. Although Psalm 104:4 could mean that God uses winds and fire as his messengers, Jewish writers in the first century commonly took the text the other way and often thus suggested that angels were made of fire (for angels and fire, cf., e.g., **1 Enoch* 17:1; *2 Enoch* 1a5 [Rec. A]; 20:1; 29:3 [Rec. A]; **3 Enoch* 47:4; **4 Ezra* 8:22). (This notion also fit some Greek speculations about the elements. For many, the soul was made of fire—like the stars—or breath; for *Stoics, the whole world would be resolved back into the primordial fire from which it had come.) The writer's point is simply that angels are subordinate to God in character, in contrast to the Son (1:8).

1:8-9. Psalm 45 may have been composed for a royal wedding celebration, but part of it speaks of God's blessing on the king and probably (certainly in the Greek version cited here) addresses God directly. Jewish interpreters read as much literal significance into a passage as they could, hence the writer of Hebrews invites his fellow Jewish-Christian readers to recognize the plain language of this psalm. Because God is addressed in Psalm 45:6 (cited in Heb 1:8), it is natural to assume that he continues to be addressed in Psalm 45:7 (cited in Heb 1:9). (Later *rabbis applied this text to Abraham, and a later *targum applied an earlier verse to the Messiah; but probably neither tradition was known to the writer of Hebrews, and the former one may have represented anti-Christian polemic.) But Psalm 45:7 distinguishes this God from a God he worships, so that one may distinguish God the Father from God the Son. The writer of Hebrews explicitly affirms Christ's deity in this passage.

1:10-12. Both Jewish and Greek writers sometimes separated quotations with "And he said" or "and." Interpreters often linked texts by means of a common key word or concept, and the writer cites Psalm 102:25-27 on the basis of God's throne being "forever" in Hebrews 1:8 (in context this Old Testament passage also promised God's faithfulness to his covenant people, even though individuals were mortal).

1:13. It is natural for the author to cite Psalm 110:1 because God's "right hand" is envisioned in terms of a place beside his throne (1:8; cf. possibly Wisdom of Solomon 9:4; 18:15). The full citation also includes God addressing the priest-king (see comment on Heb 5:6) as Lord, similar to the citation in 1:8-9. The writer shows himself a master of Jewish exegetical technique.

1:14. He already proved to his readers that angels were "ministering spirits" in 1:7. That they minister not only on behalf of the one who inherited a greater name (1:4) but also for those who inherit salvation (v. 14) would resonate with Jewish readers, who would be familiar with the concept of guardian angels assigned to the righteous by God (e.g., Tobit 5:22; *Pseudo-Philo, *Biblical Antiquities* 59:4; Tosefta *Avodah Zarah* 1:17).

2:1-4
Rejecting Christ's Word

According to common Jewish thought, any Israelite who willfully rejected the *law was excluded from the world to come; according to some teachers, this sin was even unpardonable. In Judaism, deliberate acts always carried more liability than inadvertent ones.

In a widely recognized Jewish tradition, God had given his law through angels (Acts 7:53; Gal 3:19; *Josephus, *Jewish Antiquities* 15.136; and *Jubilees 1:27). (The rabbis preferred to emphasize Moses's mediation and the great number of angels present for the Israelites.) The tradition may have some basis in the interchange between God and his angel in Exodus (cf. Ex 3:2), the association of Psalm 68:17 with the Sinai tradition, and especially Deuteronomy 33:2 (more so in the *LXX, which declares that his angels were with him on his right).

Because *Christ is greater than the angels

(Heb 1:1-14), rejecting his word is a more serious offense than rejecting the word said to have been mediated through the angels (2:2). This is a natural Jewish *qal vahomer,* or "how much more" argument: if the lesser point applies, then how much more does the greater point apply. Some scholars have suggested a nautical image (a drifting ship) in verse 1, as well as significant juridical language in verses 2-4.

2:5-18
Christ Human, Not an Angel

Recognizing Jesus as suprahuman but not wishing to offend their Jewish colleagues who protested that God's oneness disallowed Jesus' divinity, some second-century Jewish Christians portrayed Jesus as a chief angel. The temptation to such a path was probably already present among the audience of this letter (see comment on Gal 1:8; 4:14), so the writer warns forcefully against such a view. *Christ was divine and became human as well; but he was never an angel.

2:5. The *Old Testament and Jewish teaching declared that God's people would reign with him in the world to come, just as Adam and Eve had been designed to reign for him in the beginning. The writer proceeds to prove this point by appealing to a specific Old Testament text, Psalm 8:4-6, in Jewish *midrashic style.

2:6-7. "One has testified somewhere" (NASB) does not mean that the writer has forgotten what part of Scripture he is quoting; this was a way of expressing confidence that the important issue was that God had inspired the words. *Philo used similar phrases in this manner. The writer can introduce Psalm 8:4-6 naturally on the basis of the Jewish interpretive rule, *gezerah shavah,* the principle by which one was permitted to link key words or phrases. This text speaks of everything subdued under someone's feet, as had the text he had cited most recently (1:13).

Psalm 8:4-6 declares that although humanity is nothing in itself, God appointed humans as rulers over all his creation, second only to himself (alluding to Gen 1:26-27). The *Septuagint interprets this passage as "a little lower than the angels" instead of "a little lower than God" (the Hebrew word used there, *'elohim,* sometimes did mean angels instead of God). That angels were more powerful than people in this age was true, but the writer of Hebrews is going to make a different point. In the verses that follow, he expounds the version of this passage with which his readers are familiar in traditional Jewish interpretive style. ("*Son of Man" was simply a Semitic way of saying "human being," and the writer here does not seem to try to get more out of it than this, although he could have had he wished to do so, because he applies the whole text to Jesus. Some scholars have also connected this passage with the binding of Isaac, the tradition known as the *Aqedah,* but the evidence cited may be too sparse and late for the points of contact here.)

2:8. Jewish interpreters often established that a text could not mean what it seemed to mean on face value (or could not mean only that) before proceeding to argue what they believed that it did mean. Here, because the creation is not currently subject to humanity, the author can argue that God's original intention in Adam will be fulfilled again for all the righteous only in the *age to come (2:5)—a doctrine shared with the rest of Judaism. But he can also argue that one representative man has already gone ahead for all humanity, as a sort of new Adam (2:9).

2:9. In Jewish thought, angels ruled the nations in this age. Jesus had obviously been made lower than God and the angels, but after death he was crowned with glory (1:13); therefore this text was not only true of the past Adam and God's people in the future but also had been fulfilled in Jesus. (The author may read "a little lower" as "for a little while lower," which was an acceptable way to read the *LXX of Ps 8; he also distinguishes "a little lower" from "crowned with honor," though the lines are parallel in Hebrew. Ancient Jewish interpreters generally read passages whatever way fit best with their views.)

2:10. That Christ had been made lower but then exalted shows him as the forerunner of the righteous who would inherit the coming world (1:14; 2:5). The term *archegos,* translated "pioneer" (NIV) or "captain" (KJV), means "pioneer" (NRSV), "leader" (cf. GNT), "founder" or "champion." The term was used for both human

and divine heroes, founders of schools or those who cut a path forward for their followers and whose exploits for humanity were rewarded by exaltation. "For whom . . . and through whom are all things" was a phrase *Stoics used to describe the supreme God, but the idea fit Jewish thought about God and divine Wisdom and was widely used by *Diaspora Jewish writers, including Paul (1 Cor 8:6). The Septuagint uses the author's term for "perfect" for the consecration of a priest; some contemporary Jewish texts also speak of a righteous person's life crowned with martyrdom as being "perfected" thereby.

2:11. Again the idea is that the text has been fulfilled in Jesus, who has gone on ahead, but will yet be fulfilled in the rest of the righteous; he is the "firstborn" (1:6) among many brothers.

2:12. To prove the thesis of verse 11, the writer cites Psalm 22:22, which can be applied to Jesus the one who suffered because it is a psalm of the righteous sufferer (the Gospels apply some of its verses to Jesus' crucifixion).

2:13. Here the author cites Isaiah 8:17-18. Isaiah 8:17 refers to the Lord who was a sanctuary to the righteous and a stumbling block to the rest of Israel (8:14-15), a text that, when linked with other "stone" texts by the Jewish interpretive principle *gezerah shavah* (linking of texts with the same key word, e.g., Is 28:16; Ps 118:22), could apply to the *Messiah. In Isaiah 8:18 the prophet explains that his own children have symbolic names to signify things to Israel. The writer can cite it because it immediately follows 8:17 and perhaps because its wording matches his point (see comment on Heb 2:12). He may also make the link, however, because one of Isaiah's children pointed toward Immanuel, God with us (Is 7:14-16; 8:1-4; cf. 9:6-7), and this text declared the other children brothers.

2:14-15. Jesus had to become part of humanity, as in Psalm 8:4-6, to become a forerunner, a new Adam for humanity. Ancient literature often spoke of the terrors of death, although many philosophers claimed to transcend this fear. Jewish literature had already connected the devil and death, especially in the Wisdom of Solomon (which this author and his audience probably knew well; here Wisdom of Solomon 2:23-24); some later texts even identify *Satan with the angel of death. Like Heracles in the Greek tradition and perhaps God the divine warrior of Jewish tradition (cf. Is 26:19-21; 44:24-26), Jesus is the "champion" (see comment on Heb 2:10) who has delivered his people.

2:16. Still expounding Psalm 8:4-6, the writer reminds his readers that Christ acted as forerunner for the world to come for God's people ("Abraham's seed"; cf. perhaps Is 41:8-9), not for the angels. (The Old Testament called Abraham's chosen descendants "children of God"—e.g., Deut 32:19; Hos 11:1; the writer is addressing Jewish Christians, members of a people who have long believed that a great destiny awaits them in the future.) Christ is already exalted above the angels (2:7, 9), as his people will be in the age to come (2:5).

2:17-18. The writer here gives a reason for Christ's becoming human to redeem humanity: identification of the sort that had to characterize a *high priest (see comment on 5:1-3). Such an image might have intrigued many people of antiquity, whose agendas were generally low on the aristocracy's list of priorities; in the cities, the aristocracies merely kept them pacified with gifts of free food, public games and so forth. On "faithful," see comment on 3:2 and 5.

3:1-6
Christ Greater Than Moses

3:1. The mention of a "heavenly" calling would have appealed to philosophically minded Jewish thinkers like Philo, who regarded earthly reality as only a shadow of heavenly reality. The writer of Hebrews probably presents Jesus as superior to Moses, who was *not* a *high priest. (*Samaritan writers saw Moses as an "*apostle," and some Jewish writers saw the high priest as such, although rarely. The author of Hebrews sees Jesus as an "apostle," a commissioned messenger of the Father, in a way greater than Moses or an earthly high priest [for a commissioned "agent," see "apostle" in the glossary]. *Philo regarded Moses as a high priest of sorts, but the *Old Testament and most of Judaism recognized that Aaron filled that role, and the writer of Hebrews probably assumes only the Old Testament perspective on the part of his readers.)

3:2. In verses 2-6 the writer constructs an implicit *midrash on Numbers 12:7-8, ex-

pounding the familiar text without directly citing it (cf. also 1 Chron 17:14 LXX). In this passage, God honors Moses above Aaron and Miriam, claiming him to be greater than a normal prophet and noting that "he is faithful in all my household." Jesus is thus this special kind of prophet "like Moses," of whom there were no others (Deut 18:15-18).

3:3-4. Comparison (*synkrisis*) was central to much ancient argumentation; comparing one favorably with another who was already honorable would increase one's honor further. In many Jewish traditions Moses was the greatest person in history, and in others he was certainly one of the greatest (i.e., next to Abraham). Jewish and Christian writers used the argument that the builder was greater than what was made (v. 3) to note that the Creator was greater than his creation (as in v. 4). This writer identifies Jesus as the Creator. Ancient writers often developed arguments based on wordplays; this writer plays on two senses of "house": God's "household" (3:2) and a building (3:3-4).

3:5. Past symbols could testify to future realities in Jewish *apocalyptic literature, the way that earthly "shadows" testified to heavenly realities in writings by Philo and Jews influenced by Platonism. Jewish readers may have recalled the tradition that Moses foresaw and testified of the messianic era (on his special visionary abilities see Num 12:8). A first-century reader could understand Numbers 12:7 the way later *rabbis also did: God was owner of the house, but Moses was the manager of the estate, and like many managers, was a servant.

3:6. A firstborn son was naturally heir and lord over the house, acting on his father's authority while the father lived and becoming master when his father died. In the Old Testament, God's household was Israel; here it is the faithful remnant, those who have submitted to God's truth in Christ.

3:7-19
Rejecting Christ Like Rejecting Moses

Here begins an explicit *midrash (commentary) on Psalm 95:7-11, which continues until 4:14, where the midrash on Psalm 110:4 begins. Like other Jewish writers, this author gives attention to the details of the text. Israel was to have "rest" in the Promised Land, but the writer points out that this means not only in this age—when the promise was never completely fulfilled (4:8)—but in its completion in the *age to come.

3:7. Ancient Judaism most often associated the "*Holy Spirit" with *prophecy, and later rabbis and some others particularly associated this prophetic Spirit with the inspiration of Scripture (among other activities; e.g., *Dead Sea Scrolls 1QS 8:16; **4 Ezra* 14:22).

3:8-11. The author cites Psalm 95:7-11, a text that later became familiar through its regular use in the *synagogue liturgy, but that would have been already known to most first-century Jews who recited the Psalms. This psalm refers to Israel's rebellion in the wilderness and calls on its hearers not to be like their ancestors. Later Jewish teachers debated whether the wilderness generation might have inherited the life of the world to come, even though they did not enter the Promised Land (Tosefta *Sanhedrin* 13:10-11); these rabbis believed that God's people could *atone for their sins in this age by suffering. But the psalmist's words seem like firmer rejection, without ethnicity offering the privilege of salvation; the writer of Hebrews thus contends with good reason that they did not enter the world to come.

3:12-13. Like many ancient Jewish interpreters, the writer points out that the psalmist's exhortation for "today" was still valid in his own generation.

3:14-15. The psalm states that God's people could be cut off from the covenant if they refused to heed it; thus the writer warns his readers that they become sharers in Christ's *kingdom (2:5-16) only if they persevere to the end.

3:16-19. Following Greek argumentative practice, the writer produces a series of *rhetorical questions and their obvious answers, reinforcing his point.

4:1-13
Only the Obedient Enter His Promise

4:1-2. The Israelites rebelled in the wilderness because they did not believe the word Moses gave them; those who rebelled against the

word of *Christ were acting like Moses' generation had.

4:3-5. The writer now attends to grammatical details as Jewish interpreters in his day normally did. What could the psalmist mean by "my rest," since God had already rested from his works on the seventh day of creation? (Linking texts by a shared key word was a common Jewish exegetical technique; Jewish liturgy later linked these two texts similarly.) Perhaps he uses this text to point to the future too; some Jewish writers (cf., e.g., *Mekilta Shabbata* 1) believed that the world to come would be the ultimate sabbath rest, the final stage of creation.

4:6-7. All of Moses' generation failed to achieve "rest" (3:16-19), settlement in the land. Indeed, all subsequent generations from Joshua on, with the notable near-exceptions of David and Josiah, failed to subdue all the land promised to Abraham. Thus the psalmist (Ps 95:7-8) could warn his own and subsequent generations to obey God's word or the same thing would happen to them. (By the *New Testament period, with Judea under Rome's authority and no end of the Roman Empire in sight, most Jewish people agreed that the restoration of their *kingdom and consequently rest in the land would come only in the end time, which most hoped was soon.)

4:8-9. "Joshua" and "Jesus" are the same name (these are anglicized forms of the Hebrew and Greek, respectively); perhaps the writer thus intends the first Joshua to point to his later namesake. But his main point is that Joshua was not able to subdue the whole land (4:6-7; Josh 13:1-2); the promise is thus yet to be fulfilled.

4:10-11. Because the *Messiah, the *Spirit and other events that had arrived in Jesus were normally relegated in Judaism to the *age to come, early Christian writers could say that believers in Jesus experienced a foretaste of the future world in their present relationship with God (see comment on 6:5).

4:12-13. God's word, received by Israel through Moses and by the readers of Hebrews in Christ (4:2), left those who heard it no excuses. Judaism recognized the ability of God to search out every detail of one's heart and thoughts (e.g., Ps 139:23), and it was natural to apply this property to his word or wisdom.

The Alexandrian Jewish philosopher *Philo spoke of the power of the universal, divine "Word" (the Logos, divine reason that permeated the universe) to subdivide the soul into smaller and smaller units, especially into its rational and irrational components; but he sometimes identified spirit and soul, as the New Testament writers usually do. The point here is not an analysis of human nature, but that the Word searches the heart in such detail that it is like a sharp sword that divides even what is virtually (but not absolutely) indivisible, whether soul and spirit or joints and marrow.

4:14–5:10
Christ the High Priest

Although *Philo portrays the Logos, the divine Word or reason, as God's *high priest, this is probably not in the mind of the author of Hebrews. (Indeed, the emphasis on Christ's participation in people's humanity contrasts with Philo's attempt to circumvent the high priest's full humanity when he interceded for Israel.) Instead, a more obvious source lies at hand: his interpretation of Psalm 110:4, which becomes explicit in Hebrews 5:6. His citation of the first verse of this psalm in 1:13, applied by Jesus to himself (Mk 12:35-37), may have already called Psalm 110:4 to his biblically informed readers' minds.

4:14. See Psalm 110:4, cited in Hebrews 5:6. *Apocalyptic traditions portray heaven as a place of worship; the imagery of a heavenly temple is especially prominent in the book of Revelation. In later *Samaritan tradition, Moses (who in some Jewish tradition had ascended to heaven to receive the *law) served as heavenly high priest; but the Christian portrait of Jesus fulfilling this role is probably earlier than the Samaritan tradition about Moses.

4:15. The writer continues the theme that *Christ had experienced humanness without compromising his obedience (2:14-18). In the unlikely event that his readers were familiar with the abuses of the high priesthood in Jerusalem, they might have recognized here a contrast with the high priestly aristocracy.

4:16. The ark of the covenant symbolized God's throne in the *Old Testament (e.g., 2 Sam 6:2; Ps 80:1; 99:1; Is 37:16; cf. Ps 22:3) and in the ancient Near East (where kings or deities were often portrayed as enthroned on winged

figures). But the ark was unapproachable, secluded in the most holy part of the temple, which even the high priest could approach only once a year. Christ has opened full access to God to all his followers (10:19-20).

5:1-3. While continuing the theme of 4:15-16, the author also shows Christ's superiority over other *high priests, who sin (Lev 9:7; 16:6).

5:4. The writer follows the Old Testament law on the high priestly succession; in Palestine in his own day, the office of high priest was a political favor granted by the Romans. Outside Judea, however, this was not an issue; the writer speaks of the system God had appointed in the Bible.

5:5. Citing again Psalm 2:7 (see comment on Heb 1:5), the writer proves from it that Christ's royal coronation was God's initiative. In the next verse he links this kingship with the high priesthood.

5:6. Although the Romans had a powerful high priest too (the *pontifex maximus*), the writer's model for this high priesthood and all its nuances derive unquestionably from the Old Testament and Jewish tradition. Melchizedek was a Canaanite priest-king (Gen 14:18); to speak of a "priest like Melchizedek" was thus to speak first of all of a priest who was also king. Israel had known a dynasty of priest-kings only in Hasmonean times, after they threw off the Syrian yoke and before they were subdued by Rome; some Jews opposed this combination. The *Dead Sea Scrolls came to separate the anointed high priest from the anointed king *Messiah, which was a necessary distinction so long as one was from Levi and the other from Judah (cf. 7:14). But Melchizedek was not Levitical; one like him would be a priest-king without being descended from the Jewish priestly line.

Rabbis later contended that Psalm 110:4 meant that God transferred Melchizedek's priesthood from Melchizedek to Abraham; they may have argued this point to counteract Christian claims that it referred to Jesus. Melchizedek appears in some other Jewish traditions (in the 11Q13 Dead Sea Scrolls) as a heavenly figure, perhaps Michael, and is sometimes associated in Jewish literature with the end time. The writer does not appeal to this extrabiblical tradition, however, which could play into the hands of those wishing to reduce Christ to angelic status (Heb 2:5-18); the plain statement of Psalm 110:4 is sufficient for his case.

5:7. Judaism stressed that God heard the pious; God answered Jesus' prayers by the *resurrection, however, not by escape from death. Although the writer's source here could be Psalm 22:5 and 24, it is more likely that he and his readers are acquainted with the tradition of Jesus' struggle and commitment in Gethsemane (Mk 14:36, 39).

5:8-10. Discipline, including beatings, was a standard part of most Greek education. Classical Greek writers stressed learning through suffering, and the Old Testament and later Jewish wisdom traditions portray divine chastisement as a sign of God's love. The Greek paronomasia here, *emathen aph' hon epathen* "learned from the things he suffered," was already a common play on words in ancient literature. But the writer here challenges the Greek philosophic idea that the supreme God (with whom the writer in some sense identifies the Son—1:9; 3:3-4) was incapable of feeling, pain or true sympathy. Jesus' participation in human suffering qualified him to be the ultimate high priest; the *Septuagint applies the word used here for "made perfect" to the consecration of priests (v. 9).

5:11–6:12
Press Deeper or Fall Away

The writer complains that his readers' knowledge of the Bible is inadequate to follow the rest of his argument. But he insists that they must become more biblically informed if they wish to persevere—and he proceeds to give them the rest of his argument anyway (6:13–7:28).

5:11-12. Many Greek writers used "much to say" to indicate how important their topic was. Even philosophers agreed that one must begin with simple matters before leading students to the more difficult; but they were not above complaining about their pupils' slowness to learn. Greek moralists also used "milk" and "solid food" figuratively, contrasting basic and advanced instruction. The "elementary principles" (NASB) or "elementary truths" (NIV) are the rudiments or basics (summarized in 6:1-2); Greek writers often applied the term to the alphabet. Some writers frequently reproved

their readers in similar ways ("You should be teachers by now!") to stir them to learn what they should already know.

5:13. Some philosophers, such as Pythagoras, distinguished between elementary and advanced students, calling them "babes" (NASB, KJV) and "mature" (cf. v. 14; "perfect"—KJV) respectively.

5:14. Whereas Platonists disparaged mere sensory knowledge and Skeptics (another philosophical school) valued it even less, *Stoics believed that one's senses (of which there were five, as in *Aristotle) were useful, and *Epicureans in particular trusted them. Those who thought the senses at all reliable, like *Seneca and Philo, wanted them trained for moral sensibility. The ability to differentiate critically between good and bad, i.e., between truth and falsehood, was important to Greco-Roman writers in general, although the specific application to moral sensibilities is more often Jewish (2 Sam 14:17; 1 Kings 3:9; Ezek 44:23). The writer borrows the language of Greek ethics, which would impress his *Diaspora Jewish readers, and uses it to call them to study the Bible more thoroughly.

6:1. They had to get past the basics to biblical maturity (5:11-14), or they would fall away (6:4-8). The writer probably chooses these items as the "basics" because they were the basic sort of instructions about Jewish belief given to converts to Judaism, which all the author's readers would have understood before becoming followers of Jesus. These items represented Jewish teachings still useful for followers of Christ. Judaism stressed *repentance as a regular antidote for sin, and a once-for-all kind of repentance for the turning of pagans to Judaism; Judaism naturally stressed faith as well. Although "dead" works could echo the common Jewish denunciation of idols as dead, that specific an allusion is unlikely in this context; cf. 9:14.

6:2-3. "*Baptisms" probably refers to the various kinds of ceremonial washings in Judaism, of which the most relevant to Christianity was *proselyte baptism as an act of conversion washing away the former impurity of a pagan life. Jewish worshipers laid hands on certain sacrifices, and Jewish teachers laid hands on *disciples to ordain them; the latter was more relevant to Christian practice. The *resurrection of the dead and eternal judgment were standard Jewish doctrines, though embarrassing to some Hellenized elements in Judaism.

6:4. Early Judaism severely limited possession of the *Spirit. The *Dead Sea Scrolls limit the activity of the Holy Spirit to the congregation of the children of light, that is, those who agree with them; but besides these and Christian texts, others viewed the Spirit as even rarer. Later *rabbis most emphasized the Spirit's rareness; they generally report that the Spirit was so rare that even when someone was worthy to receive it, the unworthiness of his generation prevented him from doing so.

"Illumined" or "enlightened" clearly means converted, as in 10:32; the Dead Sea Scrolls similarly speak of their teachers as the "illuminators" and their adherents as "children of light." "Tasted" also normally meant "experienced" (2:9), and both the use of "heavenly" in the letter (cf. 3:1; 8:1-5) and the limitation of the *Holy Spirit to Christians in early Christian literature also indicate that this person was genuinely converted.

6:5. Most of Judaism regarded the present age as under sin, but believed that God would rule the coming age unchallenged, after he raised the dead and judged them. Christians recognized that they had begun to experience the life of the future world; they were the vanguard of the future *kingdom (see comment on 4:10-11). On the "word," see comment on 4:2 and 12.

6:6. God had a higher standard for those who should have known better (Num 14:22-23). Judaism generally believed that some people could rebel against God so brazenly, aware that they were doing so, that they would become unable to repent; the offense had to be extremely serious, however. (Later rabbis were not unanimous; Rabbi Meir is said to have insisted that the notorious apostate Elisha ben Abuya could repent, for example. But the majority opinion seems to have been that some could go too far, including King Manasseh. The Dead Sea Scrolls also attest that one who had been part of the community for ten years—and thus knew full well what he was doing—and then turned away was never allowed to return. But as some writers have pointed out, this verse refers to intentional apostasy, not a

single sin or drifting away that can be addressed by repentance; drifting away may be covered under Jas 5:19-20.) The point here is not that God does not accept the repentant, but that some hearts become too hard to consider repenting, because they refuse to acknowledge Christ, the only means of repentance. By willfully choosing the kind of belief that nailed Jesus to the cross, they accept responsibility again for killing him.

6:7-8. Others had also used ground choked with thorns and thistles as an image for the wicked and their spiritual destination in barrenness and death (e.g., Is 5:6). Judaism treated apostates as spiritually dead, as did *Pythagoreans and some other groups.

6:9. Greco-Roman moralists often presented their exhortations as reminders, thereby toning down the possible harshness of their words and making them more palatable: "We know, of course, that *you* would never do something like that." When they did think that their readers were likely to pursue such a course, however, they would state matters more harshly, rebuking them. The writer has some reason for confidence in his hearers, stated in 6:10.

6:10. "Ministry to the *saints" (KJV, NASB) probably refers to financial help. Some suggest that it might refer to a continuing effort to help the poor Jerusalem Christians that Paul had initiated (Rom 15:25); by A.D. 68, however, with Jerusalem surrounded and the Christians having escaped safely to the wilderness, such monies would have to be sent elsewhere, even if in Judea. On charity see, for example, comment on Matthew 6:2-4.

6:11-12. Ancient moral exhortation often emphasized imitating positive role models (some of whom this writer will list in chap. 11). As Israel "inherited" the land, so Judaism said that the righteous would "inherit" the world to come.

6:13-20
The Unbreakable Oath to Jesus

The writer compares the promise (continuing the theme of 6:12) God made to Abraham with the promise he had made to one who would be *high priest after the order of Melchizedek. Although he does not quote here Psalm 110:4, which states this promise, he expects his readers to understand this point presupposed by his exposition (cf. Heb. 5:6; 6:20; 7:17, 21).

6:13-17. God swore this "by himself" (Gen 22:16; Ex 32:13), just like the promise to the one who would be high priest after the order of Melchizedek (Ps 110:4).

This oath is one of several by God in the *Old Testament. God had sworn an oath to David (Ps 89:35, 49; 132:11), which Jewish people expected to be fulfilled in the *Messiah; he swore to judge Israel for their sins, and he did so (Ps 106:26). But the greatest human oaths were oaths sworn "by God," and when God swore "by himself" his words were guaranteed, especially in the few instances where the oath included a promise not to change his mind (Ps 110:4; Is 45:23). God swore by himself and would not change his mind that everyone would have to acknowledge him in the day of judgment (Is 45:23); he likewise swore by himself judgment on the royal house of Judah (Jer 22:5), on the Jewish refugees in Egypt (Jer 44:26), on Israel (Amos 4:2; 6:8), on Edom (Jer 49:13) and on Babylon (Jer 51:14). (*Philo claimed that God alone was worthy to bear witness to his own veracity, although he also decided that any of God's words had the force of an oath, hence he had not literally sworn by himself.) The accumulation of standard legal terms in this context is not surprising, given the legal force and common courtroom use of oaths.

6:18. Although God swore more than these two promises, the writer emphasizes here the two he has just mentioned: the one to Abraham and the one to the priest like Melchizedek. Greek philosophers believed that the gods were immutable, unchangeable; most Jewish people believed that their God was absolute and unchangeable in his character, yet he dealt with human beings as they were (Ps 18:25-26). The oath is thus important, although both Jews and Greek philosophers believed that the one who was truly God (as opposed to the mythical antics of Greek gods) did not lie.

6:19. The "anchor" was a frequent metaphor in Greco-Roman literature, often for the secure hold on hope which moral qualities produced. "Inside the veil" means that believers have a secure hope in the "holy of holies" (cf. Lev 16:2), which only the high priest could enter once a year. (Later rabbinic

texts also portray God as "behind the veil," from which he utters his decrees. Although this parallel may illustrate that the readers of Hebrews would have caught the author's Jewish expression for God's presence in heaven, the Old Testament is his direct source.) The writer means not the earthly but the spiritual holy of holies, in the heavenly temple (see comment on 8:1-5).

6:20. Jesus appears as forerunner often in the book (compare the idea in 2:10; 5:9); the term could be applied to a military vanguard, to firstfruits, to the first-place runner and so forth. It always signifies that the rest of the company is coming afterward.

7:1-10
The Nature of Melchizedek's Priesthood

Because Scripture declares David's lord to be a priest like Melchizedek (Ps 110:4, in Heb 5:6), a Jewish interpreter would naturally ask, In what ways is he like Melchizedek? The writer's point is to show that Jesus' priesthood is greater than and so supersedes the Levitical priesthood of contemporary Judaism. Psalm 110 invites the reader to look for traits of the ultimate king in Genesis 14.

7:1. Here the author summarizes Genesis 14:17-24, in which the Canaanite priest-king of the city that later became Jerusalem blessed Abram. (The identification of Salem with Jerusalem is corroborated by Ps 76:2 and Egyptian execration texts, and assumed in *Josephus, the *Dead Sea Scrolls and the *rabbis.)

7:2. *Philo and others commonly interpreted *Old Testament names allegorically. Jews like Philo and Josephus also interpreted Melchizedek's name as the writer of Hebrews does (as *melek,* "king," plus *tsedeq,* "righteousness").

7:3. One Jewish interpretive principle (used when convenient) was that what was not mentioned did not happen. (Philo especially, though not exclusively—cf. the rabbis—exploited this technique. Thus, for instance, Philo argued that the wise man's family consisted of his virtues, because at one point Moses listed virtues instead of listing all ancestors. Similarly, because Cain's death is not mentioned, Cain did not die [for Philo, Cain represents deathless folly]. This technique of arguing from silence was applied selectively, of course, because *most* possible details were not mentioned in a text.) The writer of Hebrews can thus argue that Melchizedek, for the purpose of the comparison, was without parents, because Genesis 14 does not mention them, and Genesis supplies parentage and genealogy for other important representatives of God. To Greek readers, to be without beginning or end was to be divine (e.g., an argument by the philosopher Thales).

7:4. Tithing was already an ancient Near Eastern custom before it was mandated in the Old Testament, and a form of it is also attested in Greco-Roman literature. Here the author refers to Genesis 14:20, its first occurrence in the Bible.

7:5-6. Under Old Testament *law, the tithes went to the descendants of Levi, who was a descendant of Abraham (e.g., Num 18:26; 2 Chron 31:4-6; Neh 10:37-38; 13:5, 12); but Abraham tithed to someone else.

7:7-10. The writer's point is that Melchizedek (and thus the one who has inherited his priesthood—5:6) is greater than Abraham and thus greater than Levi, for Abraham is greater than Levi. Seeking to get around this argument, later rabbis said that God withdrew the priesthood from Melchizedek (for blessing Abram before blessing God) and gave it to Abraham in Psalm 110:4; but Psalm 110 clearly refers to the ultimate priest-king who would rule over the nations, not to Abraham. Like Philo, the writer of Hebrews believes that the perfect priest is eternal; but this writer can prove his case from Genesis 14 (or even better, from Ps 110 on Jewish premises about the future *Messiah and the *resurrection of the dead).

7:11-28
The New Priesthood Supersedes the Old

The writer of Hebrews had a difficult task. Although history was ultimately on his side—as the destruction of the temple not long after proved—he wanted all the Bible on his side too, and the Bible said that the Levitical priesthood was "perpetual" (e.g., Ex 40:15). Although some *narratives in Scripture could undermine a literal construal of that phrase (e.g., Ex 32:10), and one could interpret the old

priesthood allegorically (as some Jewish people in the writer's day did) or recognize eternal principles merely expressed in transitory, culturally relevant forms (as do many interpreters today), the writer of Hebrews had a more useful approach for his own audience. For him, the new and superior priesthood clearly promised in Scripture makes the old priesthood obsolete.

7:11-19. The *Dead Sea Scrolls eventually recognized two "anointed" figures: a warrior *messiah descended from David, hence of Judah, and an anointed priest from the tribe of Levi. But Psalm 110 allows this writer to view both roles as fulfilled by one future figure; a priest "like Melchizedek" need not be descended from Levi, and was, in fact, greater than Levi (7:4-10).

Philo spoke of the "perfection" of Levi as a model of the perfect priesthood; the author of Hebrews disagrees. Like *Plato and his successors, this writer notes that what changes is imperfect, for the perfect by nature does not need to change. Yet God had promised another priesthood, an eternal and hence changeless one (7:17; cf. 7:3), which renders the first, imperfect one obsolete. (The term for "setting aside" in v. 18 was even used in business documents for a legal annulment.)

7:20-21. This priesthood is also greater than the Levitical priesthood because, unlike the latter, it is guaranteed with a divine oath (see comment on 6:13-18). This point constitutes a partial answer for any possible appeal to the *Old Testament claim that the Levitical prescriptions were perpetual ordinances; God changed some points in the *law when such changes were necessary to accomplish his original, eternal purpose in the law (e.g., Jer 3:16; cf. 2 Kgs 18:4), but in this case he had sworn and promised not to change his mind.

7:22-25. On the eternal priest's superiority to temporal ones, see also 7:11-19. In the unlikely event that his readers are familiar with the politics of the Jerusalem aristocracy, they would think of the Romans' appointing and deposing of priests. More likely, however, the only issue here is the priests' mortality. The term for "guarantee" (NASB, GNT) or "surety" (KJV) in verse 22 was used in business documents for a deposit, a security guaranteeing that one would carry through on one's word or obligation, or someone who made such a guarantee.

7:26. Levitical priests were to avoid defilement, and special precautions were taken to avoid the *high priest's defilement before the Day of Atonement. This was the one day a year on which the high priest would enter the holy of holies (although he may have entered several times on that day; cf. Lev 16:13-16). Even though later rabbis' views may be stricter than the actual practice of the Jerusalem high priests, their elaborate care to avoid the high priest's defilement is instructive (he was secluded for the week preceding that day; precautions were taken to avoid a nocturnal emission the night before; etc.). But such earthly high priests could never compare with the heavenly high priest, just as the earthly tabernacle was only a shadow of the perfect one in heaven (see comment on 3:1; 8:1-5).

7:27. High priests did not directly offer up the daily offerings, but they were responsible for the priestly service that did offer them. Fire was to burn on the altar continually; Israel's sacrifices were offered day after day; priests offered daily morning and evening sacrifices on behalf of the whole nation in the temple. The writer may be conflating the duties of the whole priesthood with the duties of the high priest on the Day of Atonement, thus stressing the necessity of repetition in the Levitical cultus. Or he might mean "daily" hyperbolically for "continually," year after year. Under the law, only on the Day of Atonement did the high priest make an offering for his sins and then for those of the nation (Lev 16:6, 11, 15-16).

7:28. By Jesus' *resurrection he naturally qualifies for the "eternal" priesthood like Melchizedek in Psalm 110:4 (Heb 7:17). Many ancient thinkers accepted only what was eternal as "perfect." (The writer cites the promise given after the law, hence a statement that the law could not supersede. Addressing a different line of reasoning in Gal 3, Paul speaks of a promise that came *before* the law and that the law cannot annul. Thus Paul and the author of Hebrews assert promise over law from different directions.)

8:1-5
The Heavenly Tabernacle

Parallels between the heavenly and earthly

were common in some Jewish sources (e.g., the heavenly and earthly court or Sanhedrin), as elsewhere in ancient thought (e.g., the heavenly temple corresponding to the Babylonian temple of Marduk, called Esagila, and the Canaanite temple of Baal). (Some ancient Near Eastern temples and later *Mithraea* were also designed to reflect the structure of the whole cosmos, signifying the deity's universal rule. *Philo naturally applied the principle of heavenly prototype and earthly copy even more broadly, following Platonic models. When specifically comparing the heavenly and earthly temples, Philo allegorized in great detail, regarding the ideal heavenly temple as virtue, its altar as ideas, its linen as earth, etc.) Given the ancient Middle Eastern setting, correspondences between heavenly and earthly temples were probably intended even in Exodus 25:8-9, part of which is cited in Hebrews 8:5.

Much of Judaism, from Hellenized wisdom traditions (Wisdom of Solomon 9:8) to *apocalyptic visionaries and writers and later *rabbis, spoke of the earthly temple as an imitation of the heavenly one. The eternality and value of the old temple are relativized by comparing it with the true temple in heaven.

8:1. Jesus' seat at God's right hand was proved by Psalm 110:1 (Heb 1:13), which clearly addressed the same person as the priest like Melchizedek (Ps 110:4, cited in Heb 5:6; 7:17).

8:2-5. See on the introduction to 8:1-5. Like followers of *Plato (including, on this point, Philo), the writer of Hebrews sees the earthly as a "copy and shadow" of the heavenly reality (8:5). (The word for "copy" means "sketch" [NRSV] or "plan, outline," as in the *LXX of Ezek 42:15, which deals with the temple of the world to come; many of its details the author of Hebrews might interpret symbolically, an approach not necessarily out of harmony with the symbolic language of Ezekiel elsewhere, e.g., 31:2-9.) Unlike Plato, the writer of Hebrews does not see the heavenly reality only as an ideal world to be apprehended by the mind: Jesus really went there. Jewish apocalyptic writers sometimes also spoke of the future *kingdom (which generally included a magnificent temple) as a present reality (at least as a prototype) in heaven.

8:6-13
The New Covenant

The writer produces here an extended citation from Jeremiah 31:31-34 to demonstrate his case that the Bible itself predicted a change in the *law. This text was also stressed by the *Qumran sectarians who probably wrote the *Dead Sea Scrolls; they saw themselves as the people of this "new covenant." But they interpreted Moses' law more strictly, whereas this writer would have been considered a more liberal Jew on this point than Philo was (13:9), valuing the principles as eternal but the forms as cultural and temporary.

8:6-7. The author picks up a hint he dropped in 7:12: the old priesthood was tied with the old law and its covenant, and both were shown to be imperfect if they were superseded.

8:8-9. The phrase generally rendered "new" covenant in Jeremiah 31:31 could also be translated "renewed" covenant. The first covenant was meant to be written on people's hearts (Deut 30:11-14), and the righteous actually had it there (Ps 37:31; 40:8; 119:11; Is 51:7); but according to Jeremiah, most of Israel did *not* have it in their hearts (cf., e.g., Deut 5:29). The difference between the former and the new covenant would be precisely that whereas the Israelites broke the first covenant (Jer 31:32), the new law would be written within them, and they would know God (Jer 31:33-34).

8:10-12. Jeremiah echoes the language of the first covenant: "I will be their God, and they will be my people" (e.g., Lev 26:12). "Knowing" God was also covenant language, but on a personal level it referred to the sort of intimate relationship with God that the prophets had.

8:13. The writer undoubtedly says "about to disappear" because the temple service had not been directly discontinued by Jesus' exaltation, but it was at that time on the verge of disappearing. If, as appears likely, this letter was written in the late 60s A.D. (see introduction), many in the *Diaspora recognized that the Romans might soon crush Jerusalem and the temple. Apart from a few groups not very dependent on the Jerusalem temple (such as the *Essenes), most Palestinian Jews were forced to make major readjustments in cultic practice after the temple was destroyed in A.D. 70.

9:1-10
The Old Tabernacle

On the principle of correspondence between the heavenly and earthly tabernacles, see comment on 8:1-5. The writer follows the *Old Testament carefully in his description in 9:1-10, not conforming it at all to the modifications of his day. (Verses 4-5 were no longer true in his own day, elements having been removed. In many Jewish traditions, they would be restored in the end times.) The altar in 9:4 is connected grammatically to the holy of holies; even though some traditions favor the view that the incense altar was inside the holy of holies, the author probably means instead that it belonged to the holy of holies but was not inside, as the ark was. The Old Testament text plainly places the altar of incense in the sanctuary outside the holiest place. The Old Testament itself elsewhere—the Hebrew of 1 Kings 6:22—can put the matter ambiguously, however; but the author of Hebrews says that these items "belong to" it, not "are in" it.

Most of the details of the original tabernacle were meant to communicate something within its ancient Near Eastern culture. Some features simply informed the Israelites that this was a "temple." The three-part structure of the tabernacle, with the holy of holies in the back approached in a direct line from the front entrance of the tabernacle, was the standard design of Egyptian temples in Moses' day. The placement of the most expensive materials (such as pure gold) and dyes nearest the ark was an ancient way of glorifying the holiness of the deity and signifying that one must approach this deity with awe and reverence. Some other features of the tabernacle signify merely that God was being practical: whereas the later temple was built of cedar wood (like normal Canaanite temples), the tabernacle was built from acacia wood—the only wood available in the Sinai desert. Tent shrines were also known among nomadic peoples.

But the greatest teachings of the tabernacle lay in its contrasts with the shrines of surrounding cultures. Like most ancient Near Eastern temples, God's temple had an altar of sacrifice, an altar of incense (to overpower the stench of flesh burning from the sacrifices), a table and so on. But pagan temples often had a bed and similar apparatus for the image of the god, which was dressed, "fed" and entertained each day. Yet God's house had none of this—he was not an idol. Similarly, larger Egyptian temples often had shrines on either side for tutelary deities, but this feature is missing in God's temple—he was the only true God. The holiest place in ancient Near Eastern temples was what corresponded to the ark, on which would be mounted (sometimes enthroned on winged creatures like the cherubim) the image of the deity. But the climax of God's temple is that, where one would expect an image, there was none, because nothing could adequately represent his glory.

In suggesting that the details of the present, earthly tabernacle are significant (he believes they point to a heavenly tabernacle), the writer of Hebrews is not distorting the text. His modest suggestions are quite in contrast with the allegorizing of Philo, who explains each detail as a symbol of something that none of Moses' original readers would have guessed (linen as earth, dark red as air, the seven-branched candelabrum as the seven planets, etc.). Unlike the writer of Hebrews, however, some popular readers of the Old Testament today follow Philo's more fanciful method of interpretation.

9:11-22
The Final Blood Offering

Under Old Testament *law, sin could technically be expiated—God's anger appeased by substitution—only by bloodshed.

9:11. In typical first-century thought, the heavens were pure, perfect and changeless; the heavenly tabernacle, then, would be the perfect prototype for the earthly and the only one that was ultimately needed. On the temple "not made with hands," see comment on Acts 7:40-41 and 48-50.

9:12. The *high priest on the annual Day of Atonement brought the blood of a bull for himself and that of a goat for the people (Lev 16:6, 11, 14, 15-16). According to the *Qumran War Scroll, "eternal redemption" arrives only at the time of the end, after the final battle; here it is inaugurated through the permanently satisfactory offering of the eternal high priest (cf. Dan 9:24).

9:13-14. Had the author wished to cite a particular proof text for a priest offering himself up, he might have compared the one who sprinkles (as the *Old Testament priests did) the nations in Isaiah 52:15 with the following context of this person carrying the sins of Israel (Is 53:4-6, 8-12); but he is content to argue instead on the basis of his comparison with the Levitical offerings. He reasons by means of a "how much more" argument (a standard argument especially used by Jewish interpreters): if the blood of sacrifices on the Day of Atonement can remove sin (hypothetically; cf. 10:4), how much more effective is the blood of Christ.

9:15. Here the author brings together the "new covenant" (see comment on 8:6-13), redemption and an "eternal" inheritance (as opposed to the temporal inheritance their ancestors had sought in the land—chaps. 3–4; the Old Testament image of "inheriting" the Promised Land was applied in ancient Judaism to inheriting the world to come).

9:16-17. "Covenant" (NASB) can also be translated "testament" (KJV) or "will" (NIV, NRSV, GNT), and ancient writers often argued their points by plays on words. "Testaments" were sealed documents, opened only on the testator's death; "covenants" were agreements between parties or imposed by a greater party on a lesser one. (Some scholars have drawn a connection between the two in terms of the suzerain-vassal treaty form reflected in God's covenant with Israel. Because these covenants would be maintained in force dynastically—the suzerain's son would execute it after his father's death—the covenant could perhaps be understood in some sense as a testament. But this connection involves a different cultural world from the one in which the author of Hebrews usually moves, and it is not likely that he would have this connection in mind.) Regardless of the play on words (puns were used in antiquity for argumentation as well as wit), his point makes good sense: ancient covenants were normally inaugurated with blood (e.g., Gen 31:54).

9:18-20. See Exodus 24:6-8. One of the writer's minor changes in wording is attested elsewhere (Philo), but that may be only coincidence; ancient interpreters normally felt free to modify the text in minor ways to make more intelligible its relation to the writer's point. A more significant change is the addition of water, bright red wool, and hyssop: the writer apparently *midrashically connects Exodus 24 with Leviticus 14:6 or Numbers 19:6, to arouse the association of purification—in the latter case, from sin (Num 18:9).

9:21-22. See, for example, Exodus 29:37, Leviticus 8:15 and 16:16-20. To the Old Testament *Josephus added that even the priests' garments, the sacred utensils and so on were cleansed with blood; while the writer of Hebrews may not go this far, the whole cultus was in some sense dedicated through sacrifice. Blood was officially necessary for *atonement under the law (Lev 17:11); ritual exceptions were permitted for the poorest Israelites (Lev 5:11-13), but the general rule established the principle. (Jewish tradition also interpreted the sprinkled blood of Ex 24:8 as blood for atonement.)

9:23-28
A Sacrifice Sufficient for the Heavenly Sanctuary

9:23. The writer returns to the parallel between earthly and heavenly tabernacles (see comment on 8:1-5; 9:1-10): if the earthly sanctuary could be dedicated only by blood (9:11-22), so also the heavenly sanctuary. But a perfect sacrifice was necessary for the perfect sanctuary.

9:24-26. The "eternal" priesthood of one like Melchizedek (7:17; Ps 110:4) was not based on annual sacrifices; had "eternal" involved perpetual sacrifices, they would have had no beginning as well as no ending. But his priesthood is based on a once-for-all, finished sacrifice on the cross. Jewish people frequently divided history up into many ages (they proposed a number of different schemes), but the most basic was the division between the present age and the *age to come. The "consummation of the ages" (NASB) thus refers to the goal of history, climaxing in the coming of God's reign; in the decisive act of Christ, the writer recognizes that the future age has in some sense invaded history (cf. 6:5).

9:27-28. The author's point here is that just as people die only once (a commonplace even of Greek classical literature, though *Plato taught reincarnation), *Christ had to offer

himself for sin only once. When he appears (cf. v. 24) again, it will be to consummate the future salvation (just as the emergence of the priest into the outer court traditionally assured the people that the sacrifice had been accepted and their sins forgiven; cf. 1:14). "Bear the sins of many" is from Isaiah 53:12.

Although Josephus and probably some other Jewish thinkers dabbled with the language of reincarnation in Plato's writings (in Josephus's case, seeking to make the Pharisaic belief in *resurrection intelligible to Greeks), the vast majority of first-century Judeans expected instead one death, then resurrection and judgment (the sequence of the latter two varied in different Jewish accounts). Like the *Old Testament (Ezek 18:21-32), Jewish people often felt that death was the cutoff point for judgment. (Thus a late-first-century *rabbi warned *disciples to repent one day before death; those being executed should say, "May my death *atone for all my sins" [but cf. Ps 49:7-9, 15]; those who were dying often expected to be judged immediately—e.g., the story of Johanan ben Zakkai's pious fear when he was on his deathbed; one tradition said that the righteous were escorted by good angels and the wicked by evil ones; etc. But other Jewish traditions did allow for temporary punishments that expiated one's remaining sins: the view that the corpse's decomposition helped atone for sin, the placing of a rock on a coffin to symbolize the execution of one who died before being executed, and the view that no Israelite could spend more than a year in *Gehenna. These views of posthumous expiation have no clear parallel in the Old or *New Testament.) This writer follows the frequent Jewish and unanimous New Testament consensus (among those sources that comment on the question) that death ended one's opportunity for reconciliation with God.

10:1-18
The True Sacrifice of the New Covenant

Only *Christ could be a sufficient sacrifice for the heavenly sanctuary (9:23-28).

10:1. *Plato spoke of the earthly world, perceived by sensory knowledge (by the earthly senses), as consisting merely of shadows of the real world, apprehended by reason alone. By the first century, even many Jewish writers (in the *Diaspora) spoke of the heavens above as pure and perfect, and the earthly as bound by corruption. Such writers often spoke of the need of the soul to escape back to the upper regions from which it originally came. Without adopting a thoroughgoing Platonic worldview, the writer of Hebrews agrees that the earthly tabernacle, at least, is a shadow of the heavenly one (he has scriptural proof for this thesis—8:5), but he also echoes the view of Jewish *apocalyptic writers: heaven reveals what the world to come will be like. For this writer, however, the first stage (9:24, 28) of that future time had already invaded history (6:5).

10:2-3. The author again plays on the idea that what is perfect need not be changed or supplemented. *Rhetorical questions were commonly used in ancient reasoning. "Reminder" may mean that the annual Day of Atonement sacrifices remind people of their sins the way Passover reminded them of God's redemptive acts (Ex 12:14; cf. Lev 16:21)—in contrast to the policy of the new covenant (8:12).

10:4. Palestinian Judaism argued that the Day of Atonement, conjoined with *repentance, was necessary for the forgiveness of most violations of the *law.

Many philosophers had revolted against the idea of blood sacrifice, which they felt was unreasonable in a perfect temple focused on the mind. That is not the premise of this writer, however, who like people in a wide range of cultures in human history recognized the need for blood sacrifice (10:19); he merely felt that animal sacrifices were inadequate for human redemption in the heavenly sanctuary (9:23), and thus unnecessary now that Christ had come. He has plenty of *Old Testament precedent for relativizing the actual value of animal sacrifices (e.g., 1 Sam 15:22; Ps 51:16; Prov 21:3; Is 1:11; Jer 11:15; Hos 6:6; Amos 5:21-27), as he points out in his sample citation (Heb 10:5-7).

Before A.D. 70, many Diaspora Jews and some Palestinian Jews emphasized the spiritual, figurative use of sacrificial imagery, but only a few denied the necessity of sacrifices altogether. Everyone in the ancient world, whether they had visited Jerusalem's temple or not, was familiar with animal sacrifices, which were a standard part of religion; some philoso-

phers opposed it, but most ancient temples included it. This writer saw their past value as symbolic, pointing to the perfect sacrifice of Christ (9:23).

10:5-7. Here the author cites Psalm 40:6-8, following a common Greek version.

10:8-9. The author proceeds to expound the text he has just cited. Not only has God not desired sacrifices, but the offering of sacrifices can be distinguished from God's actual will; the latter is what the psalmist came to do.

10:10. Although the Old Testament was written in Hebrew and some *Aramaic, most first-century Jews scattered throughout the Roman world read the Old Testament in its Greek translation. Where the extant Hebrew text says "you have opened my ears," most Greek versions read "you have prepared me a body" (to do God's will). Jewish interpreters generally chose whichever reading they needed to make their point (some interpreters even changed readings slightly to make their point); both the writer of Hebrews and his audience are using the Greek version here. Consequently he expounds: "Not sacrifices, but rather a body to do God's will"—the ultimate sacrifice of Christ's body. Such argumentation fit ancient Jewish exegetical standards and is carried out quite skillfully.

10:11-14. The author returns to his basic text, Psalm 110:1, presupposing also 110:4. An eternal priest like Melchizedek (Ps 110:4) who was to remain seated until his enemies were put down (and the enemies were yet to be put down—Heb 2:8), must have already offered his once-for-all sacrifice; priests did not offer sacrifices in a seated position.

10:15-17. Like Christians, Jewish writers attributed the inspiration of Scripture to the "*Holy Spirit," who was viewed in most circles of ancient Judaism as the Spirit of *prophecy. The author returns here to one of his earlier texts, Jeremiah 31:31-34 (Heb 8:8-12), a practice commonly used to expound more recently cited texts.

10:18. If the new covenant (8:6-13) involves forgiveness of sins and sins being remembered no more (8:12; 10:17), then there is no longer a need to *atone for sins. The writer does not address the image of sin offerings or guilt offerings in Ezekiel's future temple (Ezek 40:39; 42:13; 43:18-27; 44:29). He would presumably have interpreted it symbolically, in view of the sufficiency of Christ's death (Is 53, etc.), Christ offering even more than Ezekiel's vision of hope.

10:19-25
The New Worship

10:19-20. The sanctuary was reserved for the service of the priests, but the most holy place (the Semitic expression is "holy of holies")—which is probably in view here—could be entered by the *high priest alone, and even he could enter only one day a year. But Jesus the forerunner (6:20; cf. 2:10; 5:9) had dedicated the heavenly sanctuary (9:23-28), so that his followers could join him in the full presence of God (cf. comment on Rev 21:16). The veil (see comment on 6:20; cf. Mk 15:38) had separated even the priests from the full holiness of God symbolized by the most holy place, but now believers in Jesus had complete and perfect access to God's presence (Heb 4:16). God dwelling among his people in the tabernacle had pointed to a personal relationship available to those who sought him even then (Ex 33:11), despite some limitations (Ex 33:23; 34:30-35).

10:21. This verse alludes to Jesus' superiority over Moses (Num 12:7); see comment on Hebrews 3:6.

10:22. "Drawing near" could be sacrificial or moral language in the *Old Testament; here it means entering the presence of God (10:19-20) and into relationship with God (7:19, 25) through Jesus the great high priest. "Hearts sprinkled" (9:13; see, e.g., Lev 14:7; cf. Ex 24:8 quoted in Heb 9:19-20) and "bodies washed" (e.g., Lev 14:9) are imagery from the Levitical order, but the writer has a spiritual cleansing in view (Ezek 36:25-29).

Like many other *Diaspora Jewish writers, the writer of Hebrews may accept the need for both inner and outer cleansing; but the bodily cleansing here is apparently initiatory (a perfect participle here in Greek) and thus presumably refers to *baptism. *Gentile converts to Judaism were baptized to free them from Gentile impurity; the *Qumran sect required everyone to be baptized (as the first of many washings) to forsake former worldly impurities; Christians baptized new believers as a mark of initiation into a wholly new life. The

symbolic value of Christian baptism would not have been lost on Jewish observers.

The conjunction of faith, hope and love as the primary virtues (10:22-24) appears to have been a specifically Christian formulation (e.g., 1 Cor 13:13; Col 1:4-5; 1 Thess 1:3).

10:23. This exhortation to "hold fast" is important given the opposition the readers face. Their critics insist that they return to the ritual observances practiced by other Jews in their city and compromise the absolute sufficiency of Christ. (Paul was not opposed to Christians engaging in sacrifices as a means of cultural identification, worshiping by thank-offerings, etc.—see, e.g., Acts 21:26; but like this author he would no doubt deny that sacrifices were necessary for *atonement—Rom 3:24-26. Because these readers were Diaspora Jews who probably could go to the Jerusalem temple only rarely, and no one in their community had gone to the temple since the war had started in A.D. 66, it is more the principle than the practice that is at issue here anyway. The issue is whether they will regard Jesus as an appendage to their Judaism or as its fulfillment who supersedes previous mandatory forms of practicing the *law.) As the Israelites of old should have trusted God to bring them into the Promised Land, so should this author's hearers. The "faithful" one in this case might be not God the Father (11:11) but Jesus (3:2, 5).

10:24. Some ancient groups like the *Epicureans engaged in mutual exhortation; it was a standard practice of early Christianity (Rom 15:14; 1 Thess 5:14).

10:25. Greek moralists often lectured on "concord" or "harmony," warning against individualism. Jewish teachers also warned against a spirit of separatism, and even Jewish separatists (such as the *Essenes) stuck together among themselves. Diaspora *synagogues functioned as community centers, and Jews gathered there especially on the Sabbath to read Scripture and to pray together. Those rarely in attendance would thereby exclude themselves from the active life of their community; given the hostile reception most Jews in many places received from the Gentile community, community cohesion was an important coping response.

Religious associations in the Greco-Roman world met together at various intervals, normally about once a month. Jewish people in the Diaspora could use their synagogues at any time, but especially gathered on weekly sabbaths (e.g., Acts 13:14, 42; 16:13). Christians seem to have gathered at least weekly (cf. the "fixed day" in Pliny, *Epistles* 10.96, an early-second-century description of Asian Christians from a pagan governor). But persecution (cf. Heb 10:32-39; 12:4) may have dissuaded some people from attending even relatively private house *churches; the Romans were suspicious of private meetings, although they would not be investigated in the East unless brought to the authorities' attention by a *delator* (accuser).

10:26-31
The Danger of Apostasy

Those who do not engage in the true worship, who do not continue to persevere (10:19-25), would ultimately fall away and be lost.

10:26. Judaism had long distinguished intentional and unintentional sin (Num 15:29-31; cf., e.g., Lev 4:2, 22); one who knew better would be punished more strictly than one who was ignorant. Sacrifices *atoned for sins of ignorance, but Judaism taught that no sacrifice availed for the person who knowingly rejected the authority of God's *law. (For such persons, many Jewish teachers insisted that *repentance, the Day of Atonement and death were all necessary. Jewish teachers also observed that those who sinned presuming that they would be automatically forgiven were not genuinely repentant and hence were not forgiven.) In the *Dead Sea Scrolls, slight transgressions required temporary penance, but deliberate rebellion against God's law demanded expulsion from the community. The sin in this context is unrepentant, thorough apostasy (10:29).

10:27. Here the author borrows the language of Isaiah 26:11, referring to the day of the Lord (for which believers hoped to be prepared—Heb 10:25). The context in Isaiah includes the raising of the righteous (Is 26:19).

10:28. The law of witnesses is Deuteronomy 17:6-7 and 19:15; apostasy from obedience to the true God is addressed in Deuteronomy 13:6-11 and 17:2-7. Jewish teachers recognized that everyone sinned in some

ways; but a sin by which a person declared "I reject parts of God's Word" was considered tantamount to rejecting the whole law and was reckoned as apostasy.

10:29. Compare 2:2-3; here the author uses a "how much more" argument. Garbage could be "trampled down," but what was sacred was to be approached only with reverence, and trampling it underfoot was the ultimate disrespect (e.g., Is 63:18; Mt 7:6). It was a great sin to treat the holy as merely profane or as unclean; Christians had been sanctified by Christ's blood (see comment on 9:19-22), but other Jews would simply regard Jesus' dead body as an unclean corpse (Deut 21:23). Insulting the *Spirit invited judgment (Is 63:10).

10:30. The author cites Deuteronomy 32:35-36, reading the first line of verse 36 with verse 35 instead of with what follows, to reinforce the contextual point that God had promised this vengeance against his own people. Unlike most of his citations, this one is closer to the original Hebrew form than to that of the extant Greek versions.

10:31. David had preferred falling "into God's hands," depending on his mercy, but the mercy was preceded by severe and rapid judgment (2 Sam 24:14-16; this was the prescribed judgment of the law in Ex 30:12). "Falling into [someone's] hands" and "living God" were both regular Jewish expressions.

10:32-39
Confidence in Their Perseverance

Although apostasy was a genuine possibility (10:26-31), the writer is confident that his readers, who have already endured much, will not apostatize (cf. comment on 6:9).

10:32-33. The athletic language of "conflict" (v. 32 NIV) or "struggle" (NRSV; see comment on 12:1-3) conjoined with "being made a public spectacle" (v. 33 NASB) or "publicly exposed" (NIV) could imply that the readers were subjected to the gladiatorial games. Although the writer probably does not mean this reference literally (since they were still alive—12:4), the image suggests the intensity of their struggle. It is not possible to identify the specific persecution involved without identifying the location of the letters' recipients (a difficult task; see introduction).

10:34. The confiscation of Christians' goods might match a situation presupposed in Macedonia (2 Cor 8:2), where both the Thessalonian and Philippian Christians were persecuted; but we do not know where the particular persecution described here occurred. That it could happen in the Roman Empire is beyond dispute: Jews were expelled from Rome under Tiberius and Claudius, although (apart from those drafted by Tiberius) they could have taken moveable property with them. Disputes over the equality of some elite Alexandrian Jews as citizens led to a Jewish revolt in the early second century, a massacre of the Jewish population there and confiscation of their property; in the first century, many Jews there had been driven out or killed and their homes looted during urban violence. Still considered a small Jewish sect, Christians were even more susceptible to public hostility.

The readers had remained faithful despite this persecution (cf. Tobit 1:20; 2:7-8). On the "prisoners" (no doubt fellow Christians detained in jails), see 13:3; cf. 11:36. For the "better possession," see comment on 11:10.

10:35-36. Both Judaism and Christianity (11:26) spoke of the reward for perseverance for God. On the promise, cf., e.g., 6:13-20; 11:9, 13 and 39-40.

10:37. This is a citation of Habakkuk 2:3, the wording slightly adapted to apply more specifically to the writer's point about the return of *Christ (possibly reworded by combination with part of Is 26:20, from the context of which the author took words in Heb 10:27).

10:38. Here the author quotes Habakkuk 2:4, on which see comment on Romans 1:17. He follows the *Septuagint (which speaks of drawing back) almost exactly, except that he reverses the order of clauses, mentioning the righteous first. (Also, like Paul, he omits the "my" in front of "faith," joining it instead to "righteous one." Although the most common Greek version had "my" faith, i.e., God's faithfulness, the Hebrew had "his" faith, presumably that of the righteous, as Paul and this writer take it.)

10:39. The writer expounds Habakkuk 2:4 (quoted in the previous verse) in inverse order, to end (as was normal in ancient rhetoric) on the desired note: perseverance by faith rather than apostasy. In the following chapter he defines genuine persevering faith.

11:1-31
Heroes of the Faith

After defining faith in 11:1 and introducing his thesis in 11:2, the writer surveys biblical history for samples of the kind of faith he is addressing. Faith as defined by this chapter is the assurance in God's future promises, an assurance that enables one to persevere (10:32-39).

In form, the chapter is a literary masterpiece. It follows the frequent literary practice called historical retrospective, a summary of Jewish history to make a particular point, as in texts like Acts 7, 1 Maccabees 2:49-69 and Sirach 44–50. (Ancient moralists often used examples of people who embodied the virtue they advocated, and sometimes wrote entire biographies for this purpose.) The writer builds the chapter around a literary device called *anaphora* (repetition of an opening word or words), beginning each new account with the same Greek word, "by faith."

11:1. The author defines faith in terms of future reward, as in 10:32-39 (the Greek word often translated "now" in this verse is literally "but" or "and"). Jewish people defined ultimate "hope" in terms of the future day of the Lord. This hope is, however, an unshakable conviction in the present: "assurance" (NASB, NRSV; "confidence"—NIV) appears in Greek business documents with the meaning "title deed." To the Greek reader, what was "not seen" was what was eternal, in the heavens; here it also means what was yet to happen, as in Jewish *apocalyptic expectation (11:7; cf. 11:27).

11:2. "Gained approval" (NASB) is literally "gained testimony," as in 11:4, 5 and 39: the evidence of their lives and God's advocacy guaranteed that they would be declared righteous on the day of judgment.

11:3. The *Old Testament often taught this principle (e.g., Prov 3:19-20), but because the writer starts at the beginning of biblical history, here he refers to the creation in Genesis 1. In Greek cosmology (e.g., Hesiod, Empedocles), as opposed to many of the Jewish sources (e.g., 2 Maccabees 7:28), the universe was formed out of preexisting matter in a state of chaos; *Plato and *Philo believed the visible universe was formed from visible matter. Yet Philo and many Jewish teachers believed that the material universe was formed according to God's invisible, ideal pattern, embodied in his "word" or his "wisdom." Although this view may betray some Greek philosophical influence, it was also rooted in and defended by means of the Old Testament (e.g., Prov 8:22-31).

11:4. Jewish literature praises its martyrs and offers Abel as the first example of martyrdom. (See, e.g., *4 Maccabees 18:10-19; Mt 23:35. In the *Testament of Abraham*, a *pseudepigraphic work of uncertain date, Abel even replaces the Greek Minos as the human judge of the dead [the role belongs to Enoch in **Jubilees*]. The *Ascension of Isaiah* and the *Apocalypse of Moses,* also Jewish works of uncertain date, extolled Abel among the righteous. In Philo, Cain's love of self leads him to eternal corruption; other early Jewish traditions, e.g., *Jubilees* and **1 Enoch*, provide him with other punishments.) That he still speaks is evident from the writer's implicit use of Genesis 4:10 in Hebrews 12:24.

11:5. Jewish tradition came to be divided on Enoch. The most Hellenized Jews identified him as Atlas or other figures. More prominently, *Essene and other traditions glorified Enoch as the most righteous saint and one who had never died (e.g., Sirach, *1 Enoch*, *Qumran's *Genesis Apocryphon, Jubilees*). Reacting against this consensus, many *rabbis eventually interpreted "God took him" as "God killed him" so he could die in a righteous state, since (they claimed) he alternated between righteous and unrighteous behavior.

The writer of Hebrews follows the most common Jewish interpretation, which was also the most natural interpretation of Genesis 5:21-24: God took Enoch alive to heaven, because he "walked with him"—i.e., was pleasing to him. Like some writers (such as *Pseudo-Philo), the writer of Hebrews follows the biblical account here exactly, omitting later elaborations.

11:6. Moralists characteristically drew morals from the examples they cited; here, if Enoch was pleasing to God, it is clear that he had faith. The moral that the author of Hebrews draws from the Enoch story (v. 5) is well adapted to the context in his own letter: besides faith, cf. "draws near" (10:22), "reward" (10:35; 11:26) and possibly "seeks" (13:14; cf. 12:17).

11:7. Noah was likewise a renowned hero of early Judaism, although later rabbis empha-

sized him less than early storytellers did, transferring the stories about his miraculous birth to Moses.

11:8. Judaism always extolled Abraham's faith (see the introduction to Rom 4:1-22). Historically, Abraham may have been part of a larger migration (cf. Gen 11:31-32), but his own obedience to God's call, leaving his home and relatives behind, was an act of faith (Gen 12:1, 4). Abraham's obedience was applied as a model of faith as early as the writing of Genesis, when Moses called his people to turn their backs on Egypt; the writer of Hebrews calls his readers to be ready to forsake the favor of their own families.

11:9-10. *Diaspora Judaism often described God as "architect" and "builder" (cf. 3:4) of the world. Like philosophers who could compare the cosmos with a city, Philo saw heaven (or virtue or the Logos, the divine Word) as the "mother city," designed and constructed by God; one could not look for the heavenly Jerusalem on earth. Other Jewish people saw the new Jerusalem as the city of God for the future age (*Dead Sea Scrolls, etc.; see comment on Gal 4:26); on its foundations, see comment on Revelation 21:14. Compare also Hebrews 13:14. Old Testament texts like Psalm 137:5-6 and *New Testament texts like this one suggest that Christians' future hope is inseparably connected with Israel's history, and Christians do biblical tradition a great disservice to cut it loose from its historical moorings in ancient Israel.

11:11. Sarah was a woman of faith in the Old Testament just as Abraham was a man of faith; subsequent Jewish texts also came to extol her greatness as a matriarch.

11:12. Here the author quotes Genesis 22:17, often echoed subsequently in the Old Testament.

11:13-16. The Jewish people in the Diaspora saw themselves only as "sojourners" among the nations; the language here has Old Testament precedent (especially Gen 23:4; cf. Lev 25:23). Like Philo, this writer believes that earth is not the home of the righteous; heaven is. But he envisions this idea in more traditionally Jewish terms than Philo, looking for a *future* city (see also comment on 11:9-10; cf. Rev 21:2).

11:17-19. The offering of Isaac, after years of waiting for the promise of this son, was Abraham's ultimate test of faith (Gen 22), and is often stressed in Jewish sources. This act was regarded as a model of faith to be emulated when necessary (see 4 Maccabees 14:20; 15:28; 16:20). Although Jewish tradition also noted Isaac's willingness to be sacrificed (as early as Pseudo-Philo), the writer of Hebrews does not add to the biblical *narrative, except to expound the nature of Abraham's confidence (that God would raise him from the dead if need be; God's power to raise the dead was celebrated daily in Jewish prayers). "Only" son (cf. Gen 22:2, Hebrew text and Jewish traditions) was sometimes used, especially with regard to Isaac, to mean "specially loved" (*LXX, other Jewish traditions), even though Isaac was never Abraham's only son.

11:20. Jewish readers recognized that Isaac's blessings were inspired and that they included predictions of the future (Gen 27:28-29, 39-40).

11:21. Genesis 49 was also regarded as prophetic, and Jewish writers later expanded the predictions (also writing testaments for each of the twelve patriarchs to the patriarchs' children).

11:22. See Genesis 50:24-25. Joseph's faith provided a hope in a promise that transcended his own mortality.

11:23. The writer of Hebrews follows the biblical account here (in its LXX form—the Hebrew mentions only the mother's decision to rescue him—Ex 2:2-3), but many Jewish writers expanded the story of Moses' birth, especially his beauty, into reports that his glory illumined the room at birth and so forth. These stories became very popular as time went on.

11:24-25. Although the author here draws a moralist application, he does not go beyond the biblical account. Many Jewish stories of this period, especially Diaspora Jewish stories, portrayed Moses as an Egyptian military hero and stressed his great learning and knowledge (see comment on Acts 7:22). Yet the writer of Hebrews might allow the view affirmed by Philo—that Moses as son of Pharaoh's daughter was his heir. If this is the case (following a Roman understanding of adoption), Moses' rejection of this status to maintain his identification with his oppressed people (11:26) is all the more significant. (Of course, his sacrifice is significant enough in any case.)

Greek philosophers and moralists commonly stressed the superiority of enduring hardship over succumbing to the rule of pleasure, as Jewish tradition stressed honoring God above all else.

11:26. Forsaking riches for something greater, like piety or wisdom, was a common moral in Jewish and Greco-Roman stories, and the biblical story of Moses' life certainly illustrated that motif.

11:27. Exodus 2:14-15 indicates that Moses was afraid of the king; if this text refers to Moses' first flight from Egypt after slaying the Egyptian, perhaps the writer means a particular kind of fear (i.e., Moses was not afraid enough to deny his people), or perhaps he relativizes that fear by emphasizing Moses' faith in the unseen God (other writers, like Philo and *Josephus, minimize or eliminate fear as the cause of Moses' escape). But he may refer to Moses' second departure from Egypt, with Israel following him; verse 28 also speaks of him (singular) keeping the Passover, although it is clear that all Israel kept it. Diaspora Judaism often called God "the Invisible."

11:28. Compare Exodus 12, with which all Jewish people were familiar, especially from the annual Passover celebration. Because the nature of his account is biographical, the author yields only reluctantly to describing the general experience of Israel, as opposed to Moses (v. 29).

11:29. Compare Exodus 14:29 and Nehemiah 9:11. Exodus reports the completion of Israel's faith after the miracle (Ex 14:31), but Moses and his people had to act in some faith to enter the basin (cf. Ex 14:10-22). Jewish teachers debated the immediate cause of the exodus, some affirming Israel's faith but many attributing the miracle to the faith or merit of their ancestors (see, e.g., *Mekilta Pisha* 16.165-68; *Mekilta Beshalach* 4.52-57).

11:30. Compare Joshua 6. Some scholars have complained that the site of Jericho was uninhabited in Joshua's period, because, in the areas excavated, little remains of the city from that time. But the excavator reasonably attributed the loss of this level of the city's ruins to erosion; mounds are normally formed, and ruins preserved, only when city walls exist. If Jericho's walls fell down, one would expect most of that stratum of ruins to have eroded away.

11:31. Later Jewish literature often praises Rahab's beauty and sometimes sees her as a prophetess and as a model convert to Judaism; but although Josephus speaks favorably of her, Philo and most earlier Jewish literature comment little on her. Hebrews, like James 2:25, follows the biblical account.

11:32-40
A Summary of Other Exploits of Faith

11:32. The writer's theme is still "by faith," but like Philo, *Seneca and other *rhetorically trained writers, he remarks that he could go on but will not do so, settling instead for a quick summary. This remark gives the impression (in this case quite accurate) that he could provide much more evidence or many more examples; but he determines not to strain the readers' patience by continuing long after he has made his point (as some ancient rhetoricians were known to do even in law courts, displaying their eloquence for several hours without a break). By mentioning what he protests he cannot describe, however, he outlines what he would have covered. This too was a standard rhetorical device, allowing him to hurry while mentioning what he claims he cannot mention.

He names several of the judges (commanded to shepherd Israel—1 Chron 17:6): David, the ideal king; Samuel, founder of the schools of the prophets and overseer of the transition from judges to monarchy; and he mentions other prophets. That Barak replaces Deborah in the list fits later rabbinic tradition's tendency to play down biblical prophetesses (contrast Pseudo-Philo 30-33), although the *Old Testament mentions neither Deborah nor Barak outside Judges 4–5. From the perspective of some first-century readers, Barak would be official victor even though Deborah was the main leader of faith.

11:33. The first three statements in the verse are general, but the fourth applies specifically to Daniel (Dan 6:16-24; cf. 1 Maccabees 2:60); although this story was amplified in early tradition (Bel and the Dragon 31-32), the writer of Hebrews follows the biblical account. Other Jewish writers also presented the endurance of Daniel and his friends before the lions and the flame as models to be emulated

(for martyrs see *4 Maccabees 13:9; 16:3, 21-22).

11:34. Quenching the power of fire refers especially to Daniel's three friends (Dan 3:23-27; 1 Maccabees 2:59; *3 Maccabees 6:6; cf. Is 43:2), although Jewish tradition also transferred elements of that story to Abraham (*Pseudo-Philo and later rabbis). "Were strengthened from their state of weakness" may refer particularly to Samson's regaining his strength (Judg 16:28-31), or it may be a general statement like several that follow. Much of the language of this verse comes from 1 Maccabees, which contains much historical material about pious Jewish defenders of the *law after the Old Testament period and before the New Testament period. It was widely known among Jewish people throughout the ancient world.

11:35-36. Women received their dead back to life under Elijah and Elisha (1 Kings 17:21-24; 2 Kings 4:35-37). "And others" marks a transition: faith does not always bring deliverance (cf. Dan 3:18), as the author's readers already knew (Heb 10:32-39) and might learn further (12:4). Nearly all Jews knew the stories of Maccabean martyrs, who were tortured in various ways: scalded to death, having skin flayed off, stretched on the wheel and so on. Regular torture practices of the Greeks included fire, thumbscrews and (what is probably meant by "tortured" here) stretching on a wheel to break the person's joints, then beating the victim to death (sometimes pounding the stomach as if it were a drum) in that helpless position. The Maccabean martyrs were scourged, a punishment that the Romans had continued to use as well. All Jewish sources that addressed the issue agreed that martyrs would receive preferential treatment at the *resurrection, and 2 Maccabees declares that this was the hope that enabled the martyrs to endure.

11:37. "Sawn in two" fits a Jewish tradition that was popular in the second century A.D. and later but probably already known in the writer's time. According to this story, when Isaiah hid in a tree the wicked king Manasseh had it—and Isaiah—sawed in half. Those stoned to death include a prophet named Zechariah (2 Chron 24:20-22; Mt 23:35); some Jewish traditions added Jeremiah. Prophets who lived outside society sometimes wore coarse animal skins (see the *LXX for Elijah's "mantle"); Elijah and similar prophets also wandered in the wilderness, and the *Maccabees were later forced to live in such circumstances.

11:38. The Maccabean guerrillas hid out in caves in the Judean mountains, as David's band had in the time of Saul long before. Elijah and other prophets were sometimes forced to live in the wilderness. The idea of righteous persons of whom the world was unworthy has many partial parallels, although this formulation appears to be the author's own.

11:39. This verse is the concluding summary of 11:3-38, part of it rehearsing the author's thesis in 11:2. Concluding summaries of one's thesis were standard *rhetorical practice.

11:40. "Made perfect" here refers to the consummation of salvation (1:14), the resurrection of the dead (11:35). All the righteous would be raised together at the very end of the age (Dan 12:2, 13).

12:1-3
The Ultimate Hero of Faith

The image in 12:1-3 and possibly in 12:12-13 is that of runners disciplining themselves for the race. Athletic contests were a common image in Greco-Roman literature, often used for the moral battle waged by the wise person in this world; the *Hellenistic Jewish work *4 Maccabees sometimes applied the image to martyrs. This passage (Heb 12:1-3) is the climax of the narration of past heroes of the faith (chap. 11).

12:1. "Witnesses" can function as those watching a race ("cloud" was often applied figuratively to a crowd), but the particular witnesses here may be those who testified for God or received his "testimony" that they were righteous (the Greek of 11:2, 4, 5, 39). (The image could be that of a heavenly court made up of faith heroes of the past, who would judge those now vying for the same honors; the image of the heavenly court appears elsewhere in ancient Jewish sources. The idea does not correspond to the picture sometimes found in some writers such as, for example, the second-century *Stoic philosopher Marcus Aurelius [cf. Philo], where souls of the departed floated around for awhile after death before being resolved into the fire.) "Laying aside weights" (KJV) may refer to removing artificial weights used in training but not in races, but more

likely it refers to the Greek custom of stripping off clothes to run unencumbered. The image would represent anything that would hinder his readers from winning their race (ancient writers sometimes used "weights" figuratively for vices); this encouragement is significant, for like Israel of old in the wilderness, they may be tempted to turn back.

12:2. On "author" or "pioneer," see comment on 2:10; for "perfecter," see 9:9, 11 and 10:14. Like most ancient moralists, the writer uses human models to illustrate his chosen virtue, but his climactic illustration of the virtue of faith is the initiator and fulfiller of faith, who suffered in the hope of future reward, as these readers are to do (10:32-39). Maccabean martyrs were said to have "looked to" (same word as here, NRSV) God, thus enduring tortures to the point of death (4 Maccabees 17:10). The cross was an instrument of "shame" in both Roman and Jewish (cf. Deut 21:23; Josh 10:26-27) thought.

12:3. The verbs translated "grow weary" and "lose heart" were sometimes used for the exhaustion a runner could face. (The call to endurance in 12:1 reflects the language of long-distance races.)

12:4-13
Accepting Suffering as God's Instruction

Rather than questioning their faith when they are persecuted, the readers are to embrace the suffering as a gracious opportunity to learn God's heart better.

12:4. Although some Jewish teachers said that one could violate most biblical laws if necessary to save one's life, provided that one did not profane the name of God, the earlier martyrs felt that compromising the commandments to save one's life constituted public profanation of God's name. Jesus, the ultimate hero of their faith, had shed his blood (12:2-3; cf. 9:12); his followers have to be prepared to do the same. The ultimate test of Greek athletic contests (12:1-3) was boxing, which often drew blood; but the language here indicates the ultimate test that Jesus portrayed as an expected part of Christian discipleship (Mk 8:34-38): martyrdom.

12:5-7. This quotation is from Proverbs 3:11-12 but has many biblical (e.g., Deut 8:5; Ps 94:12) and postbiblical (e.g., **Psalms of Solomon* 3:4; 7:3; 8:26; 10:1-3; 13:9-10; 14:1-2; 18:4) Jewish parallels; *Philo and some *rabbis used Proverbs 3 similarly. In the context of Jewish wisdom literature, discipline was a sign of a father's love for his children, his concern that they would go in the right way; some Jewish teachers felt that God purged the sins of his children by sufferings designed to *atone and to produce *repentance. Although this writer would deny that any person's sufferings could have atoning value, except for those of God in the flesh (7:25-28; cf. Ps 49:7-9), he undoubtedly agrees that they can help lead one to repentance or to a deeper relationship with God (Ps 119:67, 71, 75).

In the Greek world, the term translated "discipline" (NIV, NASB) was the most basic term for "education" (although this usually included corporal discipline), so the term naturally conveyed the concept of moral instruction. Some philosophers like *Seneca also used the image of God disciplining his children for their good, just as Jewish writers did.

12:8. In antiquity, calling someone an "illegitimate child" (not born from a married union) was a grievous insult; "illegitimacy" negatively affected one's social status as well as one's inheritance rights. Fathers were more concerned for their heirs and usually invested little time in sons unable to inherit.

12:9. God was often called "Lord of spirits" (i.e., Lord over the angels); here he is called "Father of spirits" in contrast to "earthly fathers." Jewish people developed the *Old Testament image of God as Israel's father (e.g., Ex 4:22), often speaking of him in these terms. This argument is a standard Jewish "how much more" argument: if we respect earthly fathers, how much more should we respect the superhuman one?

12:10-11. Jewish teachers recognized that God's discipline, even the suffering experienced in martyrdom, was temporary, and that he would afterward reward the righteous greatly (e.g., in the *Apocrypha: Wisdom of Solomon 3:5; cf. 2 Maccabees 6:13-17; 7:18, 32-33). They also believed that whereas he disciplined his people, he punished the wicked more severely (Wisdom of Solomon 12:22) or would do so in the time to come (most rabbis, *apocalyptic visionaries and writers, etc.).

12:12. "Weak hands" and "feeble knees" were common descriptions of weakening and slackness (cf. Is 13:7; 35:3; Jer 47:3; 50:43; Ezek 7:17; 21:7; Zeph 3:16), applied to moral or religious concerns in the *Dead Sea Scrolls, in Sirach 25:23 and elsewhere. It may apply to the imagery of the race in Hebrews 12:1-3.

12:13. "Make straight paths for your feet" suggests the quickest course in a race; the words are taken from the *Septuagint of Proverbs 4:26 with few changes.

12:14-29
Rejecting the Greatest Revelation

Turning away from Jesus was worse than Esau's shortsighted apostasy (12:16-17) and more serious than rejecting the revelation of God at Sinai (12:18-21), for Jesus is greater than Moses and greater than Abel (12:24)—he is the true and rightful leader of Israel (12:23). The vast majority of ancient Jews sought to keep the *law and were embarrassed by the rebellion of many of their ancestors in the wilderness; the writer warns that if his readers turn their backs on Christ, they are even worse than their ancestors.

12:14-15. The image of a bitter root that can spread to infect many is from Deuteronomy 29:18, although many texts use similar images (1 Maccabees 1:10; a *Qumran hymn; the rabbis). The text in Deuteronomy is quite appropriate, for it refers to apostasy, as the writer of Hebrews does.

12:16. Here the author refers to Genesis 25:31-34. Philo regarded Esau as enslaved by sensual and temporal desires because of actions such as this one. Esau did not act as if he viewed life from a long-range perspective, much less an eternal one (the rabbis inferred from this text that he denied the future *resurrection of the dead). "Immoral" here is literally "sexually immoral" (NIV; cf. "fornicator"—KJV), the view of Esau that prevailed in Jewish tradition, undoubtedly based on his initial preference for *Gentile wives (Gen 26:34-35; cf. 28:9), which dismayed his parents (26:35; 28:8).

12:17. Despite the "tears," which reflect Genesis 27:38, Esau was unable to persuade his father Isaac to change his mind, probably because the first blessing could not be annulled. (One commentator points out that the expression "place for *repentance" was used in Roman legal documents as "an occasion to reverse a previous decision." Although neither the author nor his readers would be thinking in terms of legal terminology, it might reflect a more general idea, which could apply to Isaac's choice [although the commentator applies it to Esau].) Esau's disinheritance from the promise (cf. Heb 6:12-18) was settled. (According to one nonbiblical Jewish tradition, Jacob later killed Esau in a war [**Jubilees* 38:2], but the writer of Hebrews does not go beyond the biblical account.)

12:18. Here the author describes Mount Sinai at the giving of the law (Ex 19:16; Deut 4:11-12).

12:19. In Exodus 20:18-21, when God had given the Ten Commandments, the people were afraid of God's awesome holiness. They wanted Moses to mediate for them, fearing that if God spoke to them directly, they would die (Ex 20:19; Deut 5:25-27), for he came as a consuming fire (Deut 4:24; 5:24-25). But God's purpose was to scare enough sense into them to get them to stop sinning (Ex 20:20).

12:20. Here the author uses Exodus 19:12-13. God was so unapproachably holy that violation of his command not to approach the mountain from which he gave the law was punishable by death, even for animals that happened to wander that way unwittingly (cf. Num 17:13).

12:21. When God became angry at Israel for violating his prohibition of idolatry, even Moses was afraid of God's anger (Deut 9:19).

12:22. Mount Zion (Jerusalem or the Temple Mount in Jerusalem), as opposed to Mount Sinai, was to be the place of the giving of the new law in the end time (Is 2:1-4). On the heavenly Jerusalem see comment on 11:9-10; everyone in antiquity would regard a heavenly place of revelation as superior to an earthly place, no matter how glorious (12:18-21) the latter was.

Jewish tradition stressed the vast number of angels present at the giving of the law (eventually claiming thousands per Israelite); the writer of Hebrews probably takes the angels from Deuteronomy 33:2 or Psalm 68:17, a text that probably refers to the giving of the law, as later Jewish tradition also understood it.

12:23. Long before the first century, the *Septuagint applied the term translated

"*church" to the "assembly" (NRSV) or "congregation" of Israel in the Hebrew Old Testament; thus the writer of Hebrews here contrasts the congregation led by Jesus with the one led by Moses (12:19). (On the "firstborn," see comment on 1:6; because the reference is in the plural, it may refer to God's people as a whole here—e.g., Ex 4:22). "Enrolled" (NASB, NRSV) means that their names were "written" (KJV, NIV, GNT) on the list in heaven; the Jewish images of heavenly tablets and the book of life were common (see comment on Phil 4:3; Rev 20:12). In *apocalyptic texts such as **1 Enoch*, "spirits" or "souls" referred to the righteous dead in heaven (various texts apply it even more commonly to angels, but that connection would not make sense in regard to "spirits of righteous men," which was a usual designation for the righteous dead, not for guardian angels). Many *Diaspora Jews believed that the righteous finally attained perfection in death (or in resurrection; cf. Heb 11:40; it has been suggested that the righteous of 12:23 include the heroes of chap. 11).

12:24. Moses was considered mediator of the first covenant. As mediator of a new covenant (9:15; see comment on 8:6-13), Jesus had to inaugurate it through the sprinkling of blood (see comment on 9:15-22). Abel's blood spoke, bringing condemnation against his murderer (Gen 4:10; cf. Prov 21:28; see comment on Heb 11:4). (In rabbinic tradition, the blood of all the descendants who would have been born from Abel cried out to God against Cain, and Cain thus had no share in the world to come. Blood crying out is also found in the **Sibylline Oracles*, 2 Maccabees 8:3 and elsewhere; cf. Deut 21:1-9. See comment on Mt 23:35 for the traditions about Zechariah's blood testifying; other rabbinic stories also suggested that they believed the blood of a murdered person kept seething till it had been avenged.) Jesus' blood, dedicating a new covenant of forgiveness, thus speaks "better things" than Abel's blood.

12:25. The comparison between Mount Sinai and a heavenly Mount Zion returns to the writer's standard *qal vahomer* or "how much more" argument (a fortiori arguments, "from lesser to greater"—here worked in converse—were common, especially in Jewish argumentation, but also appear in Greco-Roman and other argumentation; cf. Prov 15:11). If the law was glorious, and profaning it was something to fear, "how much more" to be feared is profaning the more awesome glory of the new covenant given from heaven (12:25-29).

12:26. The land quaked when God came to give the law on Mount Sinai (Ex 19:18; cf. **2 Baruch* 59:3); later Jewish tradition amplified this point to say that God shook the whole world. The idea of a great end-time earthquake has Old Testament (Is 13:13) and later Jewish parallels (e.g., *2 Baruch* 32:1), but the writer quotes Haggai 2:6 (cf. 2:21) directly.

12:27. The author expounds the text he has just cited. Because Haggai 2:5 mentioned a promise God made when he brought Israel out of Egypt, and "once more" in 2:6 refers to a particular previous shaking, it was natural to read the first shaking of 2:6 as what happened at Sinai. The second shaking was clearly the future one when God would subdue the nations and fill his temple with glory (2:7). The writer of Hebrews adds to this text an interpretive perspective he shares with his readers, a perspective stressed in Greek philosophy but not incongruent with the Old Testament: what cannot be changed is truly eternal.

12:28. Like many Jewish writers, the author of Hebrews uses the language of sacrificial offerings figuratively for the appropriate attitude of worship (cf. 13:15; see comment on Rom 12:1). For the unshakable *kingdom, cf. perhaps Psalm 96:10 (especially in the *LXX, numbered 95:10).

12:29. The author takes over Deuteronomy 4:24 directly; cf. also Deuteronomy 9:3 and Exodus 24:17. Deuteronomy 4:24 goes on to call God "a jealous God"; Hebrews 12:29 is clearly a warning against taking his ultimate revelation for granted.

13:1-17
Closing Exhortations

Parenesis, an ancient *rhetorical and literary style especially consisting of moral exhortations loosely fitted together, could be conjoined with other literary elements. Moral exhortations often followed argumentation, as in many of Paul's letters (e.g., Rom 12–14; Gal 5–6; Eph 4–6).

13:1. See comment on 10:25; cf. 12:14. The

bonds of Christian community would also hinder apostasy from that community.

13:2. Hospitality normally involved housing and caring for travelers; the greatest example of this virtue cited in Jewish texts was Abraham, who welcomed the three visitors (Gen 18). Because at least two of them turned out to be angels, this account is the most natural referent of the present exhortation. (Other stories, like the early Jewish story of Tobit or Greek stories about gods visiting people in disguise, are of more secondary value, but illustrate how readily ancient readers might have received the exhortation.)

13:3. By the second century, Christians were known for their care for the imprisoned. Some philosophers regarded visiting those who were in prison as a virtue, although Palestinian Judaism was largely silent on the issue, compared to its emphasis on visiting the sick or helping the economically oppressed (except for visiting Jews captured or enslaved by pagans). "The prisoners" probably refers to some Christians imprisoned for their faith or for practices related to it (as in 13:23). Roman law used prison as detention until punishment rather than as punishment itself; sometimes prisoners had to depend on outside allies for food.

13:4. Many ancient writers spoke of honoring the "(marriage) bed" (the "bed" was a euphemism for intercourse); one story goes so far as to emphasize a virgin's purity by noting that no one had ever even sat on her bed. Male sexual immorality was rife in Greco-Roman society, which also accepted prostitution. Pedophilia, homosexual intercourse and sex with female slaves were common Greek practices until a man was old enough for marriage. A few Greek philosophers even thought marriage burdensome but sexual release necessary. The writer accepts not typical Greek values, but God's values represented in Scripture and also upheld by Jewish circles in his day.

13:5. The author draws this quotation especially from Deuteronomy 31:6, 8 and Joshua 1:5, although the idea was common in the *Old Testament (cf. 2 Chron 15:2; Ps 37:28). Moses spoke it to all Israel in the third person, but the writer, who regards all Scripture as God's inspired Word, uses Joshua 1:5 (an assurance oracle, one form of Old Testament *prophecy, to Joshua) to adapt it to the first person. The reference to love of money is characteristic of general parenesis (moral exhortation) of the day but may be particularly related to the economic consequences of following Jesus in a hostile culture (Heb 10:34; 11:26).

13:6. Here the author cites Psalm 118:6; cf. Psalm 56:11. The author may add this quotation to Deuteronomy 31:6 and 8 as an implicit *gezerah shavah* (linking of texts with a common key word or phrase), because Deuteronomy 31:6 and 8 say that the hearers should not be afraid (although the writer of Hebrews does not quote that line).

13:7. Public speakers and moralists generally cited examples for imitation, especially those most closely known to both writer and readers. The past tense of the verbs here may suggest that some of them have died (though apparently not by martyrdom in their location—12:4). "Led" probably refers to local leaders rather than someone like Paul, who was likely martyred a few years before this letter was sent.

13:8. *Philo and probably many *Diaspora Jews particularly emphasized the Old Testament picture of God's changelessness (Ps 102:27; Mal 3:6; cf. Is 46:4), because they had to communicate the truth about God to Greeks, who felt that only what was changeless was truly eternal.

13:9. Leviticus 11 and Deuteronomy 14:3-20 listed "unclean" foods that Jewish people were to avoid, thus differentiating them from the nations around them. Philo allegorized these food laws but argued that one should still keep them literally; at the same time, he also testifies that some extremely Hellenized Jewish people in his day viewed them as only symbolic and did not practice them. The writer of Hebrews does not reject them by interpreting them nonliterally; he simply believes that a new time has come, and the foods previously forbidden did not directly benefit those who abstained, making the prohibitions no longer necessary.

13:10. Now the author addresses a special kind of food in the Old Testament: the priests' portion in the tabernacle/temple (see comment on 1 Cor 9:13). Believers, he says, serve as priests (13:15) at a different kind of altar (cf. 7:13).

13:11. Burning sacrifices outside the camp

was part of several different rituals (cf. Lev 9:11; Num 19:3; the phrase is common in Leviticus and Numbers and appears in the *Dead Sea Scrolls), but the reference here is to the Day of Atonement, when the priest went into the holy of holies with the blood of the sacrifice (Lev 16:27). This is the sacrifice Jesus fulfilled for the heavenly altar mentioned previously in Hebrews.

13:12-13. Blood was sprinkled to "sanctify" (set apart as holy) or "cleanse" things under the *law (9:22). (That Jesus could cleanse by his own blood may indicate his superiority to the Old Testament *high priest, who had to wash himself before returning to the camp after the sacrifice—Lev 16:28.) That Jesus was crucified and buried outside Jerusalem's walls fits both the Gospel accounts and the Jewish requirement that the dead be buried outside the city (so as to avoid contracting ritual uncleanness caused by contact with graves; cf., e.g., Lev 24:14; Num 15:35-36; Deut 17:5; 22:24). Roman law also required that crucifixions occur "outside the gate." (Some commentators have also noted that the sin offerings of the Day of Atonement were burned outside the camp—Lev 16:27—but it should be observed that they were also sacrificed in the temple or tabernacle—Lev 16:5-19.) Leaving the camp for these Jewish-Christian readers may imply being willing to be expelled from the Jewish community whose respect they value, to follow the God of Israel wholeheartedly (cf. Heb 11:13-16).

13:14. See comment on 11:10 for the hope of the eternal Jerusalem in ancient Judaism.

13:15-16. The Dead Sea Scrolls often use sacrificial language for praises, as do other ancient writers (see comment on Rom 12:1); Hebrews is probably especially dependent, however, on Hosea 14:2 here (cf. also the Hebrew text of Is 57:19). For spiritual sacrifices, cf. also Psalm 4:5; 27:6; 40:6; 50:7-15; 51:17; 54:6; 69:30-31; 119:108 and Proverbs 21:3. *Pharisees also stressed God's acceptance of piety as a spiritual offering, a factor that may have helped Pharisaism survive the destruction of the temple in A.D. 70; only a few of the special Palestinian Jewish movements, such as Pharisaism's successors and the Jewish Christians, survived without the temple.

13:17. The writer urges his readers to submit to present leaders (probably as they did to former ones—13:7), whom he presents as "watchmen" (see Ezek 3:17; 35:7; cf. Is 21:8; Hab 2:1). A theme of Greco-Roman moralists had long been advice to peoples on how to submit to rulers; this author gives a brief exhortation that functions as a sort of "letter of recommendation" (on these, see comment on 2 Cor 3:1), placing his own authority behind that of their *church's leaders. This author is not as leader-centered as some other groups like the *Qumran community were, however; the Dead Sea Scrolls report that the leaders of the community would determine members' progress or lack of it, affecting members' standing in the community, hence before God (cf., e.g., CD 13.11-12; 4Q416-17).

13:18-25
Conclusion

13:18-19. This might be the prayer request of one unjustly imprisoned; but cf. 13:23.

13:20-21. On Jesus as the "shepherd," see comment on the introduction to John 10:1-18. The *Septuagint of Isaiah 63:11 says that God "brought up the shepherd of the sheep" (Moses) from the sea. The prophets had also prophesied a new exodus (which could include coming up from the sea), which was fulfilled in *Christ (on comparing coming up from the sea and the *resurrection, see comment on Rom 10:7).

The first covenant was inaugurated by "the blood of the covenant" (Ex 24:8), sometimes called the "eternal covenant" (**Psalms of Solomon* 10:4; Dead Sea Scrolls). But the new covenant would also be called "eternal" (Is 55:3; Jer 32:40; Ezek 37:26), and it was the blood of this covenant to which the author of Hebrews refers (9:11-22).

13:22. Philosophers and moralists provided "messages of exhortation." Such spoken messages could also be given in writing, especially in letter-essays like Hebrews. Professional public speakers (*rhetoricians) often remarked that they had spoken briefly or poorly when such was clearly not the case, to claim for themselves less than was obvious.

13:23. If, as is likely, Timothy was arrested under Nero in Rome, he may well have been released on Nero's death, because the Praetorian Guard and the Roman aristocracy had

long before lost faith in Nero's policies. This background would set the letter in the late 60s (see introduction).

13:24-25. "Those from Italy" could mean people from Italy now living elsewhere, possibly sending greetings back to Italy; most commentators who take this view think it refers to Aquila and Priscilla (Acts 18:2). More likely—especially given the probable place of Timothy's imprisonment (13:23)—is the view that the author sends greetings from *saints in Italy, and that the letter is written from Rome to a different location, probably to a city in the eastern Mediterranean region.

James

Introduction

Authorship. That "James" need not further specify which James he is in 1:1 probably suggests that he is the most prominent and well-known James of the early *church, James the Lord's brother (Acts 12:17; 15:13-21; 21:17-26; 1 Cor 15:7; Gal 2:9, 12), as in church tradition. (James was a common name, and when one spoke of a less commonly recognized individual with a common name, one usually added a qualifying title, e.g., "*Plato the comic poet," "James the lesser" in the apostolic list, and many people in ancient business documents.) Who else would have the status in the church to write to the "dispersed twelve tribes" (James 1:1)?

The main objection to this proposal is the polished style of the Greek language of the letter, but this objection does not take account of several factors: (1) the widespread use of *rhetoric and more than sufficient time for James, the main spokesperson for the Jerusalem church, to have acquired facility in it; (2) that as the son of a carpenter he had probably had a better education than Galilean peasants; (3) the spread of Greek language and culture in Palestine (e.g., *Josephus, *Justin Martyr); (4) excavations showing that most of Galilee was not as backward as was once thought; (5) the widespread use of amanuenses (*scribes) who might, like Josephus's editorial scribes, help a writer's Greek. This last point would be especially appropriate for the leader of the mother church, in the one overwhelmingly Jewish city that also provided advanced education in Greek works (cf. the Greek in Acts 15:23-29).

The situation depicted in the letter best fits a period before A.D. 66 (the Jewish war with Rome), and James was killed about A.D. 62 (Josephus, *Jewish Antiquities* 20.200). It is also possible that James's followers edited his material relevant to the war and re-released it in collected form after his death, in the wake of the war or tensions leading up to it. This could explain the *Diaspora audience of James 1:1 even though the material in the letter is quite relevant to a Judean setting. In any case, the material in the letter probably should be viewed as genuinely from James; *pseudepigraphic letters usually circulated long after the death of the person the author claimed to be, and a date between A.D. 62 and 66 would allow insufficient time for this letter to be a pseudepigraphic composition.

James the Just. Josephus and some later Jewish-Christian writers reported the great esteem that fellow Jerusalemites, especially the poor, had for James. Non-Christian as well as Christian Jerusalemites admired his piety, but his denunciations of abuses by the aristocracy (as in 5:1-6) undoubtedly played a large role in the aristocratic priesthood's opposition to him. About the year A.D. 62, when the procurator Festus died, the *high priest Ananus II executed James and some other people. The public outcry was so great, however, that when the new procurator Albinus arrived, Ananus was deposed from the high priesthood over the matter (Josephus, *Jewish Antiquities* 20.200-203).

Genre. Greek writers, including Jewish writers enamored with Greek thought, often listed loosely related exhortations in a style called parenesis. Some modern writers have argued that James is this sort of work (some even view the letter as a *New Testament collection of proverbs), but they fail to observe the close literary connections running throughout the book. It may be that James or one of his followers has adapted his sermonic material into a letter, but the connectedness of the material demonstrates that the letter in its present form is a polished, unified work.

James reads more like an essay than a letter, but one kind of ancient letter in which moralists and skilled rhetoricians engaged was a "letter-essay," a general letter intended more to make an argument than to communicate greetings. Writers like *Seneca and Pliny sometimes used literary epistles of this sort, which were published and meant to be appreciated by a large body of readers (1:1). The messenger(s) who delivered it would presumably provide appropriate words of explanation; like letters from Jerusalem *high priests to Diaspora *synagogues, a letter from a respected leader in the Jerusalem church would carry much weight. The letter draws on Greco-Roman rhetorical conventions, Jewish wisdom and Jesus' teachings (especially as now found in Mt 5–7). Because its present form includes a brief epistolary introduction (Jas 1:1) this commentary will call James a "letter," though with the recognition that apart from that introduction it reads more like an essay.

Situation. Although James's teaching can apply to a variety of situations (and was probably so applied by the letter's Diaspora audience), this commentary can provide the most specific background by giving special attention to how the teachings would have applied concretely in James's immediate environment in Judea. This environment shaped the issues James had to address toward the end of his life. More than a century before this time, the Roman general Pompey had cut Judean territory and made many Jewish peasants landless; the exorbitant taxes of Herod the Great must have driven more small farmers out of business. In the first century, many peasants worked as tenants on larger, feudal estates (as elsewhere in the empire); others became landless day laborers in the marketplaces, finding work only sporadically (more was available in harvest season). Resentment against aristocratic landlords ran high in many parts of the empire, but nonpayment of

promised goods to them was hardly an option; a few landowners even had their own hit squads of hired assassins to deal with uncooperative tenants. The situation was less extreme in the cities, but even there the divisions were obvious (e.g., the aristocracy in Jerusalem's Upper City versus the poor living downwind of that city's sewers). When the aristocratic priests began to withhold tithe income from the poorer priests, their only means of support, economic tensions increased.

In Rome, grain shortages often led to rioting. Social and economic tensions in Palestine were contained longer but eventually yielded to violence. Pursuing peace with Rome through practical politics, the Jerusalem aristocracy became an object of hatred to *Zealots and other elements of resistance, who felt that God alone should rule the land. (Josephus, who wished to minimize the anti-Roman sentiment that prevailed in Judea just before the war, tried to marginalize the Zealots as a fringe group; but other evidence in his *narrative shows clearly that revolutionary sympathies in general were widespread.) Various outbreaks of violence eventually culminated in a revolt in A.D. 66, followed by a massacre of priests and the Roman garrison on the Temple Mount. Aristocratic and proletarian patriots clashed inside the city as Roman armies surrounded it, and in A.D. 70 Jerusalem fell and its temple was destroyed. The final resistance stronghold at Masada fell in A.D. 73.

Audience. James addresses especially Jewish Christians (and probably any other Jews who would listen) caught up in the sort of social tensions that eventually produced the war of A.D. 66–70 (see comment on Acts 21:20-22). Although the situation most explicitly fits James's own in Judea, it also addresses the kinds of social tensions that were spreading throughout the Roman world (1:1). During the Judean war of 66–70, Rome violently discarded three emperors in a single year (A.D. 69), and immediately after the Judean war resistance fighters continued to spread their views to Jews in North Africa and Cyprus. But as in the case of some other general epistles, this letter reflects especially the situation of the writer more than that of any potential readership elsewhere.

Argument. James addresses the pride of the rich (1:9-11; 2:1-9; 4:13-17), persecution by the rich (2:6-7; 5:6) and pay withheld by the rich (5:4-6). He also addresses those tempted to retaliate with violent acts (2:11; 4:2) or words (1:19-20, 26; 3:1-12; 4:11-12; 5:9). He responds with a call to wisdom (1:5; 3:14-18), faith (1:6-8; 2:14-26) and patient endurance (1:9-11; 5:7-11). Once understood in the context of the situation, his supposedly "disjointed" exhortations all fit together as essential to his argument.

Commentaries. Among commentaries with helpful background are Peter Davids, *The Epistle of James,* NIGTC (Grand Rapids: Eerdmans, 1982); Luke Timothy Johnson, *The Letter of James,* AB 37A (New York: Doubleday, 1995); Sophie Laws, *A Commentary on the Epistle of James,* HNTC (San Francisco: Harper & Row, 1980); Ralph P. Martin, *James,* WBC 48 (Waco, TX: Word, 1988); and Scot McKnight,

The Letter of James, NICNT (Grand Rapids: Eerdmans, 2011). On a less technical level, see also Peter Davids, *James* (Grand Rapids: Baker Academic, 1989). For more specialized works, see, e.g., Richard Bauckham, *James: Wisdom of James, Disciple of Jesus the Sage* (New York: Routledge, 1999); Ralph P. Martin, "The Life-Setting of the Epistle of James in the Light of Jewish History," in *Biblical and Near Eastern Studies: Essays in Honor of William Sanford LaSor,* ed. Gary A. Tuttle (Grand Rapids: Eerdmans, 1978), pp. 97-103.

1:1-11
How to Face Trials

In this opening section James introduces the major themes of his letter, by which he responds to the trials of poverty and oppression faced by many people in his day, including peasants in Judea and Galilee.

1:1. The three basic elements of a letter's introduction were (1) the author's name; (2) the name of the recipient(s); (3) a greeting (usually the same greeting as here). Because this work is, if a genuine letter of sorts, a "general letter" (cf. comment on "letter-essays" in the introduction to James under "*genre"), it proceeds immediately to the argument, without other epistolary features.

Because "James" is an English substitution for the original "Jacob" (as always in the *New Testament), some writers have surmised here a symbolic "Jacob" addressing the twelve tribes of Israel, as Jacob addressed his descendants in the testament in Genesis 49. This suggestion is often associated with the assumption of pseudonymity, but it is also possible that James would play on his own name. Plays on names were common (e.g., Mt 16:18). On the author and audience, see the introduction.

Most Jewish people believed that ten of the twelve tribes had been lost for centuries, and they would be restored only at the end of the age. They were thought to exist somewhere, however, so James's address may just mean, "To all my Jewish brothers and sisters scattered throughout the world." The "dispersion" or Diaspora included Jews in the Parthian as well as the Roman Empire, and James would meet Jews from many nations at the pilgrimage festivals to Jerusalem. Some commentators believe that he means the term symbolically for all Christians as spiritual Israelites, on the analogy of 1 Peter 1:1, but given the letter's contents, James probably particularly addresses Jewish Christians.

1:2. The specific trials he addresses in this letter are the poverty and oppression experienced by the poor (1:9-11; 5:1-6; cf. 2:5-6). Addresses like "friends," "beloved" and "brothers" were common in ancient moral exhortation; "brothers" was used both for "fellow countrymen" and for "fellow religionists."

1:3-4. Jewish tradition repeatedly stressed the virtue of enduring testings and occasionally stressed joy in them due to faith in God's sovereignty. (*Stoic philosophers also stressed contentment in them, because they affirmed that one could control one's response to them, but one could not control Fate.) Lists of vices and virtues were a conventional literary form.

1:5. Jewish wisdom traditions often stressed endurance and gave practical advice concerning how to deal with trials. The prime *Old Testament example of asking God (cf. 4:2-3) for wisdom is 1 Kings 3:5 and 9 (cf. also in the *Apocrypha: Wisdom of Solomon 8:21; 9:5; Sirach 51:13-14), and God was always recognized as its source (e.g., Prov 2:6). In Jewish wisdom, upbraiding or reproaching was considered harsh and rude under normal circumstances, although reproof was honorable.

1:6. The image of being driven on the sea was common in Greek literature and occurs in Jewish wisdom texts; cf. especially Isaiah 57:20 and the saying about the insincere in Sirach 33:2. In the context of James, asking for wisdom in faith means committing oneself to obey what God reveals (Jas 2:14-26).

1:7-8. Jewish wisdom texts condemn the double-minded or double-tongued person (cf. also 1 Chron 12:33; Ps 12:2); like philosophers, Jewish sages abhorred the hypocrisy of saying one thing and living another, and speaking or living inconsistently. (See comment on Jas 4:8 for the function of this warning in James.)

1:9-11. Wealthy landowners regularly exploited the poor throughout the empire, and Palestine was no exception; such economic tensions eventually provoked a war against Rome, in the course of which less well-to-do Jewish patriots slaughtered Jewish aristocrats.

The Old Testament and Jewish wisdom literature stress that riches fade, that God vindicates the oppressed and the poor in the end, and that he judges those who keep their wealth and do not share with the poor. James's final statement here resembles Isaiah 40:6-7 and Psalm 102:4, 11 and 16, although the idea was by this time common. The "scorching wind" (NASB) might refer to the sirocco, an especially devastating hot wind blowing into Palestine from the southern desert. But the summer sun by itself was also quite effective in wilting Palestinian flowers, which were then useless except as fuel.

1:12-18
The Source of Testings

1:12. James uses the beatitude form common in ancient literature, especially Jewish literature: "How happy is the person who . . . " Distresses were viewed as temptations, providing opportunities to sin. The term translated "trials" (NASB, GNT; cf. NIV) or "testing" did not necessarily mean "temptation" (KJV, NRSV) in the modern sense, however; the tester could be interested in the distressed person's perseverance, rather than his or her defeat. Famines, poverty and oppression were among events viewed as testings.

1:13-16. One point leading to another, yielding a list of multiple items (as here in 1:14-15; Rom 5:3-5; 2 Pet 1:5-7), was a *rhetorical form known as concatenation. God clearly "tested" people in the Bible and later Jewish literature (Gen 22:1; Deut 8:2; 13:3; Judg 2:22), but he never tested them in the sense that is implied here: seeking for them to fail instead of persevere. Jewish texts distinguished between God's motives in testing people (in love, seeking their good) and *Satan's motives in testing them (to make them fall). In most Jewish texts, Satan (also called Belial and Mastema) fills the role of tempter. Although James does not deny Satan's indirect role (4:7), he emphasizes here the human element in succumbing to temptation. Many scholars think that James personifies "desire" (NIV, NRSV, GNT) or "lust" (KJV, NASB) as enticing a person, then illegitimately conceiving the child "sin," which in turn brings forth "death"; Jewish teachers occasionally applied the rhetorical technique of personification to the "evil impulse" all people had.

That people "tested" God in the *Old Testament is also clear (Num 14:22; Ps 78:18, 41, 56; 95:9; Mal 3:15), but again these examples mean that they tried to put him to the test, not that they led him to *succumb* to temptation. James could adapt the term in the light of the Greek philosophical idea that God could not be affected or changed by human actions, nor could he cause evils in the world. But more likely James is simply working with a different nuance of the term for "test"; in the Old Testament God is clearly the direct cause of judgment (e.g., Amos 4:6-11), and he listened to human pleas (Gen 18:23-32; Ex 32:10-13). The meaning is thus as in Sirach 15:11-12 and 20: people choose to sin, and they dare not say that God is responsible for their response to testing (by contrast, Greek literature was full of people protesting that their temptation was too great to resist).

1:17. Rather than sending testing to break people (1:12-16), God sends good gifts, including creation or rebirth (v. 18). That God is author of everything good was a commonplace of Jewish and Greek wisdom. That what is in the heavens is perfect was a common belief in antiquity, and Jewish writers sometimes used "from above" to mean "from God."

"Father of lights" could mean "Creator of the stars"; *Gentiles often viewed the stars as gods, but Jewish people viewed the stars as angels. (Scholars suggest that Canaanites at Ugarit had long before called El the "Father of lights"; the *Dead Sea Scrolls call God's supreme angel "Ruler of lights." Various ancient Jewish texts call stars "the lights"—cf. Gen 1:14-19; Jer 31:35.) Ancient astronomers used words like "moving shadows" to describe the irregularities of heavenly bodies; but philosophers viewed what was perfect, what was in the heavens, as changeless and without direct contact with earth. Belief in astrology and fearing the powers of the stars were on the rise in this period. James is not supporting astrology; rather, like other Jewish writers, he is declaring God lord over the stars while denying God's inconsistency. To ancient readers his words could thus proclaim: testings are not the result of arbitrary fate; our lives are the faithful workings of a loving Father.

1:18. Whether he refers to believers' rebirth through the *gospel (cf. 1:21; 1 Pet 1:23; see comment on Jn 3:3, 5) or to humanity's initial creation by God's word (Gen 1:26) is disputed; "message of truth" and "firstfruits" may favor the former meaning (the beginning of the new creation). The point is clear either way: God's giving birth is contrasted with desire's giving birth (1:15), and it illustrates God's *grace toward people (1:17).

1:19-27
True Religion

James now turns to appropriate ways to *deal* with testing (1:2-18). The revolutionaries'

model, which was gaining popularity in Jewish Palestine and would ultimately lead to Jerusalem's destruction, was not the appropriate response. James condemns not only violent acts but also the violent *rhetoric that incites them.

1:19. These are by far some of the most common admonitions in Jewish wisdom, from Proverbs on (e.g., 14:29; 15:18; 16:32; 19:11); Greek parallels are no less easy to adduce. James contrasts this biblical and traditional wisdom with the spirit of revolution sweeping his land.

1:20. The militant Jewish resistance emphasized striking out at the Romans and their aristocratic vassals, supposing that they would be acting as agents of God's righteous indignation. But James associates righteousness with peace (3:18) and nonresistance (5:7).

1:21. "Wickedness" (NASB) in this context must refer to unrighteous anger (1:20); "meekness" (KJV) is the virtue of the nonresistant.

1:22. Receiving the word (1:21) meant more than hearing it; they had to live accordingly (1:19-20). (The proposal that "the ingrafted word" refers to the Stoic concept of "innate reason," using similar language, falters on this point: "innate" reason need not be "received.") Although most Jewish teachers (some disagreed) valued learning the *law above practicing it—because they held that practice depended on knowledge—they all agreed that both were necessary to fulfill the law. That one must not only know but must also obey truth was common moral wisdom (pervasive in ancient sources, e.g., Diodorus Siculus 9.9.1; Diogenes Laertius 6.2.64; **Letter of Aristeas* 127; Mishnah *Avot* 1:17; 3:17; 5:14; *Avot of Rabbi Nathan* 24 A), which the readers would not dispute. Hearing without obeying indicated self-delusion (cf. Ezek 33:30-32).

1:23-24. The best mirrors were of Corinthian bronze, but no mirrors of that period produced the accurate images available today (cf. 1 Cor 13:12). Those with enough resources to own mirrors used them when fixing their hair; if James alludes to such people, he portrays the forgetful hearer as stupid. Alternatively, he refers to many people who had no mirrors and saw themselves rarely, who might more naturally forget their own appearance. In this case the reference is to the ease with which one loses the memory of the word, if one does not work hard to put it into practice. (Some moralists recommended use of a mirror to emphasize moral reflection. Perhaps one who heard in the word how a new creation should live—1:18-20—but failed to practice it was forgetting what he or she had become. But the mirror analogy may imply only the quick forgetting of the word, as above.)

1:25. The mirror is an analogy for the law (as at least once in Philo; *Contemplative Life* 78), which was thought to bring liberty. Philosophers believed that true wisdom or knowledge freed them from worldly care; the liberty here, however, as in many Jewish sources, seems to be from sin (1:19-20). (On conceptions of freedom, see comment on Jn 8:33.)

1:26. James again (cf. 1:19) condemns uncontrolled speech, which would include recent impassioned denunciations of Roman rule likely to lead to violence.

1:27. In contrast to the violent and unruly religion of the Jewish revolutionaries, true religion involves defending the socially powerless (Ex 22:20-24; Ps 146:9; Is 1:17) and avoiding worldliness (i.e., the values and behavior of the world; see comment on 4:4). Orphans and widows had neither direct means of support nor automatic legal defenders in that society. Later Jewish sources suggest that at least in Judea, charity distributors tried to ensure that widows and orphans were cared for if they had no relatives to help them; such charity is also part of the visiting envisioned here. Greek society did look out for freeborn orphans, but not other ones. Jewish people visited the bereaved especially during the first week of their bereavement but also afterward, and they likewise visited the sick. Many Greco-Roman writers also valued visiting the sick and bereaved.

2:1-13
No Favoritism Toward the Wealthy

In Judea, as in most of the empire, the rich were oppressing the poor (2:6-7). But the temptation to make rich converts or inquirers feel welcome at the expense of the poor was immoral (2:4). The language of impartiality was normally applied especially to legal settings, but because *synagogues served both as houses of prayer and as community courts,

this predominantly legal image naturally applies to any gatherings there.

2:1. Jewish wisdom stressed that those who respected God should not show "favoritism" toward (literally "accept the face of") people. The title "Lord of glory" (KJV, NASB; it means "glorious Lord"—NIV, NRSV) was normally applied to God (e.g., in **1 Enoch*; cf. Ps 24:7-8).

2:2. Moralists and satirists mocked the special respect given to the wealthy, which often amounted to a self-demeaning way to seek funds or other help. Illustrations like this one could be hypothetical, which fit the writer's *diatribe style of argument. In Rome the senatorial class wore gold rings; some members of this class sought popular support for favors shown to various groups. But rings were hardly limited to them; in the eastern Mediterranean gold rings also marked great wealth and status. Clothing likewise distinguished the wealthy, who could be ostentatious, from others; many peasants had only one cloak, which would thus often be dirty (this was true at least in Egypt; but even two cloaks would wear thin).

"Assembly" (KJV, NASB, NRSV) or "meeting" (NIV, GNT) is literally "synagogue," either because James wants the whole Jewish community to embrace his example, or because some Jewish-Christian congregations (cf. 5:14) also considered themselves messianic synagogues.

2:3. Jewish legal texts condemn judges who make one litigant stand while another is permitted to sit; these hearings often took place in synagogues (2:2), which doubled as community centers. To avoid partiality on the basis of clothing, some second-century *rabbis required both litigants to dress in the same kind of clothes.

2:4. Roman laws explicitly favored the rich. Persons of lower class, who were thought to act from economic self-interest, could not bring accusations against persons of higher class, and the laws prescribed harsher penalties for lower-class persons convicted of offenses than for offenders from the higher class. Biblical *law, most Jewish law and traditional Greek philosophers had always rejected such distinctions as immoral. In normal times, the urban public respected the rich as public benefactors, although many of the revolutionaries recognized in the Jerusalem aristocracy pro-Roman enemies. The *Old Testament forbade partiality on the basis of economic status (Lev 19:15) and called judges among God's people to judge impartially, as God did.

2:5. For God hearing the cries of the poor, who were also the most easily judicially oppressed, cf. texts like Deuteronomy 15:9. One line of Jewish tradition stresses the special piety of the poor, who had to depend on God alone.

2:6. Roman courts always favored the rich, who could initiate lawsuits against social inferiors, although social inferiors could not hope to win lawsuits against them. In theory, Jewish courts sought to avoid this discrimination, but as in most cultures people of means naturally had legal advantages: they were usually able to argue their cases more articulately or to hire others to do so for them.

2:7. Judaism often spoke of "the sacred name" or used other expressions rather than using the name of God; James may apply this divine title to Jesus here (cf. 2:1). In the Old Testament, being "called by someone's name" meant that one belonged to that person in some sense; it was especially applied to belonging to God. Some of the Galilean aristocracy (such as those settled in Tiberias) were considered impious by general Jewish standards. But this accusation may apply specifically to anti-Christian opposition: much of the opposition Christians faced in Jerusalem came especially from the Sadducean aristocracy (Acts 4:1; 23:6-10).

2:8. A "royal" law, i.e., an imperial edict, was higher than the justice of the aristocracy, and because Judaism universally acknowledged God to be the supreme King, his law could be described in these terms (cf. *Philo, *Posterity of Cain* 102; *Life of Moses* 2.3-4). Christians could naturally apply it especially to Jesus' teaching; like some other Jewish teachers, Jesus used this passage in Leviticus 19:18 to epitomize the law (cf. Mk 12:29-34).

2:9-10. Jewish teachers distinguished "heavier" from "lighter" sins, but felt that God required obedience to even the "smallest" commandments (e.g., Mishnah *Avot* 2:1; 4:2; Mishnah *Qiddushin* 1:10; *Sifre Deuteronomy* 76.1.1), rewarding the obedient with *eternal life and punishing transgressors with damnation. That willful violation of even a minor transgression was tantamount to rejecting the

whole law was one of their most commonly repeated views (e.g., R. Meir in Babylonian Talmud *Bekhorot* 30a). (Ancient writers often stated principles in sharp, graphic ways but in practice showed more mercy to actual transgressors in the community.)

Traditional *Stoics (against the *Epicureans) went even farther in declaring that all sins were equal (e.g., *Epictetus, *Discourses* 2.21.1-7), a Stoic view widely known even among non-Stoics (e.g., *Cicero, *On the Ends* 4.27.74-75; Pliny, *Epistles* 8.2.3; Diogenes Laertius 7.1.120). Some Jewish writers agreed: rejecting the smallest commandment was equal to rejecting the largest, because in either case one rejected God's law (*4 Maccabees 5:19-21). The point here is that rejecting the law of economic impartiality in Leviticus 19:15, or the general principle of love behind it (Lev 19:18), was rejecting the whole authority of God (Jas 2:8). Jewish teachers often used "stumbling" as a metaphor for sin.

2:11. Jewish tradition sometimes compared oppression of the poor with murder (cf. also 5:6). But James might here allude to religiously conservative revolutionaries, too religious to commit adultery, who would nevertheless not scruple at shedding the blood of Jewish aristocrats. At the time this letter was written, these "assassins" were regularly stabbing aristocrats to death in the temple (see comment on Acts 21:20-22).

2:12. Ancients could summarize a person's behavior in terms of words and deeds; see comment on 1 John 3:18. Some scholars have pointed out that many philosophers believed themselves alone wise, free and kings, and they connect "law of liberty" here with "royal law" in 2:8. Jewish teachers believed that the law of the heavenly king freed one from the yoke of this world's affairs. "Law of freedom," as in 1:25, probably implies deliverance from sin.

2:13. James's point here is that if his readers are not impartial judges, they will answer to the God who is an impartial judge; his impartiality in judgment is rehearsed throughout the Old Testament and Jewish tradition. Jewish teachers defined God's character especially by two attributes, mercy and justice, and suggested that mercy normally won out over justice. They would have agreed with James that the merciless forfeited a right to mercy, and they had their own sayings similar to this one.

2:14-26
Faith Must Be Lived Out

James could be reacting partly against a misinterpretation of Paul's teaching, as some commentators have suggested, but even more he might react especially against a strain of Jewish piety that was fueling the revolutionary fervor that was leading toward war (cf. 1:26-27; 2:19). James uses words like "faith" differently from the way Paul does, but neither writer would be opposed to the other's meaning: genuine faith is a reality on which one stakes one's life, not merely passive assent to a doctrine. For James, expressions of faith like nondiscrimination (2:8-9) and nonviolence (2:10-12) must be lived, not merely acknowledged.

2:14-16. God commanded his people to supply the needs of the poor (Deut 15:7-8); to fail to do so was disobedience to his *law. "Go in peace" was a Jewish farewell blessing, but Jewish people were expected to show hospitality to other Jewish people in need. "Be warmed" (NASB) alludes to how cold the homeless could become (especially relevant in a place of high elevation like Jerusalem in winter). Moralists often used such straw examples ("if someone should claim") as part of their argument; the reader is forced to admit the logical absurdity of the conclusion of a particular line of reasoning and to agree with the author's argument. Jewish people held Abraham to be the ultimate example of such hospitality (cf. 2:21-23 and comment on 13:2).

2:17. Writers such as *Epictetus could use "dead" the same way as here; this is a graphic way of saying "useless" (see comment on 2:26).

2:18. "Someone will say" was a common way to introduce the speech of an imaginary opponent, the answer to whose objection merely furthered the writer's argument. The force of the objection is "One may have faith, and another works"; the answer is "Faith can be demonstrated only by works." "Show me" was a natural demand for evidence and appears in other moralists (e.g., Epictetus, *Discourses* 1.4.13; 1.11.8; 3.24.75).

2:19-20. The oneness of God was the basic confession of Judaism, recited daily in the

Shema (Deut 6:4 and associated texts). Thus by "faith" James means monotheism, as much of Judaism used the term (*'emunah*). He thus says, "You acknowledge correct basic doctrine—so what? That is meaningless by itself." That *demons recognized the truth about God and trembled before his name was widely acknowledged, even in the magical *papyri (which specialized in what from a biblical perspective was illicit demonology; cf. also **1 Enoch*). Jewish teachers would have agreed with James that the oneness of God must be declared with a genuine heart; his oneness implied that he was to be the supreme object of human affection (Deut 6:4-5).

2:21-24. James connects Genesis 15:6 with the offering of Isaac (Gen 22), as in Jewish tradition. This event was the climax of Abraham's faith in God, not only in Jewish tradition but in the Genesis *narrative itself. (God entered into covenant with Abraham's descendants because he loved him and made a promise to him—Deut 7:7-9—which Abraham embraced in faith and thus obeyed; God accepted this obedient faith—Gen 26:4-5. This view was not quite the same as the second-century rabbinic view that God parted the Red Sea on account of the merits of the patriarchs, but neither is it the same as one common modern conception that faith is a once-for-all prayer involving no commitment of life or purpose and is efficacious even if quickly forgotten.)

Abraham was "declared righteous" at the *Aqedah,* the offering of Isaac, in the sense that God again acknowledged (Gen 22:12) Abraham's prior faith, which had been tested ultimately at this point. The *Old Testament called Abraham God's friend (2 Chron 20:7; Is 41:8), and later Jewish writers delighted in this title for him. Abraham's initial faith exhibited in Genesis 12 and 15 was incomplete (cf. Gen 16) but matured further over the years as part of a living relationship with God.

2:25. Like the example of Abraham, the example of Rahab would not be controversial among James's Jewish readers. Like Abraham (see comment on 2:14-16), Rahab was known for hospitality; but her act of saving the spies saved her as well (Josh 2:1-21; 6:22-25).

2:26. Most ancient people, including most Jewish people, accepted the necessary cooperation of body and spirit or soul; all who believed in the spirit or soul agreed that when it departed, the person died.

3:1-12
The Violent Tongue

James now returns to his warnings against inflammatory speech (1:19, 26): one ought not to curse people made in God's image (3:9-12).

3:1. Jewish sages also warned against teaching error and recognized that teachers would be judged strictly for leading others astray. Some who wanted to be teachers of wisdom were teaching the sort of "wisdom" espoused by the Jewish revolutionaries, which led to violence (3:13-18).

3:2. That everyone sinned was standard Jewish doctrine; that one of the most common instruments of sin and harm was the human mouth was also a Jewish commonplace (as early as Proverbs, e.g., Prov 11:9; 12:18; 18:21).

3:3-4. Controlling horses with bits and ships with rudders were common illustrations in the ancient Mediterranean, because everyone except the most illiterate peasants (who would also miss many of the other allusions if they heard James read) understood them. Jewish texts often cast wisdom, reason and God in the role of ideal pilots, but James's point here is not what *should* control or have power. His point is simply the power of a small instrument (v. 5).

3:5-6. Others also compared the spread of rumors to the igniting of what would rapidly become a forest fire. Here the image is that of a tongue that incites the whole body to violence. The boastful tongue plotting harm (Ps 52:1-4) and the tongue as a hurtful fire (Ps 39:1-3; 120:2-4; Prov 16:27; 26:21; Sirach 28:21-23) are old images. That the fire is sparked by "hell" suggests where it leads; Jewish pictures of *Gehenna, like Jesus' images for the fate of the damned, typically included flame.

3:7-8. Made in God's image (v. 9), people were appointed over all creatures (Gen 1:26). But although other creatures could be subdued as God commanded (Gen 1:28; 9:2), the tongue was like the deadliest snake, full of toxic venom (Ps 140:3; cf. 58:1-6; 1QHa 13.29 in the *Dead Sea Scrolls; and other Jewish texts). *Stoic philosophers also occasionally reflected on humanity's rule over animals.

3:9-10. Some other Jewish teachers also noted the incongruity of blessing God while cursing other people, who were made in his image; even more often, they recognized that whatever one did to other humans, it was as if one did it to God himself, because people were made in his image. James's readers could not easily miss his point. This text makes clear the sort of perverse speech that 3:1-12 addresses: antagonistic speech, which fits the situation the letter as a whole addresses. Whether by incendiary *rhetoric or in other ways, cursing mortal enemies was incompatible with worshiping God, no matter how embedded it had become in Jewish patriotic tradition (since the Maccabean era).

3:11-12. James produces two other common examples of impossible incongruity. Figs, olives and grapes were the three most common agricultural products of the Judean hills, and alongside wheat and barley they would have constituted the most common crops of the Mediterranean region as a whole. That everything brought forth after its kind was a matter of common observation and became proverbial in Greco-Roman circles (cf. also Gen 1:11-12, 21, 24-25).

3:13-18
Peaceable Versus Demonic Wisdom

The paradigm of violent retaliation, urged by *Zealots and other Jewish revolutionaries, claimed to be religious and wise; James urges the poor to respond by waiting on God instead (5:7-11). That James was wiser than advocates of revolution was proved in the aftermath of the Judean revolt of A.D. 66–70, when Judea was devastated, Jerusalem destroyed and Jerusalem's survivors enslaved.

3:13. Those who wished to teach others as wise sages (3:1) needed to show their wisdom by gentleness: this is the antithesis of the advocates of revolution, who were gaining popularity in the tensions stirred by poverty and oppression in the land.

3:14. The term translated "jealousy" (NASB) or "envy" (NIV, NRSV) here is the term for "zeal" also appropriated by the Zealots, who fancied themselves successors of Phinehas (Num 25:11; Ps 106:30-31) and the *Maccabees and sought to liberate Jewish Palestine from Rome by force of arms. "Strife" (KJV; "selfish ambition"—NASB, NIV, NRSV) also was related to disharmony and had been known to provoke wars.

3:15-16. "Above" was sometimes synonymous with "God" in Jewish tradition; as opposed to heavenly wisdom, the wisdom of violence (3:14) was thoroughly earthly, human and demonic (cf. similarly Mt 16:22-23). The *Dead Sea Scrolls spoke of sins as inspired by the spirit of error (1QS 3.25-26; 4.9) or spirits of Belial (CD 12.2), and folk Judaism increasingly believed that people were continually surrounded by hordes of *demons. James's words suggest a more indirect working of demons through stirring up their own ungodly values in the world system.

3:17. Wisdom "from above," i.e., from God (1:17; 3:15), is "pure," not mixed with anything else (in this case, not mixed with demonic wisdom—3:14-16); it is thus also "unhypocritical." Many Jewish wisdom texts spoke of divine wisdom coming from above. God's genuine wisdom is nonviolent rather than given to lashing out: "peaceable," "gentle," "open to reason," "full of mercy" (cf. 2:13); it was also "unwavering" (NASB), better rendered "impartial" (NIV), or "without prejudice or favoritism" (cf. 2:1-9). In Judea, such wisdom is neither that of those like *Zealots nor of those supporting the aristocracy.

3:18. The image of virtues as seeds and fruits has many parallels (e.g., Prov 11:18; Is 32:17), but James's point in the context is this: true wisdom is the wisdom of peace, not of violence. Although many Pharisaic teachers extolled peace, many populists were advocating violence, and James's message was in many regards countercultural.

4:1-12
Choose Between God and the World's Values

God's wisdom was not the populist wisdom of the revolutionaries (3:13-18); thus those whose faith was genuine (2:14-26) could not waver between the two options. James addresses here many of the poor, the oppressed, who are tempted to try to overthrow their oppressors and seize their goods.

4:1. Most Greco-Roman philosophers and many *Diaspora Jews repeatedly condemned people who were ruled by their passions, and

described these desires for pleasure as "waging war." Many writers like *Plato, *Plutarch and *Philo attributed all literal wars to bodily desires. In a somewhat similar vein, Jewish people spoke of an evil impulse, which according to later *rabbis dominated all 248 members of the body.

4:2. *Diatribe often included *hyperbole, or graphic, rhetorical exaggeration for effect. Most of James's readers have presumably not literally killed anyone, but they are exposed to violent teachers (3:13-18) who regard murder as a satisfactory means of attaining justice and redistribution of wealth. James counsels prayer instead. Later he has much harsher words for the oppressors, however; they were guilty of exploiting their hungry workers and violently silencing those who spoke for justice (cf. 5:1-6).

4:3. Jewish prayers typically asked God to supply genuine needs; see comment on Matthew 6:11. James believes that such prayers will be answered (cf. Prov 10:24), even though the oppressed will always be worse off than they should be (cf. Prov 13:23). But requests based on envy of others' wealth or status were meant to satisfy only their passions (see comment on 4:1).

4:4. In the *Old Testament, Israel was often called an adulteress for claiming to serve God while pursuing idols (e.g., Hos 1–3). Those who claimed to be God's friends (Jas 2:23) but were really moral *clients of the world (friendship often applied to *patron-client relationships)—that is, they shared the world's values (3:13-18)—were really unfaithful to God.

4:5. Here James may refer to the evil impulse that, according to Jewish tradition, God made to dwell in people; on this reading, he is saying, "This human spirit jealously longs," as in 4:1-3. Less likely, he could mean that one's spirit or soul longs and ought to long—but for God (Ps 42:1-2; 63:1; 84:2).

A third possibility is that he may be citing a proverbial maxim based on such texts as Exodus 20:5, Deuteronomy 32:21 and Joel 2:18, summarizing the sense of Scripture thus: "God is jealous over the spirit he gave us" and will tolerate no competition for its affection (4:4). (Like Jewish writers, *New Testament authors sometimes *midrashically meshed various texts together.) This view seems to fit the context somewhat better than other views, given that Scripture did not speak this "in vain" (4:5), though the "greater *grace" of 4:6 could support the first view above.

4:6. James cites Proverbs 3:34 almost exactly as it appeared in the common form of the *Septuagint. This idea became common in Jewish wisdom texts. Humility included appropriate submission, in this case to God's sovereign plan for a person's life (4:7, 10).

4:7. Ancient magical texts spoke of *demons' fleeing before incantations, but the idea here is moral, not magical. One must choose between the values of God and those of the world (4:4), between God's wisdom and that which is demonic (3:15, 17). The point is that a person who lives by God's values (in this case, his way of peace) is no part of *Satan's *kingdom (in contrast to the religious-sounding revolutionaries).

4:8. Old Testament texts exhorted priests and people in general to "draw near to God." Purification was also necessary for priests (Ex 30:19), but the image here is not specifically priestly; those responsible for bloodshed, even if only as representatives of a corporately guilty group, were to wash their hands (Deut 21:6; cf. Jas 4:2). "Purification" often came to be used in an inward, moral sense (e.g., Jer 4:14).

Using ideas like "sinners," James employs not only the harsh diatribe rhetoric that Greco-Roman writers used against imaginary opponents when demolishing their positions; he also uses the rhetoric of Old Testament prophets. "Double-minded" again alludes to the general ancient contempt for hypocrisy: one must act from either God's peaceful wisdom or the devil's hateful wisdom (3:13-18; 4:4).

4:9-10. Old Testament texts often connected mourning and self-humiliation with *repentance (Lev 23:29; 26:41), especially when confronted by divine judgment (2 Kings 22:11; Joel 1:13-14; 2:12-13). The exaltation of the humble was also a teaching of the prophets; see comment on Matthew 23:12.

4:11. James returns to the specific worldly behavior his readers are following: harsh and even violent speech (3:1-12). (He either addresses social stratification within the Christian community or, more likely, uses "brothers" in its more common Jewish sense of "fellow Jews." Jewish revolutionaries had already begun killing aristocrats, and inflam-

matory rhetoric was certainly even more common.) His general principle was standard Old Testament and Jewish wisdom opposing slander, which many of his readers may not have been considering in this context. The *law declared God's love for Israel and commanded his people to love one another (2:8); to slander a fellow Jew was thus to disrespect the law.

4:12. That God alone was the true judge was a common Jewish and New Testament teaching. In Jewish teaching, earthly courts proceeded only on his authority, and those who ruled in them had to judge by the law. Investigations had to be conducted thoroughly, with a minimum of two witnesses; acting as a false witness, slandering someone to a court without genuine firsthand information, was punishable according to the judgment the falsely accused person would have received if convicted.

4:13-17
The Pride of the Rich

Having counseled the oppressed, James quickly turns to the oppressors, denouncing their self-satisfied forgetfulness of God. Most of the wealth in the Roman Empire was accumulated by one of two means: the landed gentry, of high social class, made their wealth from land-based revenues such as crops raised by tenant farmers or slaves; the merchant class gathered great wealth without the corresponding social status. James addresses both merchants (4:13-17) and the landed aristocracy (5:1-6).

4:13. Many philosophers (especially *Stoics) and Jewish sages liked to warn their hearers that they had no control over the future. "Go now" (5:1) was a fairly common way of proceeding with an argument (e.g., Athenaeus), addressing an imaginary opponent (e.g., *Cicero, *Epictetus) or prefacing harsh words in satire (Horace, *Juvenal).

The primary markets for manufactured goods were towns and cities; projecting commitments and profits was also a normal business practice. Traders were not always wealthy, but here they are at least *seeking* wealth. The sin here is arrogant presumption—feeling secure enough to leave God out of one's calculations (4:16; cf., e.g., Jer 12:1; Amos 6:1).

4:14. Here James offers common Jewish and Stoic wisdom to which few readers would theoretically object, although many were undoubtedly not heeding it.

4:15-17. "If God wills" was a conventional Greek expression (e.g., Xenophon, *Hellenica* 2.4.17; 5.1.14) but fit Jewish piety well (cf., e.g., *Josephus, *Jewish Antiquities* 2.333; 7.373; 20.267); it appears elsewhere in the New Testament (e.g., Acts 18:21; see comment on 1 Cor 16:7).

5:1-6
Judgment on Wealthy Oppressors

Throughout most of the rural areas of the Roman Empire, including much of rural Galilee, rich landowners profited from the toil of tenant farmers (often alongside slaves) who worked their massive estates. That feudalism, with its serfs working rich landowners' property, arose only in medieval times is a misconception. This arrangement is simply less prominent in literature of Roman times because Roman literature concentrated on the cities, although only about ten percent of the empire is estimated to have been urban.

Most of James's denunciation takes the form of an *Old Testament prophetic judgment oracle, paralleled also in some Jewish wisdom and *apocalyptic texts. The difference between his denunciation of the rich and the violent speech he himself condemns (1:19, 26; 3:1-12; 4:11) is that he (like some Jewish visionaries of his era) appeals to God's judgment rather than to human retribution (4:12; cf. Deut 32:35; Prov 20:22). His *prophecy was timely; a few years later the Jewish aristocracy was virtually obliterated in the revolt against Rome.

5:1. Exhortations to weep and howl were a graphic prophetic way of saying: You will have reason to weep and howl (Joel 1:8; Mic 1:8; cf. Jas 4:9). On "come," see comment on 4:13.

5:2. Clothing was one of the primary signs of wealth in antiquity; many peasants had only one garment.

5:3. Some other ancient writers ridiculed the rust of unused, hoarded wealth. For "rust" and "moth" (v. 2) together, compare perhaps Matthew 6:19. As Jewish sources often noted, wealth would be worthless in the impending day of God's judgment.

5:4. The *law of Moses forbade withholding wages, even overnight; if the injured worker cried out to God, God would avenge him (Deut 24:14-15; cf., e.g., Lev 19:13; Prov 11:24; Jer 22:13; Mal 3:5). That the wrong done the oppressed would itself cry out to God against the oppressor was also an Old Testament image (Gen 4:10). In first-century Palestine, many day laborers depended on their daily wages to purchase food for themselves and their families; withholding money could mean that they and their families would go hungry.

The income absentee landlords received from agriculture was such that the wages they paid workers could not even begin to reflect the profits they accumulated. Although the rich supported public building projects (in return for attached inscriptions honoring them), they were far less inclined to pay sufficient wages to their workers. At least as early as the second century, Jewish teachers suggested that even failing to leave gleanings for the poor was robbing them (based on Lev 19:9-10; 23:22; Deut 24:19).

Most crops were harvested in or near summer, and extra laborers were often hired for the harvest. Many *Diaspora Jewish texts (literary texts, amulets, etc.) called God "Sabaoth" or "Lord of Sabaoth," transliterating the Hebrew word for "hosts": the God with vast armies (an epithet especially prominent in the *LXX of Isaiah). If it was a bad idea to offend a powerful official, it was thus a much worse idea to secure the enmity of God.

5:5. The rich and their guests consumed much meat in a day of slaughter, i.e., at a feast (often at sheep-shearing or harvest; cf. 1 Sam 25:4, 36); once an animal was slaughtered, as much as possible was eaten at once, because the rest could be preserved only by drying and salting. Meat was generally unavailable to the poor except during public festivals.

The picture here is of the rich being fattened like cattle for the day of their own slaughter (cf., e.g., Jer 12:3; Amos 4:1-3); similar imagery appears in parts of the early apocalyptic work **1 Enoch* (94:7-11; 96:8; 99:6). As often in the Old Testament (e.g., Amos 6:4-7), the sin in verse 5 is not exploitation per se (as in v. 4) but a lavish lifestyle while others go hungry or in need.

5:6. Jewish tradition recognized that the wicked plotted against the righteous (e.g., Wisdom of Solomon 2:19-20), as the sufferings of many Old Testament heroes (such as David and Jeremiah) showed. Judicial oppression of the poor, repeatedly condemned in the Old Testament, was viewed as murder in later Jewish texts; to take a person's garment or to withhold a person's wages was to risk that person's life. James "the Just" himself was later martyred by the *high priest for his denunciations of the behavior of the rich.

5:7-12
Endure Until God Vindicates

The oppressors would be punished (5:1-6), but the oppressed have to wait on God (cf. 1:4) rather than take matters violently into their own hands. This exhortation did not mean that they could not speak out against injustice (5:1-6); it only forbade violence and personally hostile speech (5:9) as an appropriate solution to injustice.

5:7-8. Harvest here (cf. v. 4) becomes an image of the day of judgment, as elsewhere in Jewish literature (especially **4 Ezra*; Mt 13). Palestine's autumn rains came in October and November, and winter rains (roughly three-quarters of the year's rainfall) in December and January. But residents of Syria-Palestine eagerly anticipated the late rains of March and April, which were necessary to ready their late spring and early summer crops. The main wheat harvest there ran from mid-April through the end of May; the barley harvest was in March. The main grain harvest came in June in Greece, July in Italy. Farmers' families were entirely dependent on good harvests; thus James speaks of the "precious" (or "valuable"—NIV) fruit of the earth.

5:9. On this kind of speech, see comment on 4:11-12.

5:10. Most *Old Testament prophets faced great opposition for their preaching; some faced death. Jewish tradition had amplified accounts of their martyrdom even further, hence no one would dispute James's claim. Virtuous examples were an important part of ancient argumentation (*Stoic philosophers often used like-minded sages as models of endurance).

5:11. The entire structure of the book of Job may have been meant to encourage Israel after

the exile; although God's justice seemed far away and they were mocked by the nations, God would ultimately vindicate them and end their captivity (cf. the Hebrew of Job 42:10). *Hellenistic Jewish tradition further celebrated Job's endurance (e.g., the **Testament of Job,* and Aristeas the Exegete). (Various later *rabbis evaluated him differently, some positively, some negatively. The *Testament of Job* includes Stoic language for the virtue of endurance and transfers some earlier depictions of Abraham to Job; this transferral may have been the source of one later rabbi's rare conclusion that Job was greater than Abraham.)

5:12. Oaths were verbal confirmations guaranteed by appeal to a divine witness; violation of an oath in God's name broke the third commandment (Ex 20:7; Deut 5:11). Like some groups of Greek philosophers, some kinds of *Essenes would not swear any further oaths after they had completed their initiatory oaths (according to *Josephus, *Jewish War* 2.135, in contrast to the Essenes who wrote the *Dead Sea Scrolls); the *Pharisees, however, allowed oaths. On swearing by various items as lesser surrogates for God, see comment on Matthew 5:33-37. Oaths generally called on the gods to witness the veracity of one's intention and had to be kept, or invited a curse on the one who had spoken the untruth. Vows were a more specific category of oaths to undertake some duty or abstain from something for a particular period of time.

The difficulty is ascertaining what sort of swearing is in view in the context. Some scholars have suggested a warning against taking a *Zealot-type oath (cf. Acts 23:12); while this could fit the context of James very well, his readers may not have recognized something so specific. The idea may be that one should not impatiently (5:7-11) swear; rather one should pray (5:13). One should pray rather than swear because the fullest form of an oath included a self-curse, which was like saying "May God kill me if I fail to do this" or (in English preadolescent idiom) "Cross my heart and hope to die."

5:13-20
Depending on God

5:13. Nonresistance did not mean pretending that things did not matter (as the *Stoics did; see comment on Eph 5:20) or simply waiting unconsoled until the end time (as some Jewish *apocalyptic writers may have done); it meant prayer.

5:14. Wounds were anointed with oil (cf. Is 1:6; Lk 10:34), and those with headaches and those wishing to avoid some diseases were anointed with olive oil for "medicinal" purposes (from the ancient perspective; cf. Josephus, *Jewish Antiquities* 17.172; *Jewish War* 1.657). Oil was also used to anoint priests or rulers, pouring oil over the head as a consecration to God. Christians may have combined a symbolic medicinal use with a symbol of handing one over to the power of God's *Spirit (Mk 6:13).

A general prayer for healing was one of the blessings regularly recited in *synagogues; on "elders," see comment on Acts 14:23; on "*church" in a Jewish context, see the glossary. Visiting the sick was an act of piety in early Judaism that Christians probably continued (cf. Mt 25:36, 43, for ailing missionaries).

5:15-16. The *Old Testament prophets often used healing from sickness as an image for healing from sin, and Jewish literature often associated sin and sickness; for instance, the eighth blessing of a Jewish daily prayer, for healing (although the emphasis is not physical healing), followed petitions for forgiveness and redemption. James does not imply a direct causal relationship between *all* sickness and sin, any more than Paul or the Old Testament does (see comment on Phil 2:25-30).

Jewish wisdom also recognized that God would hear the sick (Sirach 38:9) and connected this hearing with renouncing sin (38:10). But although only a very few pious Jewish teachers were normally thought able to produce such assured results in practice (cf. Jas 5:17-18), James applies this possibility of praying with faith to all believers.

5:17-18. Although all Palestinian Jews prayed for rain, few miracle workers were thought able to secure such answers to prayer (especially Josephus's Onias, called Honi the Circle-Drawer in the many later rabbinic traditions about him; Hanina ben Dosa, in later rabbinic texts; in later traditions about earlier pietists, occasional pious men like Honi's grandson Abba Hilkiah or Hanan ha-Nehba, Johanan ben Zakkai, Nakdimon ben Gorion,

Rabbi Jonah and occasionally an anonymous person). The miracle of securing rain eventually came to be viewed as equivalent to raising the dead. The piety of these miraculous rainmakers always set them apart from others in Jewish tradition, but here James affirms that Elijah, the greatest model for such miracle workers, was a person like James's hearers and is a model for all believers (1 Kings 17:1; 18:41-46; cf. 1 Sam 12:17-18; for Elijah's weakness cf. 1 Kings 19:4).

The "three and a half years," not mentioned in 1 Kings 17, reflects 1 Kings 18:1 and later tradition (cf. Lk 4:25 and a rabbinic tradition of three years), perhaps through associations with ideas about famines in the end time, which were sometimes held to last for this period of time.

5:19-20. In Jewish belief, the former righteousness of one who turned away was no longer counted in his or her favor (Ezek 18:24-25), but (in most Jewish formulations) the *repentance of the wicked canceled out his or her former wickedness (Ezek 18:21-23), if conjoined with proper *atonement. Some Jews (Dead Sea Scrolls, some rabbis) regarded some forms of apostasy as unforgivable, but James welcomes the sinner back. In this context, he might among other things invite revolutionaries to return to the fold.

"Covering a multitude of sins" comes from Proverbs 10:12. In that text, it probably refers to not spreading a bad report (cf. 11:13; 20:19), but Judaism often used similar phrases for securing forgiveness. One may compare the Jewish idea that one who converted another to the practice of Judaism was as if he or she had created that person.

1 Peter

Introduction

Authorship. Although some commentators question Petrine authorship, others have argued forcefully for it; the situation presupposed in the letter fits Peter's lifetime. The tradition of Peter's martyrdom in Rome is virtually unanimous. By the late first century 1 Clement accepted this tradition, and excavations indicate a second-century memorial in Rome to Peter's martyrdom. Other early Christian traditions also support this tradition as well as the view that Peter was the author of the letter, which is cited by authors from the beginning of the second century.

Given this tradition of his martyrdom in Rome, the likelihood that letters he wrote would be preserved, and the fact that most letters were either authentic or written long after the purported author's death, the burden of proof is on those who deny that Peter wrote the letter. One commentator (Selwyn) thought he could detect parallels to Silas's (5:12) style in 1 and 2 Thessalonians. This argument alone is not conclusive, but arguments against Petrine authorship are even weaker (for those based on Greek style, see introduction to James).

Date. Three basic periods of persecution have been suggested as the background: the time of Trajan (early second century), the time of Domitian (see introduction to Revelation) and the time of Nero, which would be the time of Peter's martyrdom. First Peter implies an atmosphere of severe repression, but not the official court prosecutions of Trajan's time. Church leadership in the epistle (5:1-2) also fits the first-century model better than a later date. A pseudonymous letter attributed to Peter as early as the Flavian period (after Nero but still first century) is unlikely.

Unity. The first section of 1 Peter (1:1–4:6) does not explicitly indicate that fatal persecution has begun; the second part (4:7–5:14) is more explicit. Some writers have therefore divided the letter into two parts, usually arguing that the former was a baptismal homily (due to abundant parallels with other parts of the *New Testament). But the difference of situation presupposed between the two sections is not significant enough to warrant such a division, and there appear no other compelling reasons to divide them.

Provenance and Audience. It is widely agreed that "Babylon" (5:13) is a cryptic

name for Rome (linked early in Jewish views on the four kingdoms), as in some Jewish works and undoubtedly in the book of Revelation. The situation of persecution described here fits Rome, and it would be appropriate for Peter to send advance warning of that situation to believers in Asia Minor, the stronghold of emperor worship. An audience in Asia Minor would probably include Jewish Christians, but Peter's audience probably includes *Gentile Christians (cf. 1:18; 4:3-4).

Situation. A fire devastated Rome in A.D. 64 but suspiciously left unscathed the estates of Nero and his older boyfriend Tigellinus. Like any good politician, Nero needed a scapegoat for his ills, and what appeared to be a new religion, understood as a fanatical form of Judaism begun by an executed teacher three and a half decades before, filled the need perfectly.

Romans viewed Christians, like Jews, as antisocial. Certain charges became so common that they were stereotypical by the second century: Romans viewed Christians as "atheists" (like some philosophers, for rejecting the gods), "cannibals" (for claiming to eat Jesus' "body" and drink his "blood") and incestuous (for statements like "I love you, brother," or "I love you, sister"). Judaism was a poor target for outright persecution, because its adherents were numerous and it was popular in some circles; further, Nero's mistress, Poppaea Sabina, was a *patron of Jewish causes. By contrast, Christianity was viewed as a form of Judaism whose support was tenuous even in Jewish circles, and therefore it offered an appropriate political scapegoat.

According to the early-second-century historian *Tacitus (*Annals* 15.44), who disliked Christians himself, Nero burned Christians alive as torches to light his gardens at night. He killed other Christians in equally severe ways (e.g., feeding them to wild animals for public entertainment). In all, he may have murdered thousands of Rome's Christians, although most Christians there escaped his grasp. Thus, even though the Greek part of the empire loved Nero, Christians saw him as a prototype of the antichrist. Nero died in disgrace several years later, pursued by fellow Romans who hated him.

Genre. First Peter appears to be a general letter, influenced more by the situation in Rome than by the current situation in Asia Minor (what is now western Turkey); thus Peter can address it as a circular letter to many regions of Asia Minor (1:1). Peter does, however, seem to expect that the sufferings of Rome will eventually materialize in other parts of the empire. On events in Asia Minor three decades later, see the discussion of background in the introduction to Revelation. Leaders of the Jerusalem priesthood sent out encyclicals, letters to *Diaspora Jewish communities, by means of messengers; Peter's letter is similar to these but on a smaller scale of readership.

Commentaries. One of the most helpful for those who do not work with the Greek text is J. N. D. Kelly, *A Commentary on the Epistles of Peter and Jude* (reprint, Grand Rapids: Baker Book House, 1981). More technical works that are helpful for

background include Peter H. Davids, *The First Epistle of Peter,* NICNT (Grand Rapids: Eerdmans, 1990); John H. Elliott, *1 Peter,* AB 37B (New York: Doubleday, 2000); Karen H. Jobes, *1 Peter,* BECNT (Grand Rapids: Baker Academic, 2005); J. R. Michaels, *1 Peter,* WBC 49 (Waco, TX: Word, 1988); and E. G. Selwyn, *The First Epistle of St. Peter,* 2nd ed. (New York: Macmillan, 1947). Two of the best specialized works are David L. Balch, *Let Wives Be Submissive: The Domestic Code in 1 Peter,* SBLMS 26 (Chico, CA: Scholars, 1981), and William J. Dalton, *Christ's Proclamation to the Spirits: A Study of 1 Peter 3:18-4:6,* Analecta Biblica 23 (Rome: Pontifical Biblical Institute, 1965).

1:1-12
Present Testing, Future Hope

Verses 3-12 constitute one long sentence in Greek; such long sentences could be viewed as skillful in antiquity, when hearers of speeches were accustomed to following the train of thought for a longer time than North American and some other television-trained readers are today.

1:1. Jewish people spoke of Jews who lived outside Palestine as the "*Diaspora," or those who were "scattered"; Peter transfers this term to his audience (cf. 1:17; 2:11). On "resident aliens," see comment on 1:17; cf. 2:11. The five Roman provinces he mentions were geographically connected; he omits the southern coastal regions of Asia Minor, some of which could be grouped with Syria in this period instead of as a political part of Asia Minor. It has been suggested that the sequence in which Peter lists the provinces of his intended readers reflects the route a messenger delivering the letter could take if he started from Amastris in Pontus. (Although messengers from Rome were more likely to start at the province of Asia, Peter may start in his mind with the province farthest from him and work his way around.) On encyclical or circular letters, see the discussion of *genre in the introduction.

1:2. In the *Old Testament and Judaism, God's people were corporately "chosen," or "predestined," because God "foreknew" them; Peter applies the same language to believers in Jesus. Obedience and the sprinkling of blood also established the first covenant (Ex 24:7-8).

1:3. Peter adopts the form of a *berakhah,* the Jewish form of blessing that regularly began "Blessed be God who . . ." The rebirth may allude to language Jewish people normally used for the conversion of *Gentiles to Judaism (see comment on Jn 3:3, 5), with the meaning: you received a new nature and identity when you converted. Earlier Jewish sources speak of receiving a new heart (Ezek 36:26; **Jubilees* 1:20-21; 4Q393 in the *Dead Sea Scrolls) or becoming like a new person (1 Sam 10:6; *Pseudo-Philo, *Biblical Antiquities* 20:2; 27:10; **Joseph and Asenath* 8:9-11). Believers were reborn to a living hope by Jesus' *resurrection, an inheritance (v. 4) and future salvation (v. 5), three ideas connected in Jewish views of the end of the age.

1:4. *New Testament writers followed Jewish teachers in speaking of "inheriting" the future world; the original source of the idiom is probably Israel's "inheritance" of the Promised Land subsequent to their redemption from Egypt. Some Jewish texts (such as **4 Ezra* 7:77, probably late first century) also spoke of a treasure stored up in heaven for the righteous, but whereas the emphasis for receiving that treasure is normally on one's obedience, the emphasis here is on God's work.

1:5. The Dead Sea Scrolls (e.g., 4QpNah 3.3) and other Jewish texts speak of everything being "revealed" in the "last time"; the deeds of the wicked would be made known, but the righteous would be "saved," delivered, from all that opposed them.

1:6-7. God was sovereign over testings, but his purpose both in the Old Testament and in Judaism was to strengthen the commitment of those who were tested (it was only *Satan whose object in the testing was to bring apostasy—5:8). See comment on James 1:12-16. (The Old Testament and Judaism also taught that sufferings could be discipline to bring persons to *repentance or punishments to fulfill justice and invite repentance; contemporary Judaism developed this concept into the idea of *atonement by sufferings. Although this view does not reflect Peter's emphasis, he does allow that the persecution believers face may function also as God's discipline to wake his people up—4:17.)

Many Jewish traditions also presented the end as preceded by times of great testing. The image of the righteous being tested like precious metals purified in the furnace comes from the Old Testament (Job 23:10; Ps 12:6; Prov 17:3; cf. Is 43:2; Jer 11:4) and continued in subsequent Jewish literature (e.g., Sirach 2:5). Ores of precious metals (the most precious of which was gold) would be melted in a furnace to separate out the impurities and produce purer metal.

1:8-9. Testing could be joyous rather than grievous because these readers knew in advance the goal of the testing: when they had persevered to the end, the final deliverance would come, as in traditional Jewish teaching.

Unlike the testing in James, a primary test in 1 Peter is persecution (see introduction).

1:10-12. Many Jewish interpreters (especially attested in the Dead Sea Scrolls) believed that the Old Testament prophets had told especially about the interpreters' own time, and that their meaning for this time had thus remained cryptic until sages of their own generation were given special insight by the *Spirit. Peter here seems to assert that the prophets recognized that their prophecies applied to the *Messiah who would suffer and be exalted, and that they knew that many details would make sense to the readers only once they had happened. It sounds as if Peter would, however, have agreed with the interpreters in the Dead Sea Scrolls that the Old Testament prophets did not know the "time or kind of time."

That Old Testament servants of God could have the Spirit of God in them is clear (Gen 41:38; Num 27:18), although the Old Testament usually preferred the Hebrew idiom for the Spirit resting "upon" God's servants, empowering them (as in 1 Pet 4:14). According to some Jewish traditions, some secrets were so important that God kept them even from angels until the end time; in other traditions, angels respected *rabbis' esoteric teachings and came to their lectures to listen; in still other traditions, angels envied Israel, who received God's *law.

1:13–2:3
Live the New Life

1:13. Men wore long robes and would tuck them into their belt, and thus "gird up their loins," so they could move more freely and quickly. Although the image also occurs elsewhere in the *Old Testament, here Peter may specifically allude to the Passover (Ex 12:11): once God's people had been redeemed by the blood of the lamb (1 Pet 1:19), they were to be ready to follow God forth until he had brought them safely into their inheritance (cf. 1:4), the Promised Land. Thus they were to be dressed and ready to flee. "Sobriety" in ancient usage meant not only literal abstinence from drink but also behaving as a nonintoxicated person should, hence with dignified self-control.

1:14. "Obedient children" picks up the image of 1:3: born anew, they were no longer what they had been before, and they should obey God (cf. 1:2, 22) as children obeyed their fathers. The obedience of minors to their parents was highly valued, and Roman and Jewish law expected it.

1:15-16. Israel was called to be holy as God was holy and thus to live in a manner distinct from the ways of the nations (Lev 11:44; 19:2; 20:7, 26). The daily *synagogue prayers also stressed holiness to God, hence the idea would have been one of the most familiar to Jewish readers and to Gentiles who had learned Scripture from them. If Peter continues the image of father and children between 1:14 and 1:17, he may allude here to another feature of a child's relationship with a father that was stressed in antiquity: imitation.

1:17. The image of God as an impartial judge was standard in Judaism, which also addressed him as "heavenly Father" in most of its prayers. "Resident aliens" ("foreigners"—NIV; "the time of your stay"—NASB) were distinguished from local citizens, but as legal residents of an area they were viewed more highly than newcomers. Jewish communities throughout the empire generally enjoyed a resident alien status, and although some Jews could achieve citizen status, in other places like Alexandria the Greeks met their attempts to do so with hostility.

1:18. Jewish people often spoke of idolatry as "futile" or "empty." To them idolatry was the most basic characteristic of Gentiles' lifestyle, thus the former way of life of Peter's hearers ("passing down" of the ancestors' way of life by itself could refer either to paganism or to Judaism). Jewish sages contrasted the perishable wealth with the eternal, true wealth, (cf. 1:4, 7, 23) of righteousness or wisdom; here it refers to the price of the hearers' redemption, for which money was insufficient (1:19). (That gold was devalued in this period due to inflation under Nero may have occurred to some of Peter's original hearers but is probably not relevant to Peter's point about perishable gold; cf. 1:7.)

1:19-21. Redemption by the blood of a lamb recalls the annual Passover celebration, by which Jewish people commemorated their redemption (freedom from slavery) in Egypt, through the blood of the Passover lamb (cf. 1:13).

1:22. In Old Testament purity laws, people purified themselves from defilement by cere-

monial bathing; although Judaism continued to practice literal ceremonial washings, it often used the image of washing figuratively for spiritual or moral purification (as occasionally in Old Testament prophets, e.g., Is 1:16; Jer 2:22; 4:14).

1:23. The new life of obedient love (1:22) is natural for the person with a new nature; it was axiomatic in antiquity that children inherited the nature of their parents. (Many writers even remarked that adulterers gave themselves away because children bore their image.) The father's seed was especially important; followers of Jesus had been reborn through the living word, the *gospel (1:3; 2:2), and it was imperishable (1:24-25). (A variety of parallels could be adduced, including Philo's perspective on the divine word as not only imperishable but as "seminal," or a seed; but most of these examples are individual and distinct cases rather than based on general tradition. The parallels may thus all draw from the same sort of natural imagery as Peter's [except that Philo, unlike Peter, might draw on *Stoicism's seminal Logos]. That the Word of God was imperishable, however, was agreed throughout all of Judaism; cf. Is 40:6-8. The present image was more widespread in early Christianity; see 1 John 3:9 and cf. Luke 8:11.) God's word could be depicted as seed elsewhere (e.g., *4 *Ezra* 9:31, 33).

1:24-25. Here Peter quotes Isaiah 40:6-8 (following the *LXX, which is more concise than the Hebrew text here), where the word is the future message of salvation in the time when God would redeem his people (e.g., 52:7-8).

2:1. Ancient writers sometimes employed "vice lists," indicating what people should avoid; Peter employs a miniature vice list. "Putting aside" (NASB) the old ways also follows rebirth in James, Ephesians and Colossians; together with other parallels to those letters, this similarity has suggested to some scholars a common baptismal tradition in the early *church. It might also follow some teaching by Jesus no longer available to us; on possible background to "putting aside," see comment on Romans 13:12 and Ephesians 4:20-24.

2:2. This verse continues the image of rebirth (1:23). Babies were dependent on their mothers or nurses for nourishment by their milk; use of cows' milk was rare. It was believed that children were very impressionable at this nursing stage, and those who allowed them to be tended by nursemaids were advised to select the nurses with care. "Pure" milk meant that it had not been mixed with anything else; the term is used in business documents for sales of unadulterated foods. Pure "spiritual" (NIV, NRSV, GNT) milk is a possible translation (especially if we think in the sense of "nonliteral"), but the adjective here more often means "rational" and could well be rendered "milk of the word" (*logikon;* cf. NASB, KJV), i.e., the "word" of 1:25.

2:3. Here Peter alludes to Psalm 34:8. The term translated "kindness" (NASB) or "good" (NIV, NRSV) was sometimes used to mean "delicious" when applied to foods (as here, milk—v. 2).

2:4-12
Being Built Up as God's People

The *Qumran community (the Jewish monastic sect who wrote the *Dead Sea Scrolls) also portrayed themselves as a new temple. Whereas many of Peter's exhortations to this point are the sort of moral instructions philosophers could give for individual behavior, this section concerns the church's corporate identity and hence corporate witness.

2:4. Peter derives this image from Isaiah 28:16 ("choice," "precious"), which he cites in 2:6.

2:5. The Dead Sea Scrolls portray the Qumran community as a living temple, and one text speaks of the temple's components (pillar, foundations, etc.) as animate beings. "House" could refer to a building, like the temple, or to a household (4:17), even to a large family like the "house of Israel"; both senses may be played on here, as sometimes in the *Old Testament (2 Sam 7:5-7, 12-16). The image of God's people as a "holy priesthood" is from Exodus 19:5-6 (cf. Is 61:6) and appears more explicitly in 1 Peter 2:9 (Israel as a priesthood also appears in some contemporary Jewish texts based on Ex 19:6, including an insertion into the LXX of Ex 23:22). As priests (as well as stones) in this new temple, they would offer sacrifices; others in Judaism also used the image of a spiritual sacrifice (see comment on Rom 12:1; Heb 13:15).

2:6. The Qumran community applied Isaiah 28:16 to their own leadership; early Christians applied it to Jesus (Rom 9:33).

2:7-8. The Jewish interpretive principle *gezerah shavah,* which linked texts that had a common key word, makes it natural for Peter to cite Psalm 118:22 and Isaiah 8:14. Although this interpretive technique suggests that he need not be dependent on Paul, both Peter and Paul may have depended on Jesus for the cornerstone image (Mk 12:10-11). Psalm 118 was sung during the Passover season (cf. 1 Pet 1:19), normally, at least among some Jews in this period, after thanking God for delivering Israel from slavery in Egypt into freedom, "from darkness to great light" (cf. 2:9).

2:9. Roughly half this verse is a direct quotation of Exodus 19:6, implying that all Christians, including *Gentile Christians, share in God's covenant with Israel. Jewish people on the Passover described their deliverance from Egypt as a call "from darkness into great light" (Mishnah *Pesahim* 10:5). Old Testament prophets taught that God had redeemed his people for his praise (e.g., Is 60:21; 61:3; Jer 13:11).

2:10. Peter cites Hosea 1:10 and 2:23, which reverse God's earlier verdict against Israel (Hos 1:6, 8-9), promising the restoration of God's people in the end time. Like Paul, Peter believes that Gentiles converted to Israel's true faith, the message of Jesus, are part of this end-time people of God (Rom 9:24-26). Had he wished, he could have cited more direct Old Testament passages to support his conclusion (e.g., Is 19:24-25; 56:3-8).

2:11. On "resident aliens" (the normal sense of the terms usually translated "aliens and strangers"), see comment on 1:17. *Philo spoke of souls as being "strangers" (using a term technically more foreign than "resident aliens"; *Confusion of Tongues* 81; *Who Is the Heir?* 267) in their bodies, belonging instead to heaven. The image here is of God's people (2:4-10) dispersed among the nations; God's people in the Old Testament were sometimes portrayed in such terms (Lev 25:23), because of their mortality (1 Chron 29:15; Ps 39:12), because of zeal for God (Ps 69:8; cf. 119:19) or because of their wanderings (Gen 23:4; 47:9). Greek philosophers often viewed fleshly passions as "waging war" against the soul and emphasized the need to war against them (cf. also Philo, *Creation* 81). Peter uses the same image, although not for the same reason that philosophers often did (freeing the soul from earthly distractions); he demands proper living (2:12).

2:12. Jewish people living in the *Diaspora (1:1) always had to be concerned about Gentiles' anti-Jewish slanders, for their safety and for their witness to the one true God. Just as Gentiles were more than happy to slander Jews living among them, they were happy to slander Gentile converts to what they viewed as a Jewish sect, Christianity (2:4-10). The behavior advocated in the following household codes (2:13–3:12) would undermine some of the most traditional slanders against such faiths, slanders that they subverted the public order and traditional family values. "Day of visitation" (KJV, NASB) was good Old Testament language for God's coming day of judgment (e.g., Is 10:3); many texts reported that the Gentiles would recognize God's glory in the end time (e.g., Is 60:3).

2:13-17
Responsibilities Toward the State

Many ancient household codes were set in the context of discussions of city management and included instructions on how to behave toward the state (as well as toward parents, elders, friends, members of one's household, etc.). According to contemporary aristocratic ideals, the household mirrored the government of a city-state, so public obligations and obligations within the household (2:18–3:7) were commonly treated together.

*Stoic and other philosophers commonly used these ethical codes to delineate proper relationships with others. Jewish people and members of other slandered religious groups sometimes adopted these codes to demonstrate that their groups actually supported the values of Roman society; this demonstration was important in combating persecution. See comment on Romans 13:1-7.

2:13. Vassal kings in the East ruled their people with Rome's permission but were required to act in Rome's interests. Because most of Peter's hearers (1:1) would instead be directly under governors (2:14), by "king" Peter may refer especially to the Roman emperor. Although the emperor's title was technically *princeps,* i.e., "the leading citizen" or the first among equals (to preserve the myth of the re-

public in the early years of the empire), everyone knew that he was the supreme earthly king in the Mediterranean world.

2:14. The term translated "governors" covers both legates (who governed imperial provinces as representatives of the emperor—2:13) and proconsuls (who governed senatorial provinces). Such representatives of Rome ruled most of the empire. Governors of imperial provinces were "sent by" the emperor and were expected to administer justice. "Praise" would include the many inscriptions of praise dedicated to benefactors who provided wealth or services for municipalities.

2:15. "Ignorance" includes the false understanding of Christianity spread among outsiders (more than in 1:14); Roman aristocrats were much quicker to malign minority religions, whose worship did not assimilate to Roman values, than to seek to understand them. The *Old Testament taught God's sovereignty over rulers (Prov 16:10; 21:1).

2:16. Here Peter modifies a common exhortation of ancient philosophers: for them, freedom from the world's values meant not only authority to do as one pleased but also freedom to pursue virtue, freedom from desire and freedom to do without. Most philosophers (such as contemporary *Stoics) regarded the wise man as the ideal ruler but still advocated obedience to the state. For Christians, freedom meant freedom to be God's slaves rather than slaves of sin; it meant freedom from the tyranny of the state but also freedom to uphold the laws of the state as God's servants (v. 15).

2:17. Such brief lists of these kinds of duties appear in other ancient moralists (e.g., Isocrates, Marcus Aurelius, Syriac Menander). The Old Testament also associated honoring God with honoring those in authority (Ex 22:28; 1 Kings 21:10; Prov 24:21).

2:18-25
Duties of Servants

This passage addresses household slaves, who often had more economic and social mobility than free peasants did, although most of them still did not have much. Field slaves on massive estates were more oppressed; given the regions addressed (1:1) and the nature of household codes (see comment on 2:13-17), they are probably not addressed here and at *most* are peripherally envisioned. The most oppressed slaves, who worked in the mines, were segregated from the rest of society and would not have access to Peter's letter; they are not addressed here at all.

It should also be kept in mind that Peter does not address the institution of slavery per se, although his sympathy is clearly with the slave (2:21). No ancient slave war was successful, and abolition was virtually impossible in his day except through a probably doomed bloody revolution. In this situation, it was far more practical for a pastor to encourage those in the situation to deal with it constructively until they could gain freedom. On slaves and household codes, questions of subsequent application and so forth, see comment on Ephesians 6:4-9 and the introduction to Philemon.

2:18-20. Except those slaves who were able to save enough money on the side to buy their freedom (which many household slaves could do), slaves were not in a position to achieve freedom. (Often the holders freed their slaves as a reward or to keep from having to feed them in old age, but slaves could not refuse that arrangement.) Although slaves and masters cooperated in many households as members of a common family, laws viewed slaves as property as well as people, and some slaveholders abused them as property; nearly all slaveholders treated them as socially inferior. (An aristocrat eating together even with his freedmen was considered unusual.) Philosophers (especially the popular Stoics) generally counseled that slaves do their best in the situation in which they found themselves; this was also the view of *Epictetus, a Stoic philosopher who had been a slave earlier in life.

2:21. Moralists commonly cited models for imitation. Philosophers also often prided themselves in their ability not to be bothered by insults or deprivation (e.g., one said that Socrates, when advised that he suffered unjustly, protested, "What—would you rather I suffer justly?" Diogenes Laertius 2.35). Although ancient society was very status-conscious and associated power with greatness, Peter identifies *Christ with unjustly treated slaves.

2:22. Here Peter quotes Isaiah 53:9, the first of several allusions to Isaiah 53 in this passage.

The passage describes "the suffering servant," a role fulfilled by Jesus (cf. comment on Mt 12:17-18).

2:23. This verse may reflect the idea of Isaiah 53:7: though oppressed, he did not open his mouth. In a society based on respect and honor, refusing to reply in kind was a painful experience; subordinates like slaves were accustomed to it, but it could not have failed to hurt many of them. Many philosophers also advocated enduring reviling without responding in kind.

2:24. Here Peter reflects the language of Isaiah 53:4-5. In this context (1 Pet 2:24, 25), Peter takes the "healing" as healing from sin, as it often was intended in the prophets (e.g., Is 6:10; Jer 6:14; 8:11) and sometimes in later Jewish literature (as probably in the eighth benediction of the Amidah, a regularly recited Jewish prayer).

2:25. This verse echoes Isaiah 53:6. The image of Israel as sheep was common in the *Old Testament (e.g., Is 40:11), and the image of Israel as scattered sheep wandering from the shepherd also appears elsewhere (Jer 50:6; Ezek 34:6; cf. Ps 119:176). An "overseer" (NIV; "guardian"—NASB, NRSV) was one who watched over, protected and had authority; Diaspora Judaism sometimes applied the term to God. In the Old Testament, God is the chief shepherd of his people (see comment on Jn 10:1-18).

3:1-7
Wives and Husbands

Although Peter upholds societal norms for the purpose of the *church's witness in society (see the introduction to the household codes in 2:13-17), his sympathy here is clearly with the woman, as it was with the slaves in 2:18-25. He continues to advocate submission to authority for the sake of witness (3:1) and silencing charges that Christianity is subversive; husbands were always in the position of authority in that culture. Peter addresses wives at much greater length than husbands; if proportions of converts were comparable to Judaism, women may have largely outnumbered men in the churches. (The proportion may have been greater for Jewish converts, however, since *Diaspora churches did not require circumcision, one factor that discouraged male conversion.)

3:1. "In the same way" refers back to the passage on slaves (2:18-25). Like Judaism and other non-Roman religions, Christianity spread faster among wives than husbands; husbands had more to lose socially from conversion to an unpopular minority religion. But wives were expected to obey their husbands in Greco-Roman antiquity, and this obedience included allegiance to their husbands' religions. Cults that forbade their participation in Roman or other local religious rites, including prohibiting worship of a family's household gods, were viewed with disdain, and Jewish or Christian women who refused to worship these gods could be charged with atheism. Thus by his advice Peter seeks to reduce marital tensions and causes of hostility toward Christianity and Christians. Silence was considered a great virtue for women in antiquity.

3:2. "Chaste and respectful" (NASB) is the behavior that was most approved for women throughout antiquity.

3:3. Hair was braided in elaborate manners, and well-to-do women strove to keep up with the latest expensive fashions. The gaudy adornments of women of wealth, meant to draw attention to themselves, were repeatedly condemned in ancient literature and speeches, and Peter's hearers would assume that his point was meant in the same way (challenging excess, not clothing per se). See comment on 1 Timothy 2:9-10.

3:4. Ancients considered a meek and quiet spirit a prime virtue for women, and many moralists advised this attitude instead of dressing in the latest fashions to attract men's attention, a vice commonly attributed to aristocratic women but imitated by others who could afford to do so.

3:5. Moralists often added examples of such quietness to their exhortations; they especially liked to appeal to matrons of the distant past, who were universally respected for their chaste behavior in contrast to many of the current models in Roman high society. Jewish readers would think especially of the great matriarchs, extolled for their piety in Jewish tradition: Sarah, Rebekah, Rachel and Leah, Sarah being most prominent. The readers might think of head coverings that were prominent in much of the East, meant to render the married woman inconspicuous

(see comment on 1 Cor 11:2-16), but inner adornment is Peter's emphasis here.

3:6. Although Peter explicitly advocates only "submission" (v. 1), he cites Sarah as an example even of "obedience," which was what Greek and Roman male society ideally demanded of their wives. That Abraham also "obeyed" Sarah is clear in Genesis (the term usually translated "listen to" in 16:2 and 21:12 also means "obey," and in both passages Abraham submits to Sarah), but this point is not relevant to Peter's example for wives with husbands disobedient to the word (3:1; see the introduction to this section). (One should not read too much into Sarah's calling her husband "lord" here. The direct address "lord" may have been used in Hebrew to address husbands respectfully as "sir," e.g., Hos 2:16, but apart from Gen 18:12 it is primarily in later Jewish traditions such as the *Testament of Abraham* that Sarah addresses Abraham in this manner. Even in the *Testament of Abraham*, Isaac also addresses his mother with a similarly respectful title, and Abraham so addresses a visitor, unaware that he is an angel [cf. also Gen 18:3]. In another Jewish tale, Asenath calls her father "lord" yet answers him boastfully and angrily, although Peter certainly does not suggest such behavior here. In the patriarchal period, it was a polite way to address someone of higher authority or one to whose status one wished to defer, e.g., Jacob to Esau in Gen 33:13-14.) Jewish people were considered "children" of Abraham and Sarah; on Christians' fulfilling such a role, cf. 2:9-10.

Peter's advice is practical, not harsh as it might sound in many of our cultures today. Although philosophers' household codes often stressed that the wife should "fear" her husband as well as submit to him, Peter disagrees (v. 6; cf. 3:13-14). Husbands could legally "throw out" babies, resort to prostitutes and make life miserable for their wives, although sleeping with other women of the aristocratic class was prohibited, and reported examples of physical domestic abuse are rare in this region (when compared to the beatings of children and slaves) (known exceptions included the North African region in which Augustine grew up and an earlier abuser named Egnatius). (In a mid-second-century account, a Christian divorced her husband for his repeated infidelity, so he betrayed her to the authorities as a Christian.) Christian wives were limited in their options, but Peter wants them to pursue peace without being intimidated.

3:7. Although his point is to address the many converted wives with unconverted husbands (3:1-6), he includes a brief word for converted husbands as well. Many philosophers, moralists and Jewish teachers complained about the moral and intellectual weakness of women; some referred to the weakness of their bodies. Women's delicacy was considered an object of desire, but also of distrust; even the traditional Roman legal system simply assumed their weakness and inability to make sound decisions on their own. This approach fit the earlier conceptions of *Aristotle, who argued that women were by nature inferior to men in every way except sexually.

Yet this weakness (Peter may apply it only to social position) was often cited as a reason to show them more consideration, and Peter attaches no explicit significance to this common term *except* that requirement; the rest of the verse declares women to be equal before God, which ruined any arguments of their inferiority "by nature." A husband who failed to honor his wife as spiritual peer jeopardized his own prayers, for the reason Peter gives in 3:12.

3:8-12
Be Kind to One Another

Peter concludes his argument of 2:13–3:7 in the verses following 3:8, although this conclusion flows directly into his next argument. It reinforces the sense of mutual consideration Peter wishes to engender in household relationships, within limitations imposed by the culture he addresses.

3:8. Moralists often listed virtues. They also often lectured on the topic of "harmony" between husband and wife. Advocating peace in all relationships in the home would not have offended any Roman moralists (3:13). "Sympathy" recalls the exhortation to husbands in 3:7, which probably means to "understand" their wives.

3:9. Parallels with Jesus indicate that his teaching may be the source of part of this verse; see comment on Romans 12:17.

3:10-12. Having cited Psalm 34:8 in 2:3, Peter now cites Psalm 34:12-16, which instructs

the righteous to pursue peace with others and to speak no evil, thus supporting what he has argued in 2:13–3:7. (Jewish teachers also emphasized that one should pursue peace actively, not just passively.) The citation also indicates that although God hears the righteous, he opposes the wicked and hence does not hear the prayers of those who mistreat others (3:7).

3:13-22
Be Prepared to Suffer for Doing Good

This section flows naturally from 3:8-12.

3:13-14. Peter alludes to the language of Isaiah 8:12, where God assures the prophet that he need not fear what the rest of his people feared, but should trust in God alone (8:13).

3:15. The *Septuagint (standard Greek version) of Isaiah 8:13 begins "Sanctify the Lord [i.e., God] himself"; here *Christ is the Lord. The "defense" (NASB, NRSV; the common translation "answer" is too weak) implies especially (though probably not only) the image of a legal defense before a court, given "judgment" and execution in the context (4:5-6).

3:16. Judaism also tried this tactic to undermine false accusations.

3:17. Ancient writers sometimes communicated points through special literary forms; one of these is called *chiasmus, an inverted parallel structure, which seems to occur here:

A Your slanderers will be ashamed (3:16)
B Suffer though innocent, in God's will (3:17)
C For Christ suffered for the unjust (3:18)
D He triumphed over hostile spirits (3:19)
E Noah was saved through water (3:20)
E' You are saved through water (3:21)
D' Christ triumphed over hostile spirits (3:22)
C' For Christ suffered (4:1a)
B' Suffer in God's will (4:1b-2)
A' Your slanderers will be ashamed (4:3-5)

3:18-19. On "flesh" and "Spirit," see comment on Romans 8:1-11; the idea here is probably that Jesus was resurrected by the *Spirit of God, by whom also he went (presumably after the *resurrection) to proclaim triumph over the fallen spirits. Of the many views on this text, the three main ones are (1) that between his death and resurrection, Jesus preached to the dead in Hades, the realm of the dead (the view of many church fathers); (2) that Christ preached through Noah to people in Noah's day (the view of many Reformers); (3) that before or (more likely) after his resurrection, Jesus proclaimed triumph over the fallen angels (the view of most scholars today). In early Christian literature, "spirits" nearly always refers to angelic spirits rather than human spirits, except when explicit statements are made to the contrary. The grammar here most naturally reads as if, in the Spirit who raised him, he preached to them after his resurrection; further, v. 22 mentions these fallen angels explicitly. The view that these were instead spirits of the dead often rests on 4:6, but the point of 4:6, which caps the section, is that martyrs put to death in the flesh will be raised by the Spirit as Christ was in 3:18.

Except for most later *rabbis, nearly all ancient Jews read Genesis 6:1-3 as a reference to the fall of angels in Noah's day (1 Pet 3:20); after the flood, they were said to be imprisoned (so also 2 Pet 2:4; Jude 6), either below the earth or in the atmosphere (cf. 1 Pet 3:22). Then, according to a commonly known Jewish tradition, Enoch was sent to proclaim God's judgment to them; here Christ is the proclaimer of triumph over them.

3:20. Ancient Judaism sometimes used the flood as a prototype of future judgment, as in 2 Peter 3:6-7. The emphasis on the salvation of "few" would encourage Christian readers, who were a persecuted minority. God's "patience" reflects Genesis 6:3 and is mentioned in connection with the final judgment in 2 Peter 3:9.

3:21. The act of faith indicated in *baptism, rather than the physical cleansing, was what was significant; baptism was an act of conversion in ancient Judaism, but Judaism insisted on the sincerity of *repentance for it to be efficacious.

3:22. "Authorities and powers" were angelic rulers over the nations, of which Jewish texts often speak (see comment on Eph 1:21-23). Thus even the evil powers behind the rulers who persecuted Christians had been subdued, and the final outcome was not in question.

4:1-11
Persevere in the New Life

4:1-2. Although the expression was often used figuratively, "arm yourselves" may evoke

the military imagery of soldiers arming, training or otherwise preparing themselves for battle and possible death. The sense might be that those who died with *Christ through faith (cf. 2:24; or, those who have shared in some of his sufferings) are genuinely prepared to suffer with him in any other way, including martyrdom.

4:3. Unlike certain maligned religions, social clubs demanded orderly behavior at parties. Nevertheless, dinners at the homes of *patrons and probably those of social clubs lasted far into the night, with heavy drinking and men often pursuing slave women or boys; religious festivals were similar occasions for immorality. Social clubs, household cults and virtually all aspects of Greco-Roman life were permeated with the veneration of false gods and spirits; hosts poured libations to gods at the beginning of banquets. Although this behavior was not immoral from the general Greco-Roman perspective, Jews and Christians condemned it as immoral. Jewish people rightly regarded this behavior as typical of *Gentile men in their day—most commonly, though by no means exclusively, on pagan festivals.

4:4. Although Jewish people did not participate in the lifestyle characterized in 4:3, their pagan neighbors often portrayed them as lawless and subversive because of their alleged antisocial behavior. The earliest pagan reports of Christians testify that the same prejudices were applied to them, although the authorities never found evidence substantiating these rumors from those they interrogated under torture. Nero's accusation against the Christians he butchered was that they were "haters of humanity," i.e., antisocial. But rumors of Nero's own base immorality offended even the Roman aristocracy.

4:5. These pagans, not the Christians (3:15), would have to give "account" at the final trial, before God. Since the *Old Testament period, the final day of judgment had often been portrayed in courtroom terms.

4:6. Although some commentators regard "those who are dead" as souls of the dead, they seem to be Christians "judged" by earthly courts and executed, who would nevertheless be raised by the *Spirit, as in 3:18. Compare Wisdom of Solomon 3:1-6.

4:7. In many Jewish traditions (including Dan 12:1-2), the end of the age would be preceded by a period of great suffering; the impending end, therefore, calls for exhortations to perseverance in seriousness and prayer.

4:8. Proverbs 10:12 seems to prohibit gossiping about one another's sins or slandering one another (cf. Jas 5:20). The implication here may be that love overlooks one another's faults, although some scholars have suggested that it means that those who love will themselves find *grace in the day of judgment (1 Pet 4:5-6).

4:9. Hospitality was receiving others, especially taking in travelers of the same faith who needed a place to stay. As generally in the ethical ideals of antiquity, lodging and provisions were to be provided generously, not grudgingly.

4:10-11. Like Paul (Rom 12:4-8), Peter emphasized the diversity of gifts in the *church and the need for all of them until the end; this argument was highly unusual in ancient Judaism. Speaking as if one uttered divine "oracles" would no doubt refer to the gift of *prophecy, or at least prophetic inspiration in some form of speaking for God. On prophecy and serving, see comment on Romans 12:6-8 and 16:1.

4:12-19
Christians Judged First

In the Old Testament (Dan 12:1-2) and much Jewish tradition, God's people would suffer greatly just before the time of the end; then the wicked would be judged. Jewish tradition often emphasized that the righteous experienced their sufferings in this age but that the wicked would experience theirs throughout the *age to come. Such persecutions as are mentioned here continued for two more centuries in the Roman Empire and have continued periodically in various times and places throughout history; perhaps for such reasons, believers in each generation have had the occasion to feel close to the end of the age.

4:12. It is possible that Peter alludes to the fate that would befall many Christians captured in Rome in A.D. 64: they were burned alive as torches to light Nero's gardens at night. But he may simply allude again to the image of gold being tried by fire (1:7), and perhaps to the fire of judgment day being experienced in advance; the language of fiery trials was often used figuratively.

4:13. Some Jewish people described the time of tribulation before the end as the "Messiah's travail"; Peter might therefore be saying that those who share the *Messiah's sufferings also hasten the coming of the end. Nevertheless, the regular *New Testament idea of sharing Christ's sufferings is probably adequate to explain the passage.

4:14. The *Old Testament and Jewish tradition often speak of the Spirit resting "on" God's servants, empowering them for their task. In the light of "glory" in verse 13, Peter presumably means, "the Spirit who will raise you [4:6] is already on you."

4:15. Second-century apologists, or defenders of Christianity, argued that the only charge on which true Christians were ever convicted was the charge of being a Christian. The Greek term for "meddler" (NIV, NASB) could refer to sorcerers but some think that it refers to "busybodies" (KJV), those giving unwanted and ill-timed advice. Meddling tactlessly in others' affairs was a vice often attributed to unpopular *Cynic philosophers (to whom some Christian preachers had already been compared). The meaning of term used here, though, remains debated.

4:16. The nickname "Christian" was originally used only by those hostile to Christianity; see comment on Acts 11:26. Here it is parallel to legal charges like "murderer" and "thief." Early Roman descriptions of Nero's persecution use this title for Jesus' followers. Many wise men in Greek tradition pointed out that it was truly noble to suffer scorn for doing good; in Greco-Roman society, obsessed as it was with shame and honor, this was a countercultural insight.

4:17. The image of judgment beginning at God's household is an Old Testament one (Ezek 9:6; cf. Jer 25:18-29; Amos 3:2), as is the ominous expression, "the time has come" (Ezek 7:7, 12). Believers experience the judgment of earthly courts (1 Pet 4:6), but Peter probably sees that suffering also as God's discipline, as Jewish teachers often did. Throughout history, persecution has often refined and thus strengthened the church.

4:18. Peter proves his case in 4:17 by citing the *Septuagint of Proverbs 11:31, which may reflect what had become a prevailing Jewish conception by Peter's day, that the righteous suffered in this life, but the wicked suffered in the world to come.

4:19. Peter again echoes the familiar language of Jewish prayer: the final benediction of one regularly uttered Jewish prayer (the Eighteen Benedictions) included the lines "Our lives are committed to your hand, and our souls are in your care," and some others also uttered similar prayers in the face of possible death (cf. 2 Maccabees 13:14); the prototype for all of them was probably Psalm 31:5 (cited in Lk 23:46).

5:1-5
Faithful Caretakers of the Flock

The behavior of *church leaders in the time of crisis could encourage or discourage the flock. The leaders, once known, would be the first targets of search, capture, torture and execution.

5:1. Elders, older and wiser men skilled in judging cases, ruled in most Israelite towns in the *Old Testament. In the *New Testament period, "elders" held a respected place in the *synagogues, from which the churches took over this form of leadership. Peter ranks himself among them as a fellow elder.

5:2. The image of a "shepherd" most readily connotes a concerned guide rather than a severe ruler (although the image of shepherds had often been applied to rulers in parts of the ancient Near East, to Greek kings and so forth). Charges of illegitimate gain were often made against moral teachers in the ancient world, and it was necessary for Christians to avoid even the appearance of impropriety. (Like certain officials in the Jewish community, these Christian leaders distributed the funds for the poor.)

5:3. Heads of Greek philosophical schools and Jewish schools of law presented their lives as models to their students, but some also exercised strict control. A closer parallel to this text would be elders in *Diaspora synagogues, who were responsible for the services and led the Jewish community but normally had no official power outside settling internal legal disputes.

5:4. In some ancient texts a "chief shepherd" appears to have been an overseer of a group of other shepherds, although they were usually not well-to-do themselves. "Crowns" were garlands given to victors of athletic contests,

benefactors or other heroes, and they were perishable; those faithful to *Christ would receive an imperishable crown. The image was also used in Judaism.

5:5. Respect for parents, elders and, in Judaism, those more knowledgeable in the *law was socially obligatory in antiquity; some Jewish traditions regarded it as an expression of one's respect for God. Such respect included deferring to the wisdom of older men and allowing them to speak first. Peter advocates submission to the ruling elders (5:1), but he also urges—against Greco-Roman society's ideals—mutual humility, based on the teaching of the Old Testament (Prov 3:34).

5:6-11
Persevere by Grace

Although 1 Peter 5:5-9 has sufficient similarities with James 4:6-10 to suggest a common source for the imagery, the application is different. In James, the test is poverty and oppression tempting people to retaliate. In 1 Peter, it is persecution tempting believers to fall away.

5:6. Following on Proverbs 3:34, cited in 1 Peter 5:5, Peter urges believers to "humble" themselves before God. In the *Old Testament, this idea often meant repenting, sometimes when facing impending judgment (4:17), or learning one's complete dependence on God. Here the sense includes embracing and accepting the suffering until God provides the way out (cf. Jer 27:11). On present humbling and future exalting, see comment on Luke 1:52-53 and 14:11; the cries of God's people during unjust sufferings had always moved him to act on their behalf (Ex 2:23-25; 3:7-9; Judg 2:18; 10:16).

5:7. Although the promise of complete relief from persecution is future (5:6), Peter encourages believers to pray and trust God's love for them in the present. Judaism learned to see God's love in Israel's sufferings (as disciplines of love), but most *Gentiles, who bartered sacrifices and vows to get benefactions from the gods, had difficulty with this concept.

5:8-11. In the Old Testament, "*Satan" (in the Hebrew of Job, a title, "the satan") was the accuser, the prosecuting attorney before God—the "adversary," as Peter says. In Jewish tradition, Satan accused God's people before God's throne day and night (except, in later accounts, on the Day of Atonement). The "devil" is literally the "slanderer," carrying the same connotation as the adversarial accuser. Jewish teachers recognized that, as in the book of Job (where he "went about" over the face of the earth—1:7), Satan sought in this present age to turn people to apostasy from the truth, although his power was limited because he ultimately had to answer to God. The *Dead Sea Scrolls called the present evil age the "dominion of Satan" (1QM 14.9).

Lions were viewed as the most ferocious and mighty beasts, and from Psalm 22:13 (probably the background here) they came to be used as figures for enemies of God's people. In the time of Nero, Christians were fed to some literal lions as well. The small, isolated Christian communities could take heart that their other spiritual siblings—starting with the churches Peter knew in Rome—were experiencing the same trials (1 Pet 5:9), until the end (v. 10).

5:12-14
Conclusion

5:12. Silvanus (the full Roman name for which the similar name Silas served as a short equivalent) appears to have been the amanuensis, or *scribe. Most letters were written through the agency of scribes. As a Roman citizen (Acts 16:37), Silas presumably came from a fairly well-to-do Jewish family that provided him a good literary and *rhetorical education; Peter may have given him some degree of freedom in wording the letter. On assertions of brevity, see comment on Hebrews 13:22; it was a polite closing formula in many ancient speeches and letters.

5:13. Jewish people by this period viewed Rome as the fourth of the four kingdoms in Daniel 7 that would oppress Israel, a successor to Babylon. Some elements of contemporary Judaism had readily transferred prophecies of Babylon's demise in the *Old Testament to the new empire of Rome (a transferral readily highlighted after A.D. 70). "Babylon" had thus become a fairly common cryptogram for Rome (although "Edom" was more popular with later *rabbis).

5:14. Kisses were a common affectionate greeting for close friends and relatives.

2 Peter

Introduction

Authorship and Date. Regarding authorship, 2 Peter is one of the most disputed letters in the *New Testament. A number of scholars argue that the style differs so much from 1 Peter that the same person could not have written both unless he were purposely trying to alter his style. But some scholars respond that Peter could have given literary freedoms to his amanuenses, using a different *scribe (1 Pet 5:13) for each, with the second being more accustomed to bombastic Asiatic *rhetorical style. (Although many second-rate rhetoricians preferred flowery Asianism, Atticist style became predominant and ultimately flourished by the early second century. This style might provide a clue to the destination or, more likely, the date [before the second century], although it might reveal only the rhetorical training of the author or scribe. *Quintilian noted that a third style, the Rhodian, less redundant than the Asiatic school but less concise than the Atticist, was sometimes also used.)

The most important argument against Petrine authorship is the letter's clear dependence on Jude, yet defenders of Petrine authorship counter that Peter could have incorporated much of Jude's letter, instructed a scribe to do so or (much less likely) even used Jude as his scribe. (That Jude used 2 Peter is improbable, based on simplifications of imagery, expansions of allusions, etc.) Others argue that a later writer, maybe a close associate of Peter, wove together Petrine material with material from Jude.

The attestation for 2 Peter is weaker than that for most other New Testament books but stronger than that of early Christian books that did not become part of the New Testament, especially those claiming to be Petrine. The early *church did debate its genuineness, although its *existence* is attested early. But *pseudepigraphic documents were generally written in the name of a hero of the distant past; although a second-century date for the letter is possible, no internal evidence necessarily precludes a first-century date. Second-century *Gnosticism is probably not in view, and the end's delay was an issue perhaps as early as the first New Testament document (1 Thessalonians).

Opponents. One suggestion of the heresy combated in this letter is second-

century Gnosticism or a first-century proto-Gnosticism; "knowledge" (a favorite emphasis of the Gnostics, though hardly limited to them) is mentioned seven times in the letter. Gnostics denied the future coming of Christ, and many of them believed that bodily sins did not matter. Gnosticism did not, however, create these ideas from nothing; they developed earlier Greek (plus Jewish and Christian) ideas that were already evident in the first century.

Given the reports of charlatans so prominent in antiquity and parallels to all the ideas in existing Greek and Jewish conceptions in the first century, it is likely that the opponents are simply *Diaspora Jews almost completely overtaken by Greek thought (perhaps even more than *Philo was). Parallels in Diaspora Jewish literature as well as Judean works in the so-called Psuedepigrapha suggest an audience with a strong background in Jewish literature.

Genre. Second Peter is clearly one of those ancient letters intended for a wide circulation (1:1), although the style indicates that it was not directed toward the highest literary circles who normally read such letters. Besides being a "general letter," some scholars have found in it elements of the "testamentary" *genre: testaments were final instructions left by a dying father or leader (cf. 1:14).

Commentaries. Very helpful for background are Richard J. Bauckham, *Jude, 2 Peter,* WBC 50 (Waco, TX: Word, 1983); and Gene L. Green, *Jude & 2 Peter,* BECNT (Grand Rapids: Baker Academic, 2008). On a less technical level, see, e.g., J. N. D. Kelly, *A Commentary on the Epistles of Peter and Jude* (reprint, Grand Rapids: Baker Book House, 1981); Steven J. Kraftchick, *Jude, 2 Peter,* ANTC (Nashville: Abingdon, 2002); and Ruth Anne Reese, *2 Peter & Jude,* Two Horizons (Grand Rapids: Eerdmans, 2007).

1:1-2
Introduction

The Greek text here reads "Simeon" (NRSV) rather than "Simon" Peter; this form of the name is less common but closer to the original Semitic form of the name than "Simon" is (also in Acts 15:14). Although "*Savior" was a divine title in Judaism and antiquity as a whole, it could be applied more generally; but applying the title "God and Savior" (the most natural translation) to Jesus was a clear statement of his divinity and would have offended typical Jewish readers who were not Christians. Writers often established the intimate relationship between themselves and their readers at the beginning of a letter (thus, "faith like ours"). "*Grace and peace" adopts a standard ancient greeting form but with *Christ at the center; see comment on Romans 1:7.

1:3-11
How to Persevere to Salvation

This section is sometimes said to adapt the literary form of a civic decree known from inscriptions honoring benefactors, but the evidence for this thesis is hardly compelling. Although the parallels demonstrate ideas in common between this passage and some decrees, such ideas were relatively widespread and can be identified in other literary forms as well. They do illustrate that Peter praises God and his benefactions lavishly.

1:3-4. "Divine power" and "divine nature" had been important phrases in Greek thought for centuries; they had also become standard in many *Diaspora Jewish writers. Many Greeks in this period wanted to escape the material world of decay around them, believing that their soul was divine and immortal and belonged in the pure and perfect heavens above; some Greek thinkers and cults provided this idea as a hope for the masses.

Many Greek writers, some Jewish writers like *Philo and generally later *Gnostics argued that one could become "divinized," a god, either in life or at death; in some systems this divinization involved absorption into the divine. But most of ancient Judaism rejected the idea of divinization; there was only one God (cf. Gen 3:5; and even Philo meant divinization in a very qualified sense). Many Diaspora Jewish texts used language like Peter's but nearly always only to indicate reception of immortality, not divinization. (Peter applies this language to the Christian view that a believer in Jesus receives a new nature; see comment on 1 Pet 1:23.) In the context of monotheistic early Christianity, embattled by polytheistic culture, Peter's subdued language might help to refute claims of those who expected full divinization.

That Peter's immediate cultural context is Diaspora Judaism rather than Greek paganism may be indicated by how he defines physical "corruption" or "decay": its source is lust (v. 4; cf. 2:14; 3:3). Immortality was available, as the Greeks wished, but it was made available only through purification from sin (1:9); and the Greek concept of immortality is qualified by the biblical hope in the *kingdom and hence future *resurrection (cf. 1:11).

1:5-7. Lists of vices and virtues appear elsewhere in ancient literature. Adding one virtue, vice or some other next step to a former one, as here, was also a standard literary form that appears in Jewish, Greek and Roman texts (such progressions were sometimes called sorites); cf., e.g., Wisdom of Solomon 6:17-20. "Moral excellence" (NASB) or "goodness" (NIV, NRSV, GNT) was the catchall Greek "virtue" (KJV) representing nobility of character.

1:8. Greek philosophers saw philosophical knowledge as the key to changing people's behavior; Peter may, however, intend "knowledge" to include the sense of a personal relationship, as often in the *Old Testament.

1:9. Jewish texts also speak of moral corruption and defilement from which one must be "purified" (cf. 2:20).

1:10-11. Judaism often spoke of Israel's "calling" and "chosenness." Peter applies these terms to all who would persevere to *eternal life. The future transformation of the world and an eternal kingdom established in the future were Jewish and Christian ideas foreign to pagan Greek thought.

1:12-21
Peter's Eyewitness Traditions

1:12. "Reminding" was a common part of ancient moral exhortation, especially when softened by the qualification "though you already know this."

1:13. A number of ancient texts compared the body to a tent, as here; Peter chooses an image that his readers would readily grasp.

1:14. Various Jewish writers believed that the righteous often were warned of their impending death in advance. In ancient Jewish stories, heroes often gave final exhortations to their heirs in "testaments" as their death approached. Some suggest that by announcing his imminent death (undoubtedly his execution in Rome), Peter may inform his readers: These are my final instructions to you, so pay close attention. Cf. John 21:18-19.

1:15. Reminders were common in testaments (1:14), although they were also common in moral exhortations in general (1:12). "Departure" here is literally "exodus," a term occasionally used in ancient texts for death (e.g., Lk 9:31).

1:16. The term translated "myths" (NRSV) was usually used negatively for untrue stories, such as slanderously false accounts about the gods; "myths" were contrasted with reliable accounts. Eyewitness testimony was important in establishing a case historically or legally, although Greek and Roman *rhetoricians did not always give it as much weight as it bears today. (Some scholars have drawn attention to the point that the same term Peter uses for "eyewitnesses" here was used for initiates in the final stage of initiation in some pagan *mystery cults, such as the Eleusinian and Samothracian mysteries; but a related term was also applied to the higher philosophy by *Plato and *Aristotle, and it was a *frequent* term for eyewitnesses, applied even to God himself in *Diaspora Judaism. Because Peter describes not his initiation into the faith but an eyewitness experience distinct from that initiation, the eyewitness element is the central point. Like Peter here, the Gospels are at pains to point out that the glory which Jesus' companions would see before death was the transfiguration, not the Second Coming; but the transfiguration prefigured the Second Coming; cf. 1:19.)

1:17. Some "testaments" (see comment on 1:14) cited special revelations (often heavenly journeys) of the hero; Peter provides a more down-to-earth revelation: what he experienced at the transfiguration (Mk 9:2-13). Early Judaism often referred to God speaking from heaven (see comment on Mk 1:11 for the texts excerpted here). "The Glory" was sometimes a Jewish circumlocution for God; Peter probably intends an allusion to Sinai, where God revealed his glory to Moses.

1:18. Israel also experienced a revelation of God at a "holy" mountain, and Peter probably parallels his own witness of Jesus' glory with Moses' witness of God's glory on Mount Sinai (an allusion also probably present in the Gospel accounts of the transfiguration). (The *Old Testament usually applies the "holy mountain" title to Zion, but Zion was to be the site of the new Sinai, or *law giving, in the end time; cf. Is 2:2-4.) Both revelations led to divine Scriptures (cf. 2 Pet 1:20 with 3:16), although later Jewish teachers generally agreed that the law had more authority than any mere voice from heaven.

1:19. The apostolic revelation in *Christ confirmed the revelations of the Old Testament prophets. Some *Dead Sea Scrolls texts present the "star" of Numbers 24:17 as messianic, and an Old Testament text describes the coming day of the Lord in terms of a sunrise (Mal 4:2) because God would come like the sun (cf. Ps 84:11). The point here seems to be that the morning star (Venus) heralds the advent of dawn; a new age was about to dawn (cf. 2 Pet 1:11), but the Old Testament plus what was revealed by Jesus' first coming was the greatest revelation the world would experience until his return in the day of the Lord. The lamp provided light until dawn. "You do well" was a common way of suggesting that a person do something (i.e., "You *ought* to do this").

1:20-21. Ancient Judaism and Greek thinkers generally viewed prophetic inspiration as a divine possession or frenzy, in which the prophet's rational mind was replaced by the divine word. (The remark on the Jewish perspective is especially true of Diaspora Jewish ecstatics, such as Philo and authors of the **Sibylline Oracles*.) The various literary styles of different Old Testament prophets indicates that this was not quite the case; inspiration still used human faculties and vocabulary (cf. 1 Pet 1:10-12; 1 Cor 7:40; 14:1-2, 14-19), although there may have been different levels and kinds of ecstasy (cf. 1 Cor 14:2; 2 Cor 5:13; 12:4; 1 Sam 10:10-11; 19:20-24). On either model, however, inspiration could protect the inspired agents from error; contrast 2 Peter 2:1.

2:1-22
Damnation of Immoral Teachers

2:1. In contrast to the inspired prophets of 1:20-21, false prophets were those who spoke visions from their own mind instead of from God's heart; in many *Old Testament texts that define them as such, they falsely promise peace for sinners destined instead for judgment (e.g., Jer 23:16-32; Ezek 13:3-10).

2:2. Sincere philosophers complained that philosophy was ridiculed on account of pseudo-philosophers; Jewish people and representatives of other minority religions also suffered from the negative publicity following wayward, profiteering members of their groups (cf. Rom 2:23-24). The same was true of early Christianity.

2:3. Traveling diviners, false prophets and moral teachers typically charged fees, found rich *patrons or begged funds and were thus frequently accused of having monetary motives unworthy of their professed callings (see comment on 1 Thess 2:5). False teachers in the *church were likewise exploiting Christians.

2:4. One of the most prominent themes of ancient Jewish tradition, though usually suppressed by the later *rabbis, was the idea that the "sons of God" in Genesis 6:1-3 were angels who lusted after women and so fell (e.g., *Dead Sea Scrolls CD 2.16-18; 4Q180 f1.7-8; **1 Enoch* 6–7; 16:2; 69:5; 106:13-15; **Jubilees* 4:22; 5:1; 7:21; **2 Baruch* 56:10-15; *Testament of Reuben* 5:6; *Philo, *That God Is Unchangeable* 1). The term for "cast into hell" here is from the Greek name Tartarus, a place not only of holding for the wicked dead (and especially the Titans, the pre-Olympian supernatural beings), but of the severest conceivable tortures; it occurs elsewhere in Jewish literature (e.g., *Sibylline Oracles* 4.186; 5.178), including as the place where the fallen angels were imprisoned (*Sibylline Oracles* 1.101-3; most manuscripts of *Pseudo-Philo's *Biblical Antiquities* 60:3; cf. the "burning valley" in *1 Enoch* 67:4, 7). Jewish writers also generally affirmed a current hell as a holding place for the wicked until the final judgment. For God not "sparing" the offspring of the angels in Noah's day or (later) Sodom (as in 2 Pet 2:4-6), see also Sirach 16:7-8.

2:5. Noah stories, like fallen angel stories, were also popular in nonrabbinic Judaism. Judgment on the fallen angels was usually linked with judgment on Noah's generation because Genesis 6 recounted both. Jewish traditions also portrayed Noah as a preacher of *repentance (e.g., *Sibylline Oracles* 1.129, 168; *Jubilees* 7:20). Jewish teachers liked to use the flood generation as an example of impending judgment to warn their own generation to repent, and they believed that the flood generation was particularly wicked and would not have a share in the world to come.

2:6. Jewish teachers often coupled Sodom with the flood generation as epitomes of wickedness ("an example"—*3 Maccabees 2:5; the rabbis frequently, e.g., Mishnah *Sanhedrin* 10:3; etc.); the Old Testament prophets also used Sodom repeatedly as an image of ultimate sin, often imitated by their own generations (cf. Deut 32:32; Is 1:9-10; 3:9; 13:19; Jer 23:14; 50:40; Lam 4:6; Ezek 16:46; Zeph 2:9).

2:7-8. Jewish tradition was quite divided on whether Lot was righteous (most of the rabbis and some others said that he was not). Genesis portrays him as personally righteous (Gen 18:25; 19:1-16); though not as wise as Abraham (13:10-11; 19:29, 32-35), he was too righteous for Sodom (19:9, 15).

2:9. In most Jewish traditions, the wicked were tortured in *Gehenna until the day of judgment (or until their annihilation, depending on which tradition one follows). In the Wisdom of Solomon 10:6, Wisdom "rescued the righteous one," Lot, when the ungodly perished in the fire of Sodom; 2 Peter probably alludes to this tradition.

2:10-11. A wide variety of Jewish texts mention those who reviled the stars of heaven or cursed *Satan or *demons (Dead Sea Scrolls 1QM 13.1-4; 4Q280 f2.2; 4Q286 f7ii.2-7; Babylonian Talmud *Menahot* 62a; cf. Sirach 21:27 LXX; *Life of Adam and Eve* 39:1). Peter's opponents have presumably adopted this practice, perhaps as a form of "spiritual warfare." (By contrast, the Sodomites [2:6] tried to molest angels but were unaware that they were angels.) Although Christians had to be concerned for their public witness—charges of subversion in the Roman Empire led to severe persecution and repression—these false teachers apparently reviled earthly authorities and the angelic authorities behind them (see comment on Eph 1:19-23).

2:12. Ancient writers regarded some an-

imals as existing only to be killed for food; here the animals are objects of the hunt. The image would not be purely rural; many urban arenas displayed the hunting of animals for sport as public entertainment. Philosophers (e.g., *Epictetus and the second-century *Stoic emperor Marcus Aurelius) characterized animals as creatures ruled by instinct as opposed to humans, who were ruled by reason, and considered unreasoning humans "wild beasts."

2:13. Reveling was part of all-night parties; accusing these people of partying in the daytime was portraying them as worse than the pagans. (The common suggestion that Peter's wording here depends on the early Jewish work called the Assumption of Moses [cf. **Testament of Moses* 7:4] is quite possible, but it is also possible that the Assumption of Moses depends on 2 Peter; the direction of dependence depends on the respective dates assigned to the two documents. It is also possible that both depend on some other source, or that the verbal parallel is coincidental.)

2:14. Some Jewish writers also spoke of adultery of the eyes; see comment on Matthew 5:27-28. Whereas philosophers spoke of moral "training" and avoidance of greed, these false teachers were "trained in greed" (NASB, NRSV). "Accursed children" (NASB, NRSV) could either represent the Semitic figure of speech for accursed ones or refer to disinherited children who received curse instead of blessing from parents.

2:15. According to Jewish tradition and the most likely interpretation of the Old Testament, Balaam was a dishonorable character. For the sake of money, Balaam had led the Israelites into cultic prostitution with the Midianites, bringing God's judgment on them and leading to his own death (Num 31:8, 16; Josh 13:22). Jewish literature considered him the ultimate prophet (and sometimes philosopher) of the pagans but did not reduce his role in Israel's sexual offense. His attempt to make Israel sin was considered worse than any other nation's military attack on them because it brought *God's* judgment against them. The contrast between "the way of Balaam" and the "right way" reflects the common ancient image of two paths, one leading the righteous or wise to life, the other leading the foolish to destruction.

2:16. Ecstatic prophets were often called "mad" or "possessed" (in the ancient Near East and ancient Israel as well as in Greco-Roman antiquity; cf. 2 Kings 9:11; Jer 29:26). But Balaam's insanity is even more evident: despite a miraculous warning through an animal that proved to be smarter than he was (cf. the implications in 2 Pet 2:12), he proceeded with his folly (Num 22:20-35). *Philo used Balaam as an allegory for foolish people; the rabbis said that people who followed in Balaam's paths would inherit hell. Jewish tradition added to the donkey's speech, in which it reproved Balaam's folly in greater detail.

2:17. Barren wells were worse than useless; they promised water in the arid East yet did not deliver on their promise. Hell was sometimes described in terms of darkness.

2:18-19. Greek philosophers often warned against being enslaved by one's passions; the image could extend to those who exploited those passions (such as prostitutes). Those defeated in battle and taken captive were enslaved. Most philosophers spoke of freedom from passion rather than freedom to indulge it; the *gospel spoke of freedom from sin, not freedom to engage in it.

2:20-21. Jewish texts often spoke of the "way of righteousness"; see comment on 2:15.

2:22. One of the proverbs Peter cites here is from the Bible (Prov 26:11, referring to a fool returning to his folly); the other proverb was extrabiblical (from a recension of the ancient story of Ahiqar) but would have been a familiar image. Both dogs and pigs were considered unclean (cf. Mt 7:6) and would have been regarded contemptuously by Jewish readers; they were also associated in other analogies like this one.

3:1-7
The Certainty of Coming Judgment

Like many Hellenized Jews and like later *Gnostics, the false teachers here played down future judgment, thus leading people to sin like the false prophets of old (chap. 2; see comment on 2:1). Now Peter turns to address the root of their immoral error directly; like many Jewish teachers, he recognizes that lack of expectation of future judgment usually led to immoral behavior or even moral relativism (see also comment on Jude 3-4). Some commentators regard chapter 3 as a letter distinct from the one in chapters 1–2, but this is un-

necessary: the transition is natural, especially in view of Peter dropping his dependence on Jude at this point.

3:1-2. On "reminder," see comment on 1:12. For Jesus' commandment here, cf. Matthew 24:42-44 (especially for 2 Pet 3:9).

3:3. Some philosophers charged that *Epicureans, who denied future judgment, lacked a basis for morality. Likewise, in much Jewish literature, those who deny the *age to come have no basis for morality (cf., e.g., Wisdom of Solomon 2:1-24; Pharisaic accusations against the *Sadducees). Ridiculing the righteous was also understood to be characteristically wicked behavior; for example, **1 Enoch* speaks of sinners who mock God, denying his revelation; the *Dead Sea Scrolls complain about those who mocked their community's righteous teacher.

3:4. Ancient writers vested "the ancestors" (NRSV) or "the ancients" with great prestige.

*Aristotle and his adherents (the Peripatetics) believed that the universe was eternal. His view caught on even outside Peripatetic circles, and *Philo had to address the idea. Epicureans denied that God acted in the world; they also believed that matter was indestructible (on the atomic level) and that the universe was infinite. The *Stoics believed that fire was eternal, that the universe would periodically be resolved into the primeval fire (see comment on 3:7) and that eternity was a cycle of ages. Whether matter was created out of preexisting substance in chaos (as in most ancient thought) or from nothing (as many find most likely in Gen 1) was debated in *Diaspora Judaism.

3:5. In Genesis 1, God created the world through his word (also Ps 33:6-9). (Some later Jewish traditions counted ten commands in Gen 1 and suggested that they represented the Ten Commandments, the word of the *law on which God founded the world.) The Greek philosopher Thales saw water as the primal element (though Peter's wording is much more ambiguous).

3:6-7. God had promised after Noah's flood (Gen 6–9) never to destroy the earth by water again (Gen 9:15; Is 54:9), but the prophets did speak of a future fiery judgment and renewal of the present world (cf. Is 65:17; 66:15, 22); they were followed on this point by later Jewish writers (e.g., Dead Sea Scrolls, **Sibylline Oracles*), some possibly influenced by Stoic conceptions. Jewish tradition thus declared that the present world would be destroyed not by water but by fire (e.g., *Josephus, *Jewish Antiquities* 1.70; Rabbi Meir, second century, Tosefta *Ta'anit* 2:13; *Life of Adam and Eve* 49:3). Jewish literature sometimes used the flood as a symbol for the future judgment by fire. Unlike the Stoics, who believed that the universe (including even the gods) would be periodically resolved into fire and formed again, Jewish people commonly hoped for a future day of judgment and then a new creation that would stand forever (2 Pet 3:10, 12-13). Though their source was the *Old Testament, on this point their view was closer to that of *Plato, who thought that the world would end once by flood and once by conflagration, rather than Aristotle.

3:8-13
The Timing of the Final Judgment

Delay should never be taken to indicate that Jesus is not coming back after all (3:4; cf. Ezek 12:27-28; Hab 2:3). Although many modern scholars think that 2 Peter addresses a second-century disillusionment with the earliest Christian *apocalyptic hope, questions over the delay of Christ's coming arguably surfaced as early as Pentecost, and the book of Revelation, at the end of the first century, still cherished apocalyptic fervor. The Dead Sea Scrolls also attest unexpected, continued deferment of hope for the day of God among the *Essenes, producing similar exhortations to endurance.

3:8. Peter appeals to Psalm 90:4 to make his point, as did many other Jewish writers of his day (who often took "the day as a thousand years" literally and applied it to the days of creation). Some apocalyptic writers lamented that God did not reckon time as mortals do and consequently urged perseverance.

3:9. The Old Testament emphasized that God delayed judgment to allow opportunity for the wicked to repent (cf. 2 Kings 14:25-27; Ezek 18:23, 32; 33:11). His patience with regard to the world's end was further emphasized in later Jewish texts like **4 Ezra* (7:74; cf. 4:33-37); in Jewish texts, one could no longer repent once the day of judgment had come. Some Greco-Roman writers also praised the mercy of God or that of the gods in delaying divine vengeance.

3:10. The day of the Lord is a familiar Old Testament image for the ultimate day of God's judgment, his final day in court when he settles the injustices of the world (e.g., Is 2:12; Joel 1:15; Amos 5:18-20). That day's "coming as a thief" refers to a saying of Jesus (extant in Mt 24:43). Different ancient thinkers had different lists of elements (the Stoics, who believed the world would be resolved into fire, had four, like most writers: earth, water, air and fire), but Peter's point is that everything will be destroyed. The destruction or purifying renewal of heaven and earth was also common in apocalyptic tradition.

3:11. As usually in the *New Testament, Peter's discussion of the future is practical and suggests how to live in the present. This focus corresponds with the motives of some apocalyptic writers but contrasts with what appear to be those of many others: impatient curiosity about the future. Those who suffered in the present order especially embraced apocalyptic hope, which gave them strength to persevere in the midst of seemingly insurmountable tests in this age.

3:12. Rabbis disagreed among themselves as to whether the end of the age was at a time fixed by God or whether it could be hastened by Israel's *repentance and obedience. In this context, Christians may hasten the coming of the end by missions and evangelism (cf. Mt 24:14), thereby enabling the conversion of those for whose sake God has delayed the end (2 Pet 3:9, 15).

3:13. This hope is from Isaiah 65:17 and 66:22, and was frequently reiterated in later Jewish literature. The Old Testament and Judaism agreed that righteousness would characterize the world to come (e.g., Is 9:7; 32:16-17; 62:1-2; Jer 32:40).

3:14-18
Preparing for the Final Judgment

3:14. Here Peter urges his hearers not to be like the false teachers (2:13). See comment on 3:11.

3:15-16. God's patience allows salvation for those on whose behalf he delays; cf. 1 Peter 3:20 on Genesis 6:3, returning to the judgment image of the flood (2 Pet 3:5-7). Calling a writer's work "hard to understand" in antiquity was not an insult (as it often is today); it could mean that it was complex and brilliant. Jewish teachers said that the message of the Scriptures could be "distorted" by misinterpreting them. Second-century *Gnostics and, in the first century, many Jewish and probably Christian groups were distorting the Scriptures, some even to play down a future judgment (perhaps by allegorizing it).

By the late first century, another early Christian writer (*1 Clement*) asserted the inspiration of Paul's letters; although Paul's early writings had undoubtedly not been collected before Peter's death, Peter may have known of some of them from his travels among the *churches. Even though Josephus and other writers asserted that Judaism had a closed *canon, some Jewish groups (such as the *Qumran community and Diaspora communities that used various recensions of the *Septuagint) seem to have had a fluid idea as to where Scripture ended and other edifying literature began. Although some scholars have reasonably used this statement identifying Paul as Scripture to argue for a post-Petrine date for 2 Peter, it would not have been impossible for the real Peter to view Paul's writings as Scripture if he accepted Paul's apostolic status and hence the possibility that some of his writings were prophetically inspired. Much that was prophetically inspired, however, never became Scripture (see "canon" in the glossary). Thus if Peter wrote these words, they reflect a remarkable insight for his day.

3:17-18. Peter's hearers are to resist the false teachers by growing in Christ. Even groups that separated humanity starkly into righteous and unrighteous or wise and foolish normally recognized the importance of the righteous or wise making progress.

1 John

Introduction

Authorship. The style of 1 John is so close to that of the author of the Gospel of John that no one questioned that they were written by the same person until the twentieth century. Some writers have pointed to minor stylistic differences and have proposed that 1 John was written by a different member of the "Johannine school." Sometimes *disciples of famous teachers would seek to imitate their teachers' works (often even their style), so this proposal cannot be ruled out on a priori literary grounds.

One can account for the minor stylistic differences, however, simply by recognizing the difference between an epistle and a Gospel; the latter *genre is literarily related to ancient biography, which went through several stages in the writing process before it was complete. Conversely, this epistle probably does not represent a major literary production (although literary epistles did exist).

One can explain the purported differences in theology and outlook by the different situation each addressed; by the standards used to suggest that the same person did not write both, different sermons of the average preacher today would often have to be attributed to different authors as well! Most important, the author claims to be an eyewitness (1:1) but does not claim to write in another's name (he provides no *pseudepigraphic preface).

Genre. The form is generally more like a homily than a letter (except 2:12-14). That the epistolary prescript (opening) and conclusion are missing need not surprise us; they were sometimes removed when letters were incorporated into collections (although 2 and 3 John retain standard elements of letters). But the document as a whole flows more like a sermon, albeit one not structured by the *rhetorical conventions of the day. It thus resembles the form of letter known as a "letter-essay," although it nevertheless addresses the specific situation of the readers.

Situation. If the setting of 1 John is the same as that of the Fourth Gospel, it is meant to encourage Christians expelled from the *synagogues, some of whose colleagues have returned to the synagogue by denying Jesus' *messiahship (2:19, 22; 4:2-3). The letter can be read in this way and makes sense on these terms.

But John was concerned about situations in cities other than those addressed in his Gospel. While Christians apparently were expelled from synagogues and betrayed by the Jewish community in Smyrna (Rev 2:9-10) and Philadelphia (Rev 3:7-9), they were tempted with the heresy of compromise elsewhere, including compromise with idolatry advocated by false prophets (Rev 2:14-15, 20-23; cf. 1 Jn 4:1; 5:21). One form of idolatry of particular concern may have been the imperial cult, to which people in the East needed to show their loyalty or, in some cities, pay serious consequences (cf. Rev 13:14-15), possibly including death (1 Jn 3:16). First John could address a community like Ephesus, where the *church had expelled the false teachers but needed love for one another (Rev 2:2-4).

On the one hand, the issue in view might be simply some false prophets (1 Jn 4:1-6) advocating compromises, perhaps even with the imperial cult to save one's life. On the other hand, the issue might be one of the movements of false teaching that was developing toward full-blown second-century *Gnosticism. Docetists believed that *Christ was divine but only seemed to become human (cf. 4:2); Cerinthians (followers of Cerinthus) believed that the Christ-Spirit merely came on Jesus, but denied that he was actually the one and only Christ (cf. 2:22). Gnostics also tended to define sin in various ways, hence some Gnostics believed that they were incapable of committing real sins, although their bodies could engage in behavior non-Gnostic Christians considered sinful. Any of the above backgrounds fits the letter itself; thus the commentary mentions all of them at relevant points below. But one point is beyond dispute: the primary troublemakers are clearly "secessionists," people who had been part of the Christian community John addresses but who had withdrawn from that community. John advocates testing the spirits by two main tests: a moral-ethical test (keeping the commandments, especially love of the Christian community) and a faith test (the right view of Jesus).

Commentaries. Among those useful for background are I. Howard Marshall, *The Epistles of John,* NICNT (Grand Rapids: Eerdmans, 1978); Stephen S. Smalley, *1, 2, 3 John,* WBC 51 (Waco, TX: Word, 1984); D. Moody Smith, *First, Second and Third John,* Interpretation (Louisville, KY: Westminter John Knox, 1991); and Robert W. Yarbrough, *1–3 John,* BECNT (Grand Rapids: Baker Academic, 2008). The most detailed commentary is Raymond E. Brown, *The Epistles of John,* AB 30 (Garden City, NY: Doubleday, 1982), although its reconstruction of the situation overreaches the evidence. A sample of my primary source material appears in Craig Keener, "Transformation Through Divine Vision in 1 John 3:2-6," *Faith & Mission* 23, no. 1 (2005): 13-22.

1:1-4
The Basis for True Fellowship

The basis for fellowship as Christians (1:3) is precisely what divided John's readers from those who had withdrawn from the community. If (as many scholars think) 1:1 alludes back to the opening of the Fourth Gospel, John speaks of God's Word that had always been (see comment on Jn 1:1-18). Although philosophers and Jewish teachers alike spoke of the divine Word, none of them spoke of the Word's becoming human. By saying that Jesus' witnesses had touched and felt him, John indicates that Jesus had been fully human; he was not simply a divine apparition like the current "manifestations" of the gods in which the Greeks believed (though merely "testifying" what one saw "with one's eyes" could be used more broadly, e.g., 2 Maccabees 3:36).

1:5-10
The Reality of Sin

It is possible that the secessionists believe, like some later *Gnostics, that they have achieved a state of sinlessness. Given the emphasis on God's holiness in this passage and later statements about the secessionists, however (3:6, 9), it is perhaps more likely that they believe, like some later Gnostics, that they are sinless in a different sense—they do not regard the sins they commit as sinful. (On the sins they are especially committing, see comment on 3:6, 9.)

1:5. Other Jewish texts (especially the *Dead Sea Scrolls, e.g., 1QM 1.1, 11) also used the light-darkness image to contrast the followers of righteousness with those of sin, regarding God as wholly righteous. The *Old Testament also affirmed that God was wholly righteous (e.g., Ps 92:15).

1:6. The Old Testament often described "obeying" God's commands as "walking" in them—so often that Jewish teachers called their view of the way Jewish people should behave *halakhah,* "walking." The image of walking about in darkness connoted the danger of stumbling (2:10-11). The Old Testament condemned mixing up light and darkness, right and wrong (Is 5:20; cf. 2:5).

1:7. Although water, not blood, cleansed in a physical sense, blood also purified in an Old Testament ritual sense (see comment on Heb 9:21-22). Sacrificial blood set apart what was sacred for God, purifying from sin by making *atonement (Lev 16:30).

1:8-10. The Old Testament prophets had often condemned false protestations of innocence as self-deception (e.g., Jer 2:35; Hos 8:2; cf. Prov 30:12); God required instead both admission of the sin and *repentance (cf. Lev 5:5; 16:21; Ps 32:1-5; Prov 28:13; Jer 3:13). (Some *synagogue prayers for forgiveness were also preceded by confessions of sin, indicating that Jewish people in the first few centuries A.D. generally recognized the idea; cf. also **Psalms of Solomon* 9:6, etc.) On cleansing, see 1 John 1:7. On the sins of the secessionists, see comment on 3:6 and 9.

2:1-11
The Moral Test

Jesus' followers were new people, and while they might not be living absolutely sinless lives yet (1:8-10), the newness of their life in *Christ would affect their lifestyles; because sin was real (1:5-10), moral behavior was a valid way of testing real commitment to Christ. This moral examination especially emphasizes the test of love (2:5, 9-11). For paradox, cf. 2:7-8. Judaism also stressed that true participants in God's covenant obeyed his commandments.

2:1. Philosophers and Jewish teachers sometimes addressed their *disciples as "children." "Advocate" often meant "intercessor" or sometimes "defending attorney." In the *Old Testament, God could plead his people's case before the nations (Jer 50:34; 51:36); in ancient Judaism, such advocates as God's mercy or Israel's merit pleaded Israel's case before God. Jesus is naturally the advocate, as elsewhere in the *New Testament (cf. Rom 8:34), because of his position, his righteousness and his work (see 1 John 2:2).

2:2. A "propitiation" (KJV, NASB) was an *atonement, a way to appease or satisfy the wrath of a God whose standard had been violated; it alludes to the sacrifices offered for atonement in the Old Testament. In Judaism, the sacrifice on the Day of Atonement was for Israel alone; but Jesus' sacrifice was offered not only for Christians but even for those who chose to remain God's enemies, leaving them without excuse.

2:3-4. In the Old Testament, Israel "knew"

God—were in covenant relationship with him—when they obeyed his commandments (e.g., Jer 22:16; 31:33-34).

2:5. One was to demonstrate love for God by obeying his commandments (Deut 6:5-6); this idea was understood throughout ancient Judaism.

2:6. Moralists commonly appealed to imitation of God or of a famous teacher in ancient moral exhortation. John here alludes to Jesus' example of sacrificial love to the point of death (Jn 13:34-35).

2:7-8. In antiquity, paradox was one graphic way of forcing an audience to think through the meaning of one's words; John uses it here ("old, not new," "but new"). The love commandment was old, always part of God's word (Deut 6:5 and Lev 19:18, cited by Jesus—Mk 12:30-31), but also new, based on a new and ultimate example (Jn 13:34). Jewish sources that used the light-darkness imagery for good and evil portrayed the present age as ruled mainly by darkness but the *age to come in terms of the triumph of the children of light (e.g., 1QM 14.17 in the *Dead Sea Scrolls).

2:9-11. Part of John's application may be that the secessionists who have withdrawn from the Christian community that John addresses have broken fellowship with true Christians, thus showing that they "hate" rather than "love" them. The Old Testament and Judaism forbade "hatred of brothers and sisters" (Lev 19:17); in a Jewish context, this language referred to fellow Jews (though cf. also 19:34); in a Christian context, it refers to fellow Christians.

2:12-14
Exhortations to Different Groups

"I am writing" is probably not intended to convey a sense different from "I wrote"; it was common to vary style to make one's writing more interesting. One could write "I have written" in a letter one was presently writing; grammarians call this convention an "epistolary aorist."

Some argue that "fathers," "young men" and "children" (John does not exclude women from consideration here but employs the language categories of his day, which used masculine forms for mixed groups) could refer to different stages of progress in the Christian faith; see comment on 2:1. More likely is that John offers age-appropriate instruction; in antiquity, some writers addressed different kinds of moral instruction to different age groups to which particular points were most relevant (e.g., Isocrates, *Ad demonicum* 44; the Greek philosopher Epicurus in Diogenes Laertius 10.122; cf. Prov 20:29; 2 Tim 2:22).

Fathers (a title often accorded older persons) held positions of honor and authority, and were respected for their wisdom (e.g., Diodorus Siculus 1.1.4; Tosefta *Avodah Zarah* 1:19). Children were in positions of learning and lacked status and authority. Young men were generally associated with strength and vigor (cf. Jn 20:4; 21:7-8; Job 33:25; Prov 20:29); here they had overcome the evil one by participating in Christ's victory (1 Jn 4:4; 5:4) over sin (3:10-12). Although some ancient writers often considered young men more vulnerable to particular temptations (passions such as anger and especially sexual immorality), John expresses his confidence in them.

2:15-17
Do Not Love the World

2:15. "The world" could refer to everything but God; here it means the world system in competition with God. Just as Israel in the *Old Testament repeatedly had to decide between allegiance to God and allegiance to the values of the pagan nations around them, the Christians scattered among the nations had to choose *Christ above whatever in their cultures conflicted with his demands. In the case of John's hearers, refusal to compromise might be a costly proposition (3:16).

2:16. The Old Testament often related the eyes to desire, especially sexual desire, and pride. Both Judaism and philosophers (e.g., *Aristotle, *Epictetus) condemned arrogant boastfulness. By listing the three vices together, it is not impossible that John alludes, as some commentators have suggested, to Genesis 3:6, although the language here is more general.

2:17. Judaism spoke of the world passing away but of God's word remaining forever (cf. also Is 40:6-8). John's words here could encourage those who preferred death for the sake of Christ over the survival that the world offered (cf. 1 Jn 3:16).

2:18-27
Discerning the Spirits: The Theological Test

John needs to assure his readers that they, not the secessionists, are true followers of God. To the ethical test (2:1-11) John now adds a theological test: they must hold the proper view of Christ. John carries on the thought of the end time (v. 18) from 2:17.

2:18. It was a common Jewish belief that evil would multiply in the end time; the duration of this period immediately preceding the end of the age was often left indeterminate (as here), although some Jewish writers assigned a specific duration to it (e.g., forty years, four hundred years). Some Jewish people also appear to have envisioned a particularly evil figure as a *high priest or ruler oppressing God's people, an idea that became much more prevalent in Christian circles (e.g., 2 Thess 2:3-4). John argues that by definition there are many "antichrists" already. (John is the only *New Testament writer to use this term. "Anti-" could mean "instead of," though John might call a substitute *Christ a "false Christ," like "false prophets" in 4:1. Cf. Paul's argument that the "mystery of lawlessness is already at work"—2 Thess 2:7.)

2:19. The Old Testament was clear that the righteous could become wicked (e.g., Ezek 18:24-26) but also that one's deeds could reveal the sincerity or falsehood of one's heart (e.g., 2 Chron 12:14). Both Greek and Jewish teachers condemned *disciples who proved unfaithful or unable to endure the tests of discipleship, frequently assuming that their initial commitment had been inadequate. Judaism recognized that many converts were false, although they regarded even more severely Jewish apostates who had once embraced but now rejected the *law.

Some New Testament texts (e.g., Jn 6:70-71; 1 Jn 2:19) may view the issue from the standpoint of God's foreknowledge, and other texts from the standpoint of the believer's experience (e.g., Gal 5:4; 1 Tim 4:1-2). But unlike many modern interpreters, ancient Jewish interpreters would not see a contradiction between these two perspectives.

2:20-21. In the Old Testament people were literally anointed with oil to perform a specific task, especially for the priesthood (e.g., Ex 29:29; 40:15) or kingship (e.g., 1 Sam 10:1; 2 Kings 9:6); the term translated "anointed" is used figuratively for those ordained by God to particular tasks. Christians had been appointed to discernment (see 1 Jn 2:27).

2:22-23. By themselves, these verses would counter equally well a non-Christian Jewish opposition and a Cerinthian opposition to Christian faith. Compromising the absolute uniqueness of Jesus as the Christ and the only way to the Father would probably permit Jewish believers to remain in the *synagogues, thus protecting them from direct challenges from the imperial cult and threat of persecution. That false prophets would advocate such compromise (cf. 4:1-6) is by no means difficult to conceive (see the introduction to Revelation). Cerinthus, who may have taught around A.D. 100, believed that the Christ-Spirit came on Jesus but was not identical to him; the late-second-century Christian writer Irenaeus also attributed this view to many later *Gnostics.

2:24-27. Many commentators hold that the "anointing" (v. 27) is the *Spirit (cf. Jn 14:17, 26; Acts 10:38); others suggest that it refers in context to the word, the message of the *gospel; in either case it alludes to the Old Testament practice of God setting particular people apart for his calling, which here applies to all believers. The Old Testament used anointing oil symbolically to consecrate or separate people (such as kings) or objects (such as the tabernacle) for sacred use. The ultimate consecration for such use arose when the Spirit came on people (Is 61:1; cf. 1 Sam 10:1, 9; 16:13).

2:28–3:3
Readiness for His Coming

As the readers have been abiding in Jesus (v. 27), so they are to continue to do (v. 28); on abiding (dwelling, remaining), see comment on John 15:1-8.

2:28. In Jewish tradition, the coming of God to judge the world would be a fearful day for those who were disobedient to his will (cf. Amos 5:18-20).

2:29. It was an ancient commonplace that children inherited the natures of their fathers. (So thoroughly was this belief held that many writers even warned that adulterers would give

themselves away, because their image would be stamped on the children of the union.)

3:1. No one who agreed with John that Christians were God's children would have disputed his point here. A younger but roughly contemporary Jewish teacher, Rabbi *Akiba, celebrated, "Beloved is humanity, since they were created in God's image; greater still is the love, that God made it known to humanity that they were created in the image" (Mishnah *Avot* 3:15). Rabbi Meir, later in the second century, proclaimed, "Beloved is Israel, for . . . they are God's children."

3:2-3. In some Greek thought, one's nature was transformed toward that of the divine by contemplating the divine; philosophers like *Plato believed that they accomplished this transformation through the vision of the mind rather than through knowledge derived through the senses. Philo agreed that one attained the vision of God mystically, because he affirmed that God was transcendent; he believed that God endowed Israel and especially the prophets with this vision, that this vision was preceded by virtue and purity of soul, and that the vision would be made complete when one was perfected. The idea also occurs in some Palestinian Jewish texts, especially in Jewish mysticism (cf. transformation through vision of the divine in **1 Enoch* 71:10-11). Perhaps more to the point, this vision of God was often associated with the end time, and some Jewish *apocalyptic thought seems to have envisioned transformation through beholding God's glory.

John may derive most of the image of transformation by beholding glory from the *Old Testament (Ex 34:29-35; see comment on Jn 1:14-18). For him, one who knows God's character purifies himself or herself accordingly, and the final and ultimate purifying will take place when one knows God perfectly at the end.

3:4-24
Which Side Are You On?

In traditional Jewish fashion, John contrasts sin and righteousness, along with those aligned with either side (3:4-9). He then explains why the unrighteous oppose the righteous, appealing to a stock Jewish illustration for this principle: the righteous love one another, but the wicked, like Cain, hate the righteous (3:10-18). This was the test that would make clear who would ultimately triumph in the day of judgment (3:19-24).

3:4. Greeks could view sin as imperfection; the Old Testament and Judaism saw it more concretely as transgression of God's *law.

3:5. Here John may use sacrificial language; cf. John 1:29. The point is that those who are in Jesus have their sins taken away, so they no longer live in them.

3:6-7. This verse again alludes to the transformative power of beholding God (cf. 3:2-3). Some commentators think that the claim to sinlessness here is ideal, "to the extent that" one abides in Christ. (In this way *Plato argued that to the extent one was a craftsman, one's craftsmanship would be perfect; but where one's craftsmanship failed, it was because one was not acting as a true craftsman at that point.) Others think it is potential: one is capable of living sinlessly (cf. Jn 8:31-36). But verse 9 is worded too strongly for either of these options.

More likely, John is turning the claims of the false teachers and their followers (1:8-10) against them: unlike those errorists who merely claim to be sinless, true believers do not live in sin. (Many commentators suggest that the present continuous tense of "sin" suggests "living in" sin, sinning as a natural way of life. This is different from one who lives righteously but sometimes succumbs to temptation or deception and genuinely repents.)

*Stoics, *Essenes and Jewish wisdom literature divided humanity into ideal types: righteous and unrighteous, or wise and foolish. All of these sources, however, recognize the imperfection of the righteous or wise; they might not fit the ideal type in all respects, but their allegiance is clearly decided.

The particular sins that dominate John's portrayal of these secessionists are violations of the two basic precepts John stresses in this letter: the right attitude toward members of the Christian community and the right view about Jesus (3:24). Thus John may mean that they commit the sin that leads to death, i.e., leading out of *eternal life (cf. 5:16-17).

3:8. In the *Dead Sea Scrolls, all sins were influenced by the spirit of error. Given the traditional Jewish view that the devil had intro-

duced sin into the world (cf. John 8:44), all sins were ultimately the devil's works and reflected his character.

3:9-10. On the claim to sinlessness, see comment on 3:6-7. Some scholars have suggested that John borrows the image of "seed" here from his opponents, since the idea is later attested among the *Gnostics; but the image was already widespread in Christian tradition (Jas 1:18, 21; 1 Pet 1:23; see comment on 1 Pet 1:23). Some thought of divine seed in humans (e.g., Ovid, *Fasti* 6.5-6; *Seneca, *Epistle to Lucilius* 73.16; *Epictetus, *Discourses* 1.9.4-6), an idea Christians could adapt for those born from the *Spirit. A child was believed to inherit his or her father's nature through the seed, hence John is able to use this image to make his point: those who are born from God through conversion reflect his character now in them, and those who are not reveal this by their nature as well. In the Old Testament one could overcome sin by the word written or dwelling in one's heart (e.g., Deut 30:14; Ps 119:11; Jer 31:32-33).

3:11-13. Cain's murder of Abel is often rehearsed with little adornment in Jewish tradition; at other times, Jewish tradition expounds on Cain's wickedness in great detail. He became a stereotypical prototype for wickedness (e.g., **Jubilees* and **1 Enoch*; *Pharisees sometimes associated Cain with the *Sadducees and their denial of the life to come); one pre-Christian Jewish text calls him "the unrighteous one" (Wisdom of Solomon 10:3). Philo used Cain repeatedly as a symbol of self-love and made him an illustration that "the worse attacks the better," as here (cf. Gal 4:29). Some later antinomian Gnostics took Cain as a hero.

Murder of a brother was considered one of the most hideous crimes possible in antiquity (so, e.g., *Cicero, Horace); John applies "brother" or "sibling" to any member of the Christian community. A murderer was a child of the devil (3:10), for one of the devil's first works had been to bring death to Adam (see comment on Jn 8:44); some later rabbinic texts claim that Cain's father was a bad angel, even the devil himself. Sibling rivalry (Gen 37:8; 1 Sam 17:28) was normally outgrown, but Cain's act did not allow that to happen.

3:14-15. Murder was a capital offense under Old Testament law and thus merited *Gehenna in post-Old Testament Jewish thought. Jesus included as murder the attitude that generated the literal act (cf. Mt 5:21-22).

3:16. John's hearers might anticipate persecution and the possibility of death, although few had actually been martyred so far (Rev 2:13). Refusal to participate in the worship of the emperor would brand them as subversives, and their enemies would be more than happy to betray them to the government as such. Since noncitizen prisoners were sometimes tortured for information, especially if they were slaves, Christians might have to pay a tremendous price to avoid betraying their fellow Christians to death.

3:17. In addition to being ready to sacrifice one's life for fellow believers (3:16), John also demands of them a practical commitment to love in the present. Their opponents, who had withdrawn from the community, perhaps to avoid persecution, are responsible for others' deaths as Cain was; but the true Christians are to live sacrificially on behalf of others daily. As in some Jewish thought, withholding goods from someone in need was equivalent to starving him or her (cf. Jas 2:15).

3:18. Ancient literature often coupled "word" and "deed" (e.g., in Isocrates, Demosthenes, *Quintilian, Seneca, *Lucian, Wisdom of Solomon); one who did both was praised, but one who only spoke and did not act accordingly was viewed as a hypocrite.

3:19. The Dead Sea Scrolls sometimes called the righteous "children of truth" or "the lot of God's truth" (1QS 4.5; 1QM 13.12; 1QHa 17.35; 18.29; 19.14).

3:20-21. Judaism repeatedly stressed that God knew the hearts of all people (cf. Jer 29:23); some texts even call him "searcher of hearts." As one Jewish wisdom writer expressed it, "Happy is the one whose soul does not accuse him" (Sirach 14:2).

3:22-24. John's practical interest in this subject may be because these commandments are precisely those that the secessionists are violating: by leaving the Christian community they have demonstrated their lack of love for their supposed brothers and sisters, and by not believing Jesus as the only true *Christ (2:22) they have failed the faith test as well. On the promise of answered prayer, see John 14:12-14.

Most Jewish people did not believe that the Spirit (1 Jn 3:24) was available to many in the present age (the *Essenes, like the Christians, were apparently rare in this regard).

4:1-6
Testing the Spirits

4:1. Judaism especially associated the *Spirit of God with *prophecy but acknowledged the existence of false prophets, who John says are moved by other spirits. His readers would understand his point; Jewish people were familiar with the idea of other spirits besides the Spirit of God (see especially comment on 4:6). There were many pagan ecstatics in Asia Minor, as well as Jewish mystics claiming special revelations; the need for discernment would be acute.

4:2-3. The issue may be the secessionists' denial that Jesus has come as the Christ (if the opposition is Jewish); or it might be a Docetic denial that Jesus was actually human and actually died (see introduction), a heresy an eyewitness would be well positioned to refute. It may simply be a relativizing of Jesus' role to the position of a prophet like John the Baptist, which allows enough compromise to avoid persecution. Perhaps they deny the Jesus who is known from the eyewitness material in the Fourth Gospel. Whatever the error, the secessionists are claiming the authority of inspiration for it, as do some similar groups today. John does not deny the reality of the inspiration; he merely denies that the spirit working in them is God's Spirit.

4:4-6. The *Dead Sea Scrolls similarly distinguish between God's children and the rest of the world, though they go far beyond John in asserting that every act is determined by either the spirit of truth or the spirit of error. (The language of "two spirits" probably extended beyond the Dead Sea Scrolls, although the best attestation outside the Scrolls is in the *_Testaments of the Twelve Patriarchs_. These testaments contain a number of references to spirits of falsehood, but the closest to 1 John 4:6 is _Testament of Judah_ 20, which, with the _Testament of Levi_, is one of the testaments most often suspected of harboring Christian interpolations. Thus the issue is not settled, although the _Testament of Judah_ reference is _probably_ not Christian, reflecting an idea similar to the general Jewish doctrine of the two impulses, which the *rabbis especially developed and expounded; on this doctrine, see comment on Rom 7:15-22.) The promise that the one with them was greater than the one with the world (1 Jn 4:4) recalls an *Old Testament principle (2 Kings 6:16; 2 Chron 32:7-8).

4:7-21
The Test of Love

4:7-10. Again (3:9-10) John argues that one's nature shows one's spiritual lineage; those who are like God are his children, and God's supreme characteristic is his love, revealed in the cross of Christ. The secessionists proved their lack of love by withdrawing from Christian fellowship. On propitiation, see comment on 2:2.

4:11-12. Even true Christians' love had to be perfected, but unlike the secessionists, they had remained within the Christian community, thus maintaining a commitment to love one another. The false teachers may have been claiming to have had mystical visions of God (see comment on 3:2-3; 4:1), but John includes a corrective: God was unseen (Ex 33:20), and the sense in which believers could envision him is in his character of love fleshed out in the cross (4:9) and in Christians' sacrificial love (4:12).

4:13-16. Although the *Qumran community as a group claimed to possess the *Spirit, most of ancient Judaism relegated the Spirit's most dramatic works to the distant past and future, or to very rare individuals. John could speak of the first witnesses, but for him also who prophetically endows them to testify the truth about *Christ (see comment on 4:1).

4:17. In the *Old Testament (e.g., Amos 5:18-20) and Judaism, "the day of judgment" was something to be feared by the disobedient (2:28). But those who continued in love could be confident of acquittal before God's tribunal in that day, for they are agents of his unselfish love.

4:18. It was understood that sin often leads to fear (e.g., Gen 3:8; *_Letter to Aristeas_ 243). Although *Stoic philosophers emphasized not fearing anything, because circumstances cannot ultimately destroy one's reason, in this context John's assurance that true believers need not fear is not explicitly directed toward

all circumstances. His assurance applies specifically to punishment in the day of judgment (4:17).

4:19. The Old Testament also recognized that God's people learned how to treat others from God's gracious treatment of them (Ex 13:8; 22:21; Lev 19:34; Deut 10:19), although the ultimate expression of the principle is the example of Christ (1 Jn 4:10; cf. Jn 13:34).

4:20-21. Principles like arguing on the basis of what was near at hand rather than from something related to the gods (e.g., *Plutarch) and that a new friend would treat you as he had treated others (e.g., the fourth-century B.C. *rhetorician Isocrates) were also recognized by others in antiquity. In the Old Testament, God accounted behavior toward those who could not repay it as if it were done to him (Prov 19:17; cf. Deut 15:9).

5:1-13
Triumph and Life Through Faith in Jesus

5:1. Families were often viewed as a unit, hence one could not love one member of a family while despising other members. (This principle of group allegiance extended even to friendship networks.) This verse may also reflect the idea that children bear their parents' nature.

5:2. On love being demonstrated actively, compare 3:18.

5:3. God's commandments had never been too heavy for those in whose hearts they had been written (Deut 30:11-14). Many Jewish teachers regarded some parts of the *law as "heavier" or "weightier" than others (as in Mt 23:23), but they meant that some were more crucial for daily life, not that any of them were too hard to keep.

5:4-5. The image of achieving "victory" was used in military, athletic, debate and courtroom situations but always involved a conflict or test. John calls his readers to "overcome" or "triumph" in the face of opposition, persecution and possible martyrdom (perhaps including suffering for refusal to compromise with the imperial cult).

5:6-13. Many scholars have suggested that the secessionists, like Cerinthus and some later *Gnostics, said that the Christ-Spirit came on Jesus at his *baptism but departed before his death; or that, like the Docetists and some later Gnostics, the secessionists believed that Jesus was actually baptized but could not actually die, being eternal. It is also possible that some Docetists saw in the "water and blood" of John 19:34 the picture of a demigod: Olympian deities in Greek mythology had ichor, a watery substance, instead of blood. Thus they may have stressed his divinity at the expense of his humanity. The reference could also be more general than any of these suggestions.

In any case, ancient sale documents sometimes included the signatures of several witnesses attesting a sale, and the *Old Testament and later Jewish courts always required a minimum of two dependable witnesses (Deut 17:6; 19:15). John cites three witnesses whose reliability could not be in dispute. (The trinitarian formula found in the KJV of 1 Jn 5:7 is orthodox but not part of the text. It appears in only four manuscripts—of the twelfth, fifteenth, sixteenth and seventeenth centuries [the last in a marginal note]—out of the thousands available, placed there by *scribes who knew it from the Latin Vulgate, which took it from an early marginal note based on a popular early interpretation of the text. The KJV includes it only because that translation was based on a recension dependent on the third edition of Erasmus's Greek text; Erasmus included the verse to fulfill a wager, protested it in a note and withdrew it in subsequent editions of the text.)

5:14-21
Avoiding Sin

5:14-15. For background applying to the general principle in these verses, see comment on John 14:12-14. But the specific issue emphasized here might be prayer for an erring brother or sister, undoubtedly including one attracted to the false prophets' ideas (4:1-6); see 5:16-17 (cf. Mt 18:15-20).

5:16-17. Given the use of "life" for *eternal life and "death" for its opposite in this epistle, a "sin unto death" (KJV) would seem to be a sin leading one away from eternal life (cf. Gen 2:17; 3:24). The two sins John would likely have most prominently in mind would be hating the brothers and sisters (the secessionists' rejection of the Christian community) and

failing to believe in Jesus rightly (their false doctrine about his identity as the divine Lord and *Christ in the flesh); see comment on 3:23.

The *Old Testament and Judaism distinguished between willful rebellion against God, which could not be forgiven by normal means, and a lighter transgression. More relevant here, some ancient Jewish texts (e.g., *Dead Sea Scrolls CD 9.6, 17; **Jubilees* 21:22; 26:34; 33:18; cf. the Hebrew of Deut 22:26) also spoke of a capital offense as "a matter of death," which was normally enforced by excommunication from the community rather than literal execution. Those who were sinned against could secure forgiveness for their opponents by prayer (Gen 20:7, 17; Job 42:8), but a sin of willful apostasy from God's truth nullified the efficacy of secondhand prayers for forgiveness (1 Sam 2:25; Jer 7:16; 11:14; 14:11). John is presumably saying: God will forgive erring believers at your request, but those who have gone completely after this severely false teaching are outside the sphere of your prayers or (on another interpretation) simply must directly repent to receive forgiveness.

5:18. *Satan could not touch Job without God's permission (Job 1:11-12; 2:3-6). Judaism recognized that Satan needed God's permission to test God's people, and that God rejected Satan's accusations against God's own people.

5:19-20. Judaism acknowledged that all the nations except themselves were under the dominion of Satan and his angels. The source of this idea is not hard to fathom; nearly all *Gentiles worshiped idols, and most also practiced sexual immorality and other sins.

5:21. "Idols" could refer to anything that led astray from proper worship of the true Lord (thus "idols of one's heart" might mean falsehoods or sins in 1QS 2.11 in the *Dead Sea Scrolls; cf. antichrist in 1 Jn 4:3). A literal meaning (physical images of false gods) makes good sense to a congregation in Asia Minor. It could include worshiping the image of the emperor, to which many Christians were eventually required to offer incense to show their loyalty to the state (Pliny, *Epistles* 10.96). It could also refer to compromise with idolatry in a broader sense—Asia Minor afforded plenty of temptation for former pagans, such as food offered to idols. Ancient Jewish texts often condemned idolatry as the worst sin—surely a capital offense or a "sin unto death" (5:16-17); if the false prophets in 4:1-6 are like other false prophets affecting Asian *churches in this period (Rev 2:20), the idolatry may well be literal; see comment on Revelation 2:14; 9:20; 13:12 and 15.

2 John

Introduction

Authorship, Date. See the introduction to 1 John and to the Gospel of John; there is little stylistic difference between 1 and 2 John. Although John himself might send a shorter personal letter resembling a longer one he had previously written, it is unlikely that a forger would try to produce such a short document that added so little to the case found in 1 John. Further, a later forgery of 2 John (or 3 John) would have drained it of its authority for the audience, since the contents of 2 and 3 John indicate that the hearers knew the writer personally.

Nature of the Letter. Second John may function as an official letter, the sort that *high priests could send to Jewish leaders outside Palestine. The length is the same as that of 3 John; both were probably limited to this length by the single sheet of papyrus on which they were written. In contrast to most *New Testament letters, most other ancient letters were of this length.

Situation. Second John addresses the problem of the same secessionists that 1 John addressed. The secessionists' inadequate view of *Christ was probably either a compromise with *synagogue pressure (see the introduction to Gospel of John) or a relativization of Jesus to allow more compromise with paganism (see the introduction to Revelation)—probably the latter. For the secessionists, Jesus was a great prophet like John the Baptist and their own leaders, but he was not the supreme Lord in the flesh (cf. 1 Jn 4:1-6; Rev 2:14, 20). Some propose that they may have been affiliated with or forerunners of Cerinthus (who distinguished the divine Christ and the human Jesus, like some modern theologians) or the Docetists (who claimed that Jesus only seemed to be human). All these compromises helped the false teaching's followers better adapt to their culture's values what remained of Christianity after their adjustments, but led them away from the truth proclaimed by the eyewitnesses who had known Jesus firsthand.

Commentaries. See the introduction to 1 John.

1-3. "Elders" were given authority in local Jewish communities by virtue of their age, prominence and respectability; age was respected. John assumes this simple title (cf. 1 Pet 5:1) rather than emphasizing his apostleship here. The "chosen lady" (NASB, NIV) or spiritual mother could refer to a prophetess/elder (cf. 3 Jn 4; contrast Rev 2:23). But it more likely refers to a local congregation here (see v. 13); both Israel and the *church were portrayed as women.

4-6. The commandment John mentions here was an old one because it was in the *law (Lev 19:18), although Jesus' example gave it new import (Jn 13:34-35). In the context of 1–2 John, "loving one another" includes cleaving to the Christian community (rather than leaving it, as the secessionists were doing).

7-9. See discussion in the introduction.

10. Guests were to be accorded hospitality and travelers to be put up in hosts' homes (cf. 3 Jn 5-6; it is possible, though not certain, that the houses in question here may also be house churches); early Christian missionaries had depended on this hospitality from the beginning (Mt 10:9-14). Traveling philosophers called sophists charged fees for their teaching, as some of Paul's opponents in Corinth probably did.

But just as Jewish people would not receive *Samaritans or those they considered impious, so Christians were to exercise selectivity concerning whom they would admit. Early Christian writings (particularly a text of mainly authoritative traditions known as the *Didache*) show that some prophets and *apostles traveled around, and that not all of them were true prophets and apostles. Greetings were an essential part of social protocol at that time, and the greeting ("Peace be with you") was intended as a blessing or prayer to impart peace.

11. In the *Dead Sea Scrolls, one who provided for an apostate from the community was regarded as an apostate sympathizer and was expelled from the community, as the apostate was. Housing or blessing a false teacher was thus seen as collaborating with him.

12. "Paper" is papyrus, made from reeds and rolled up like a scroll. The pen was a reed pointed at the end, and the ink was a compound of charcoal, vegetable gum and water. Written letters were considered an inferior substitute for personal presence or for a speech, and writers sometimes concluded their letters with the promise to discuss matters further face-to-face.

13. It was common to send greetings from those near the sender. For the "sister," see comment on the "chosen lady" of verse 1.

3 John

Introduction

This is a "letter of recommendation" for Demetrius, a traveling missionary (vv. 7-8) who needs to be put up by a local *church while he is evangelizing in their area (cf. comment on Mt 10:11-13, 40-42). For authorship and date, see the introduction to 2 John. For the first three centuries of the church's existence, congregations usually met in homes; for further details on this practice, see Romans 16:5. In this letter to Gaius, a house-church leader, John is apparently attempting to counter the opposing influences of Diotrephes, a different house-church leader who is asserting his own authority and rejecting emissaries backed by John's apostolic authority.

Commentaries. See the introduction to 1 John.

1-2. This is a standard greeting in many ancient letters, which quite often began with a prayer for the reader's health, frequently including the prayer that all would go well with the person (not just material prosperity, as some translations could be read as implying). This greeting might be similar to saying "I hope you are well" today, but it represents an actual prayer that all is well with Gaius (see comment on 1 Thess 3:11). "Gaius" was a common name.

3-4. Rabbis and philosophers sometimes spoke of their *disciples as their "children"; here John probably intends those he brought to *Christ (cf. Gal 4:19 and perhaps the later Jewish tradition that when someone made a convert to Judaism, it was as if the converter had *created* the convert).

5-6. Hospitality was a critical issue in the Greco-Roman world, and Jewish people were especially concerned to take care of their own. Most inns also served as brothels, making a stay there unappealing, but Jewish people could expect to find hospitality from their fellow Jews; to prevent abuse of this system, they normally carried letters of recommendation from someone the hosts might know to substantiate their claim to be good Jews. Christians had likely adopted the same practice.

7-8. Philosophers and sophists (traveling professional speakers, which is how many observers in the Greco-Roman world interpreted traveling Christian preachers) often made their livings from the crowds to whom they spoke, although others took fees or were supported by wealthy *patrons. Like Jewish people, Christians showed hospitality to travelers of their own faith, and these traveling preachers were dependent on this charity. Jewish people spoke of the sacred "Name" of God; John is apparently applying this title to Jesus.

9-11. Diotrephes is apparently leader of another house church; he refuses to show hospitality to the missionaries who have letters of recommendation from the elder. Scholars have speculated whether the issue was doctrinal disagreement, disagreement over church leadership structure or that Diotrephes was simply outright disagreeable; at any rate, he refuses to accept the authority of John that stands behind the missionaries he backs. To reject a person's representatives or those recommended by a person was to disrespect the person who had written on their behalf.

12. This is the recommendation for Demetrius, who has not only John's attestation but that of the rest of his home church(es). (For letters of recommendation, see comment on 2 Cor 3:1.) No one in Diotrephes's house church will receive him, so Gaius's house church must help him.

13-15. Sometimes ancient letters closed as John does here. Most letter writers employed *scribes, and if John is writing by hand, he may well wish to close quickly. See comment on 2 John 12. If "friends" is here a title for a group, it probably refers to fellow Christians in the place from which the elder is writing; these Christians may have borrowed the idea from the *Epicureans, whose philosophical communities consisted especially of "friends."

Jude

Introduction

Authorship. Although a pseudepigrapher would want to clarify which Jude he was (i.e., Jesus' brother) or to write in the name of someone more prominent, this author does not specify which Jude he is, making it probable that the letter was genuinely written by Jude. At the same time, his lack of clarification as to which Jude he is and the fact that he seems to be already known to his audience (vv. 3, 5) suggest that he is the most prominent Jude, brother of the most prominent James—the younger brother of Jesus (Mk 6:3). Early *church tradition varied on which Jude wrote the letter, but this is the only Jude specifically known to us whose brother was called James. His Greek is sophisticated, but the thought world he shares with his readers is that of popular Judaism; for a Palestinian Jew's knowledge of Greek or the availability of scribal help, see the introduction to James.

Situation. The letter clearly opposes false teachers whose sexual lifestyles are immoral and who are teaching arrogantly. The thought world of Jude and his readers is popular Judaism; his opponents may be rooted in the same Jewish-Christian tradition that Jude is, but they have also sought to assimilate many values of immoral pagan culture. Given Jude's heavy use of **1 Enoch*, that book may represent a tradition cited by his opponents, who apparently appeal to their own mystical visions as divine revelations like Enoch's (v. 8).

Genre. This may be a letter-essay, a letter used as a sermon. Letters were meant as substitute speeches or surrogates for the presence of the writer.

Commentaries. Excellent commentaries include R. J. Bauckham, *Jude, 2 Peter,* WBC 50 (Waco, TX: Word, 1983), and (easier for those without Greek) J. N. D. Kelly, *A Commentary on the Epistles of Peter and Jude,* BNTC (reprint, Grand Rapids: Baker Academic, 1981).

1-2
Introduction

Jude's lack of elaboration on his office suggests that he is the well-known Jude, brother not only of James but of Jesus as well. Although a son of Joseph and Mary, he now describes his half-brother Jesus as "Lord" rather than as brother. On "slave," see comment on Romans 1:1.

3-6
Falling from Grace

3-4. At least part of the error that Jude addresses resembles that proclaimed by false prophets in the *Old Testament: judgment would not come on God's people because of his special favor for them—a teaching that led to sin (Jer 6:14; 8:11; 23:17; Ezek 13:10, 16; Mic 3:5). Biblical *grace means forgiveness and power to overcome sin, not permission to act immorally. Ancient writers often applied the language of battle or athletic contests ("contend") to spiritual or moral battles.

5. All Jewish hearers and even most recent *Gentile converts to Christianity knew the exodus story. That people had experienced God's redemption did not guarantee that they could not fall away and be destroyed.

6. In Jewish tradition (except most of the *rabbis), the "sons of God" in Genesis 6:1-4 were fallen angels who left their assigned place to have intercourse with women (see comment on 2 Pet 2:4). In the earliest of these traditions, *1 Enoch*, the fallen angels were imprisoned and bound (e.g., 10:11-14; 18:15-16; 21:3-6); Azazel was thrown into "darkness" (10:4), which was applied to the realm of the dead in much ancient tradition. First Enoch (22:11; 54:6; 84:4) uses "great day" for the day of judgment. Cf. Wisdom of Solomon 17:17 (and 17:2).

7-16
Sin and Judgment

7. Already in the Old Testament and even more so in later Jewish tradition, Sodom came to be viewed as the epitome of wickedness. "Strange flesh" (KJV, NASB) here could mean angelic bodies, but because Jewish tradition would not call angels "flesh" and the Sodomites did not realize that the guests were angels (Gen 19:5), Jude may have their attempted homosexual acts in view. ("Strange" flesh is literally "other" flesh, but this may mean "other than what is natural," rather than "other than their own kind." Then again, "in the same way" as those of v. 6 might imply angels and people having intercourse with each other. Apart from Philo, few ancient Jewish writers stressed the Sodomites' homosexual behavior; most instead stressed their lack of hospitality, arrogant sin or sexual immorality in general, which in the Jewish perspective included but was not limited to homosexual acts.)

8. "Dreaming" probably refers to the dreams of false prophets, who produce falsehood while claiming to speak truth (Jer 23:25); angelic "majesties" (literally "glories"; cf. NRSV) refers to the various ranks of angelic hosts, to which God has assigned authority over nations, nature and so on in Jewish tradition. Disrespect for earthly authorities and the spiritual powers behind them appointed by God would cause Christians to be labeled as subversive and encourage widespread persecution of them in the Roman Empire. (Some scholars have also suggested that they reviled these angels as the angels through whom God gave the *law, because of their antilaw stance, but it is not clear that they argued for their immorality primarily on the basis of their rejection of the law.)

9. Michael (Dan 10:13, 21; 12:1) and Gabriel (Dan 8:16; 9:21) are the only two angels named in the Old Testament (though others were soon added, e.g., Tobit 5:4; 2 Esdras 4:36), and they naturally became the two most popular angels in contemporary Jewish lore, with Michael as Israel's guardian and generally the most prominent archangel.

Jewish traditions about Moses' death (or lack of it, despite Deut 34) varied widely, and this report seems to have been one of these versions. In the Old Testament and Jewish literature, the devil acted as an accuser; here the great archangel Michael did not challenge his accusations; he deferred the issue to God the supreme judge. God's angelic messenger also cries, "The Lord rebuke you" in defending the *high priest in Zechariah 3:2.

10. The false teachers, however, were ridiculing angelic powers, probably including *Satan. The *Dead Sea Scrolls show that some people cursed Satan (see comment on 2 Pet 2:10-11), but Jude does not approve of that. In-

stead, he seems to agree with the moral embodied in a later rabbinic story: a man named Pelimo went around making fun of the devil until one day the devil showed up and chased him into a bathhouse, whereupon he learned his lesson (Babylonian Talmud *Qiddushin* 81ab); cf. also the saying in Sirach 21:27 LXX. Christians also should not speak authoritatively on secret or esoteric matters God has not chosen to reveal (cf. Deut 29:29).

11. More than in the Old Testament, in Jewish tradition Cain (see comment on 1 Jn 3:12) and Balaam (see comment on 2 Pet 2:15) had become symbolic for leaders of wickedness. Balaam was regarded as one of the most powerful prophets, as prophet of the *Gentiles, but he used his powers for evil, enticing Israel to sin so they would be judged. Korah revolted against the leadership of Moses (Num 16) and became a standard figure for rebelling against the law in Jewish tradition.

12. The Last Supper was a full Passover meal, and the early *church had continued the tradition of celebrating a meal ("the Lord's Supper") of which bread and wine were only a part. Communion as a full meal was apparently also called a "love feast."

"Concealed rocks" (or "hidden reefs"—NASB) were deceptive and killed sailors who failed to navigate their vessels away from them; empty clouds promised rain to needy farmers but delivered nothing (Prov 25:14). The image of trees may be because harvesting would be complete by late autumn, when many trees shed their leaves before the advent of winter; or it may mean that they did not bear summer fruit and showed no signs of fruitfulness by early autumn; in any case, these trees were plainly dead (on the future second death, see comment on Rev 2:11).

13. In Greek tradition, Aphrodite, goddess of desire, was produced from sea foam at the castration of the Titan Uranos (alluding to the teachers' immorality); probably more relevant, waves appear in the Dead Sea Scrolls as an image of casting up the filth of sin. "Wandering stars" referred to the erratic orbits of planets, sometimes attributed to disobedient angels, who were to be imprisoned under God's judgment and are called "stars" in **1 Enoch*. Judgment as eternal darkness appears in *1 Enoch* and elsewhere. The wicked as raging waves appear in Isaiah 57:20 and in subsequent Jewish tradition (Dead Sea Scrolls).

14-15. Jude quotes from *1 Enoch* 1:9, citing a popular story that is still extant to make his point. This passage in *1 Enoch* represents some themes that run throughout that section of Enoch.

16. "Grumblers" may allude to Israel's murmuring in the wilderness, but especially to the wrong speech ("defiant words"—NIV) of verse 15, expounding the citation from *1 Enoch*. Ancient moralists repeatedly condemned flattery and advocated forthright speech; politicians commonly used flattery to win people over with speeches, and flattery was a necessity for subordinates of many emperors to survive. Jude had already addressed both their lusts (vv. 6-8b) and arrogant speech (vv. 8c-10).

17-25
Call to Persevere

17-19. Later *Gnostics claimed to be spiritual, thinking that others were at best "worldly" (NASB, NRSV) or "natural" (NIV); under the influence of certain kinds of Greek philosophy, some false teachers may have been already moving in this direction. More important, because the false teachers claimed to be prophetically inspired (v. 8), they no doubt laid claim to the *Spirit (cf. comment on v. 20), but Jude says that they are altogether lacking in the Spirit.

20-21. Because the *Holy Spirit was usually viewed as the Spirit of *prophecy, "praying in [or by] the Holy Spirit" probably means inspired prayer (1 Chron 25:3; Psalms), likely including (though not necessarily limited to) tongues (cf. comment on Acts 2:4; 1 Cor 14).

22-23. Some of the language here is from Zechariah 3:2 and 4, but the reference is to those being led astray and others who are already astray or false teachers themselves, who are dangerous.

24-25. Jude closes with praise, as would be common in a *synagogue service; the emphasis is that, for all the danger of falling away (vv. 3-23), God is able to keep believers secure and persevering.

Revelation

Introduction

Authorship. Many scholars attribute the Fourth Gospel and Revelation to a common circle (for circles of literary production around an author, see the introduction to 1 John). Nevertheless, scholars also comonly argue that different authors wrote them; many do not even entertain the *possibility* that both were written by the same person. The style of Revelation is quite different from that of the Fourth Gospel, so some scholars as early as several centuries after their writing denied that they could have been written by the same author. Nevertheless, their connection should not be dismissed. Most of early *church tradition attributes both documents to John the *apostle; the argument that Revelation was written by him is certainly strong (see comment on 1:1; for the Fourth Gospel's authorship, see the introduction to John).

A close examination of the works indicates that much of the vocabulary is the same, though used in different ways; theological communities and schools (see the introduction to 1 John) usually share perspectives more than vocabulary, whereas authors may adapt their style to the *genre in which and the situation for which they write. If one accepts common authorship, one can account for most of the stylistic variations on the basis of the different genres of the two works: Gospel and *apocalypse (Revelation's style borrows heavily from Ezekiel, Daniel, Zechariah, etc.). That a single community could produce and embrace both a Gospel (even one emphasizing the present experience of future glory) and an apocalypse is not difficult to believe; the *Dead Sea Scrolls contain similarly diverse documents. That a single writer could embrace multiple genres is no less possible (compare, e.g., *Plutarch's *Lives* and his *Moralia* or *Tacitus's *Histories* and *Dialogues,* though their differences in genre and style are less pronounced than those between the Fourth Gospel and Revelation).

Date. Some scholars have dated Revelation in the late 60s, shortly after Nero's death, as several emperors in a row quickly met violent deaths (cf. 17:10). In the book of Revelation, however, the emperor's power seems to be stable, and this situation does not fit the 60s. Similarly, the imperial cult in the Roman province of Asia

(western Turkey) directly threatens some of John's circle of churches; this situation fits the period of the 90s better. The church also seems to be entrenched (and sometimes prosperous) in the major cities of Asia; thus a date in Domitian's reign in the 90s of the first century, reported in early church tradition and still preferred by most scholars, seems more likely.

Genre. Revelation mixes elements of *Old Testament *prophecy with a heavy dose of the apocalyptic genre, a style of writing that grew out of elements of Old Testament prophecy. Although nearly all its images have parallels in the biblical prophets, the images most relevant to late-first-century readers, which were prominent in popular Jewish revelations about the end time, are stressed most heavily. Chapters 2–3 are "oracular letters," a kind of letter occurring especially in the Old Testament (e.g., Jer 29:1-23, 29-32) but also attested on some Greek pottery fragments.

Although the literary structure of such documents may have been added later, many scholars argue that many Jewish mystics and other ancient mantics believed that they were having visionary or trance experiences. Like the Old Testament prophets he most resembles, John may have experienced real visions and need not use them only as a literary device. (The apocalypses are usually pseudonymous, thus it is difficult to be certain to what extent they reflect religious experience. But other accounts of Jewish mystics seeking to invade heaven in visionary ascents—see comment on 2 Cor 12:1-4—and anthropologists' reports on the commonness of ecstatic trance states in a variety of cultures around the world today allow that many such experiences were genuine. Early Christians generally accepted the reality of pagan inspiration as a phenomenon but attributed it to the demonic realm, while viewing their own inspiration as continuous with that of the Old Testament prophets. They held that there are many spirits in the world, but not all of them are good—1 Jn 4:1-6.)

Structure. After the introduction (chaps. 1–3), the book is dominated by three series of judgments (seals, trumpets, bowls), probably concurrent (they all culminate in the end of the age), and snapshots of worship in heaven (chaps. 4–16), then oracles against Rome (chaps. 17–18) and prophecies of the end (chaps. 19–22). The judgments may cover the (probably symbolic, but possibly deferred) period of 1,260 days to which the book repeatedly alludes (see especially comment on 12:6—if symbolic, this period might span history between Christ's first and second comings). The book is in logical rather than chronological sequence; John may report the visions in the sequence in which he has them, but every time he notes "And I saw/heard," he is receiving a new image. The new image, while connected with what preceded, need not always report an event that follows it chronologically.

Interpretations. There are several major categories of interpretation of this book: (1) Revelation predicts in detail the course of human history till the Second Coming, (2) Revelation reflects the general principles of history, (3) Revelation addresses only what was happening in John's day, (4) Revelation addresses only the

end time and (5) combinations of the above approaches (e.g., John addresses the principles of history in view of the ever-impending end time until it arrives, and originally articulated these principles to speak to the situation of his late-first-century readers).

Many interpreters of John's day (especially interpreters in the Dead Sea Scrolls) reread Old Testament prophecies as symbols describing the interpreters' own generation, and the book of Revelation has similarly been reinterpreted by modern prophecy teachers in every decade of the past century. (For a sober rehearsal of the continual modification of prophecy teachers' predictions with each new series of events in the past century, see Dwight Wilson, *Armageddon Now!* [Grand Rapids: Baker Books, 1977]; for a longer historical perspective, see Richard Kyle, *The Last Days Are Here Again* [Grand Rapids: Baker, 1998]; Stanley J. Grenz, *The Millennial Maze* [Downers Grove, IL: InterVarsity Press, 1992], pp. 37-63.)

Some prophecy teachers have interpreted and reinterpreted Revelation according to the whims of changing news headlines; thus "kings of the East" (16:12) went from being the Ottoman Empire to imperial Japan to Communist China to Iraq, depending on the political needs of the Western interpreters. But John's images would have meant something in particular to their first readers, and this commentary therefore investigates that sense, following the same procedure for interpretation that it follows elsewhere in the *New Testament. Thus it directly addresses the third category of interpretation mentioned above, although this data can be combined with the second category (as it often is for preaching) and, in a sense that becomes clear in the course of the commentary, the fourth (and thus fifth) category.

Method of Interpretation. John wrote in Greek and used Old Testament, Jewish and sometimes Greco-Roman figures of speech and images; he explicitly claims that he writes to first-century churches in Asia Minor (1:4, 11), as explicitly as Paul writes to first-century churches. Whatever else his words may indicate, therefore, they must have been intelligible to his first-century audience (see comment on 1:3; 22:10). Ancient hearers had no access to modern newspapers, the basis for some popular methods of interpretation; but subsequent generations have been able to examine the Old Testament and first-century history while studying the book. Historical perspective therefore makes the book available to *all* generations.

This perspective does not deny Revelation's relevance for readers today; to the contrary, it affirms that its message is relevant to every generation, although it uses the symbolism familiar to the generation of its first readers. (Thus, for example, future opponents of the church might be envisioned through the image of a new Nero, a figure more relevant to the original readers than to modern ones. But Christians oppressed in all times can take both warning—that such figures exist—and encouragement—that their end is prophesied—from this image, once they understand it.) By examing the original point of the symbols, this commentary provides

readers better access to Revelation's message for applying it today.

Symbolism. As in the Old Testament prophets, much of John's symbolic language is meant as evocative imagery, to elicit particular responses, rather than as a detailed literal picture of events. Readers steeped in the Old Testament and Jewish apocalyptic literature would have understood this method of interpretation; sometimes older symbols could be reapplied to new situations but were meant to evoke the same sort of response. Sometimes John simply explains what the symbols mean (e.g., 1:20); in other cases the first readers would have understood from other clues in his book or because of cultural information or knowledge of how these symbols were used in antiquity, which he and his readers both understood. John plainly expected his readers to understand his points (1:3; 22:10).

Situation Part 1: The Imperial Cult. Only some cities faced persecution, but the threat was wider. The line between human and divine had always been thin in Greek religion, and consequently peoples of the Greek East had built temples to Roman emperors from the first emperor on; the first shrines were in Ephesus and Smyrna. In Rome itself the imperial cult was viewed as a symbol of loyalty to the Roman state, and emperors were deified only after they died. But several emperors—for the most part cursed instead of deified after death—claimed to be gods while still alive (Gaius Caligula, Nero and Domitian). The emperor at the time Revelation was written was most likely the widely hated Domitian, who demanded worship while he was alive. If some considered Christians subversive, cities in the eastern part of the empire could use worshiping the image of the emperor in his temple as a test of loyalty to the state (cf. Rev 13:14; earlier, cf. Dan 3:5).

Domitian repressed the aristocracy, expelled astrologers from Rome (lest they predict his demise) and persecuted philosophers and religions that he perceived as hostile to himself. The sources also show that he repressed Judaism and Christianity, although they were not singled out. Evidence on the imperial cult in Asia and outright persecution of Christians in Asia on the provincial level in the early second century (pre-Trajanic repression continuing in Trajan's time) suggest that Domitian's own claims and behavior stimulated the environment in which provincial persecution of Christians in Asia Minor occurred.

Situation Part 2: Inevitable Conflict. Jewish people were unofficially exempted from emperor worship, but well-off Asian Jews, disliked by Domitian and embarrassed by the relatively recent revolt of Palestinian Jewry (A.D. 66–70), wanted to dissociate themselves from potentially subversive groups. Some Asian *synagogues thus expelled Jewish Christians (2:9; 3:7-9), who could face Roman persecution if their Jewishness were in question. In other cities, possibly the majority, no one targeted Christians for persecution; the temptation there was simply to blend into the larger cultural environment. John's message would comfort some hearers and confront others.

The Romans repressed any groups whose prophets denounced Rome, but John stands well in the Old Testament tradition of uttering oracles against oppressive nations and empires, especially those that oppressed God's people. Some other Jewish writers did pronounce judgment against Rome (often with cryptic names like Babylon, the Kittim or even Edom), and many still wanted to revolt (this revolutionary fervor materialized in Egypt and Cyrene shortly thereafter); but Revelation is among the most explicit oracles of judgment against Rome's rebellion against God. Although Rome may have been the Babylon of John's day, other oppressive empires have followed it. Ancient authors often contrasted characters; Revelation contrasts Babylon, portrayed as a prostitute, with the New Jerusalem, portrayed as a bride. John invites hearers to live not for the empires of this age but for the promised city to come.

Message. Revelation provides an eternal perspective, by emphasizing such themes as the antagonism of the world in rebellion against God toward a church obedient to God's will; the unity of the church's worship with heaven's worship; that victory depends on Christ's finished work, not on human circumstances; that Christians must be ready to face death for Christ's honor; that representatives of every people will ultimately stand before his throne; that the imminent hope of his return is worth more than all this world's goods; and so forth. From the beginning, the Old Testament covenant and promise had implied a hope for the future of God's people. When Israel was confronted with the question of individuals' future, the Old Testament doctrines of justice and hope led them to views like the *resurrection (Is 26:19; Dan 12:2). The future hope is further developed and embroidered with the imagery of Revelation.

Commentaries. For background at an advanced level, see especially David E. Aune, *Revelation,* 3 vols.,WBC 52 (Dallas: Word, 1997); Gregory K. Beale, *The Book of Revelation: A Commentary on the Greek Text* (Grand Rapids: Eerdmans, 1999); Grant R. Osborne, *Revelation,* BECNT (Grand Rapids: Baker, 2002); Mitchell G. Reddish, *Revelation,* SHBC (Macon, GA: Smyth & Helwys, 2001). For useful commentaries on a more mediating level, see G. R. Beasley-Murray, *The Book of Revelation,* 2nd ed., NCB (1978; reprint, Grand Rapids: Eerdmans, 1981); G. B. Caird, *A Commentary on the Revelation of Saint John the Divine,* HNTC (San Francisco: Harper & Row, 1966); Craig S. Keener, *Revelation,* NIVAC (Grand Rapids: Zondervan, 1999); on a more popular level, see, e.g., Bruce M. Metzger, *Breaking the Code: Understanding the Book of Revelation* (Nashville: Abingdon, 1993) and especially Charles H. Talbert, *The Apocalypse: A Reading of the Revelation of John* (Louisville, KY: Westminster John Knox, 1994). Exceptionally useful specialized studies include Richard Bauckham, *The Climax of Prophecy: Studies on the Book of Revelation* (New York: T & T Clark, 1993); J. Nelson Kraybill, *Imperial Cult and Commerce in John's Apocalypse,* JSNTSup 132 (Sheffield, UK: Sheffield Academic Press, 1996); David A. Thomas, *Revelation 19 in Historical and Mythological Context,* Studies in Biblical Literature 118 (New York: Peter Lang, 2008).

1:1-3
Title and Apocalyptic Introduction

Titles of documents often consisted of a statement like "the book of the words of so-and-so" (Tobit 1:1); John's title resembles that of some *Old Testament prophetic books (e.g., Is 1:1; Jer 1:1; Hos 1:1). Titles were normally affixed to the outside of a scroll, although by the mid-second century some people were using the codex, or modern form of book, and titles were put on the inside.

1:1. Most *apocalypses were attributed to meritorious Old Testament characters of the distant past; like Old Testament prophetic books, Revelation is written by a contemporary *apostle who does not need such a pen name; he writes to real congregations that know him (1:4, 11). (Other apocalypses did not name specific recipients or use the epistolary form.)

Some revelations in the Old Testament (Dan 7:16; 10:5-21; cf. Ex 3:2; Judg 6:11-23) and many revelations in apocalyptic literature (e.g., *1 Enoch* and *4 Ezra*) were mediated through angels. Old Testament prophets were called God's "servants," a title John aptly claims for himself at the opening of his book.

1:2. "Witness" was especially a legal term, although its sense had been widely extended beyond that. Christians were being betrayed to Roman law courts, but in the context of Revelation, "witness" is the Christian proclamation of knowledge about Jesus, in a sense providing evidence in the light of the court of God's final judgment (cf. Is 43:8-12; 44:8-9).

1:3. Most people in antiquity could not read, and there would not at any rate be enough copies of the book (which would have to be copied by hand) for everyone to have his or her own. Thus the blessing is for the one who reads aloud to the congregation (just as someone would read in a *synagogue) and those who hear (just as the rest of the congregation listened to Scripture readings). The "blessing" form was common in the Old Testament and Jewish literature (see comment on Mt 5:1-12), and here implies that the hearers were expected to understand and obey what they heard. (Revelation contains seven such "blessings" and seven curses or "woes," probably all oracular, i.e., prophetic.) Apocalypses commonly predicted the imminent end of the age, or imminent events heralding that end (especially in the roughly contemporary work *4 Ezra*).

1:4-8
Epistolary Introduction

Works that were not strictly letters but were being sent to readers could include letter introductions, for example, the historical work 2 Maccabees (1:1–2:32, especially 1:1). One could frame a paragraph or larger work with literary brackets; in this case, "the one who is, who was and who is to come, the Almighty" frames 1:1-4.

1:4. "*Grace and peace" adapts a standard ancient greeting and blessing from a deity (here, from Father, Son and possibly *Spirit); see comment on Romans 1:7. On the encyclical nature of the letter (which could not be quickly recopied by hand many times over, and thus was read by the messenger to each *church in sequence), see comment on Revelation 1:11.

The "one who is, was and is to come" is related to an occasional Greek title for an eternal deity, but especially reflects a Greek exposition of the *Old Testament name "I AM" (Ex 3:14; the *LXX has "he who is"), in the same form in which it was also expanded by a *targum. Some argue that the "seven spirits" here might refer to the seven holy archangels recognized by Judaism around the throne (Rev 8:2; see comment on 5:6). More often commentators argue that they evoke the sevenfold messianic Spirit of Isaiah 11:2. (That the sevenfold Spirit imagery of Is 11:2 was current is suggested by *1 Enoch* 61:11; cf. **Psalms of Solomon* 17:37.) Given Revelation's predilection for the number "seven," this number alone should not be decisive for resolving the seven spirits' identity.

1:5. A "faithful" witness (2:13; 3:14) was a reliable one (Prov 14:5, 25; Is 8:2; Jer 42:5). "Firstborn" and "ruler over the earth's kings" allude to Psalm 89:27. Under Old Testament ritual law, the blood of the sacrifice of the Day of Atonement freed Israel from its sins; the Jewish people had also been freed from Egypt by the blood of the Passover lamb.

1:6. After God redeemed Israel from Egypt he called them "a kingdom of priests" (Ex 19:6), thus indicating that all of them were holy to him. A targum of this verse renders it "a

kingdom and priests," as here (cf. *Jubilees* 16:18).

1:7. Like Matthew 24:30, this verse blends Daniel 7:13 (coming with clouds on the day of the Lord; cf. also, e.g., Ezek 30:3) with Zechariah 12:10 (those who pierced him, i.e., God, will mourn for him). "Tribes of earth" extends the image beyond the tribes of Israel (cf. Zech 12:12) to all peoples; citizens of cities in the Greek East (and even ancient Rome) were divided into tribes.

1:8. Some Greco-Roman writers called the supreme deity the "first," but the Old Testament (Is 41:4) and Judaism (e.g., *Josephus, *Philo, adapting *Stoic language) had already called Israel's God the "first and the last." This is the point of calling him by the first and last letters of the Greek alphabet, Alpha and Omega. (Some later Jewish teachers similarly came to call him the *'Alef* and the *Tav,* the first and last letters of the Hebrew alphabet. They further called God "truth," Hebrew *'emeth,* spelled *'alef-mem-tav,* which they said were the first, middle and last letters of the alphabet, showing that God was eternal and ruled over all time.) Greek-speaking Jews often called God "the omnipotent," or "all-powerful," as here.

1:9-20
The Opening Revelation

1:9. Governors of various provinces could exercise their own discretion as to whether those charged and found guilty should be banished to an island, executed or enslaved. Those of higher social status automatically received lighter sentences than others, but John was banished as opposed to executed (cf. 2:13) either on account of his age (as sometimes happened) or the clemency of the local governor. In general, banishments were of two kinds: *deportatio* (including confiscation of property and removal of civil rights) and *relegatio* (without such penalties); technically only the emperor could declare the former, but a provincial governor could declare the latter, as here.

The most common places of Roman banishment were some rocky Aegean islands called the Cyclades (around Delos) and the Sporades, off the coast of Asia, which included Patmos (forty to fifty miles southwest of Ephesus). Patmos was not deserted; it included a gymnasium and temple of Artemis (the island's patron deity). Because Babylon was the major place of exile in Old Testament tradition (Ezek 1:1), John's own banishment puts him in a position to denounce Rome as the new Babylon (chaps. 17–18; see comment on 14:8).

1:10. Because the Old Testament and ancient Judaism especially associated the Spirit of God with *prophecy, "in the Spirit" here may mean that John was in charismatic worship (1 Chron 25:1-6) or (using closer language) a visionary state (Ezek 2:2; 3:12, 14, 24; 8:3; 11:1, 24). Nevertheless, the revelation here, as in the Old Testament but in contrast to much Jewish *apocalyptic literature, is otherwise unsolicited (see comment on Rev 4:2). Some texts compared powerful voices to trumpets, but the "sound like a trumpet" may allude to God's revelation in Exodus 19:16, when the Lord was preparing to give forth his word.

One day a month was dedicated to the honor of the emperor in Asia Minor, but the Christians dedicated one day—probably each week—to Christ's honor, perhaps in view of the coming "day of the Lord." (According to some Jewish schemes for reckoning history, the seventh and final age of history would be an age of sabbath rest [cf. Rev 20]; some second-century Christian interpreters transferred the image to an eighth age, speaking of the Lord's day as the eighth day of the week. But it may be debated how early and how relevant these ideas are to John in Revelation.) Scholars often argue that "the Lord's day" refers to Sunday, as the weekday of Jesus' *resurrection; the early Jewish Christians may have preferred that day to avoid conflicting with sabbath observance.

1:11. The seven cities mentioned here are seven of the eight most prominent cities of western Asia Minor (what is now western Turkey). The Asiarchs met annually in one of seven cities, almost identical with this list; John simply replaces Cyzicus, far to the north of the other cities, with Thyatira, which was more centrally located (and perhaps had a larger church). Word often spread from major cities (cf. Acts 19:10), so messages to the churches in these seven cities would affect the churches of the entire province. A messenger delivering John's book would arrive first in

Ephesus; the other cities are arranged in the sequence a messenger would follow on foot to reach them. The distance between them generally varies from about thirty to forty-five miles. (Those who suggest that John meant the churches symbolically for different stages of church history have to assume that churches before the final stage could not hope for Christ's imminent return; but John's letters to the churches display too much local color to represent merely church ages, and their precise geographical arrangement suggests that he means them literally.)

1:12. On the lampstands, see comment on 1:20.

1:13-15. This scene evokes earlier biblical revelations. Its imagery resembles the picture of God in Daniel 7:9 (the white hair symbolizing the dignity accruing to age), features of the mighty angel in Daniel 10:5-6 and the title "one like a son of man" from Daniel 7:13 (where he would come to rule the nations). The sound of the angel's voice "like a tumult" in Daniel 10:6 is adapted by means of the divine imagery of Ezekiel 1:24; 43:2; extrabiblical Jewish traditions also spoke of waters in the heavens. The "robe" and "girdle" might allude to Jesus' role as *high priest (Ex 28:4). Others could also wear robes and girdles, however; some note that workmen wore their girdles around their waist while working, so a position around the breast would signify that his work is complete. Given the other biblical allusions here, however, an allusion to the Old Testament high priest seems probable. "Feet of bronze" could allude to the bearers of God's throne (Ezek 1:7) as well as to the angel of Daniel 10:6.

The cumulative impact of these images is to present the risen Jesus as the greatest conceivable figure, using biblical imagery. Apocalypses employed some of this imagery (angels that looked like lightning, etc.), although John at this point avoids postbiblical elaborations that became common in such works (angels thousands of miles tall, etc.).

1:16. The mouth of God's spokesperson could be presented as a weapon (Is 49:2) and the *Messiah's just decrees of judgment would be the weapon of his mouth (Is 11:4). Some Jewish texts described angels shining as the sun (cf. also the angel's face like lightning in Dan 10:6).

1:17. Terror was common during visions (Gen 15:12); those who received revelations of God (Ezek 1:28; 11:13) or of angels (Dan 8:18; 10:9, 15) in the Old Testament often fell on their faces, unless the revealer touched and strengthened them (Dan 8:18; 10:10). (The image was continued in many later Jewish texts—e.g., Tobit, **1 Enoch* and **4 Ezra*—as well.) God often had to assure his servants not to be afraid (e.g., Deut 3:2; Josh 8:1; Jer 1:8), sometimes when he spoke to them (e.g., Gen 26:24). For "first and last," see comment on 1:8.

1:18. In the Old Testament (Ps 9:13; 107:18) and Jewish literature, "the gates of Hades" referred to the realm of the dead and thus to the power of death; one who held the keys to these realms thus ruled over them. (Whoever held the keys in a royal house held a position of great authority in that house, as in Is 22:21-22; keys symbolized authority to control whatever they opened, and Jewish texts spoke of God dispensing keys to rain, etc.) *Gentiles spoke of netherworld deities, such as Hades or Anubis, holding the keys of death. Jewish literature said that God had authority over death and the gates of Hades (Wisdom of Solomon 16:13), a role here held by Jesus. Christ's power over death, as the one who had risen, would encourage his followers now facing possible death.

1:19. Prophecy in the Old Testament involved speaking God's message and was not strictly limited to prediction of the future. But the Greek writer *Plutarch defined prophecy as predicting the future that is caused by the present and past; the Jewish Sibyl was said to prophesy the things that were before, were present and would come about (**Sibylline Oracles* 1:3-4). Jewish apocalyptic writers often divided history into ages as a prelude to their prophecies about the future (though often writing under a pseudonym, ostensibly before the history occurred).

1:20. Jewish texts often portrayed angels as stars (see comment on 12:4). Cosmic imagery was frequent; e.g., *Josephus and *Philo identified the "seven planets" with certain symbols in the temple, and Palestinian synagogues later sported zodiacs around Helios, the sun god, on their floors (despite Old Testament prohibitions). Pagans believed that Fate controlled the nations through the stars (which were often

deified)—an Eastern view introduced into Greco-Roman paganism under the guise of the science of the day. By this period many Jewish people concurred that the nations were ruled by the stars, which they took as angels under God's dominion. But if John uses this symbolism—and this is unclear—his point would be that *Christ is Lord over the universe, including Lord over the angels who guide the churches as well as the nations.

A (usually) seven-branched lampstand, or menorah, was one of the most common symbols for Judaism and synagogues in antiquity; by identifying the churches as lampstands, John claims that the Jesus movement is the true form of Judaism, no matter what some hostile synagogue officials were claiming (2:9; 3:9). Because Revelation portrays heaven as a sanctuary (cf., e.g., comment on 4:6-8; 5:8-10; 7:9-12; 8:3), the lampstands may also allude to the spiritual representation of the churches in heaven (Ex 25:31-40).

There are three major views on the "angels" of the churches, of which only the third makes strong sense in the context of Revelation. One is that they are "messengers" bearing the scroll to the churches; although this meaning is not impossible (1 Maccabees 1:44), it is unlikely that John would have seven separate copies of the book or would send seven different messengers (see comment on Rev 1:11). A second view is that they are public readers in each congregation, like a corresponding kind of "messenger" in the synagogues. According to second-century teaching, if such a reader slipped in his reading of the biblical text, the whole congregation was held accountable before God because he acted as their agent. The first and second views falter in that Revelation nowhere else employs "angel" in this manner; as elsewhere in apocalyptic literature, Revelation uses the term for what we call "angels." Thus, third, they may be the guardian angels of each congregation, analogous to the Jewish view (rooted in Daniel) that not only each person but each nation was assigned a guardian angel, and the angels of the evil nations would be judged together with the nations they led astray. Some who hold this view also suggest that they may represent heavenly counterparts to earthly realities (the churches), symbolizing the heavenly significance of the churches as the lampstands did; this view would also fit apocalyptic imagery.

2:1-7
Oracle to the Ephesian Church

Some "prophetic letters" also appeared in the *Old Testament (2 Chron 21:12-15; Jer 29) and other Jewish literature. Each of the oracle letters in Revelation follows the same form, which some have compared to imperial letter edicts posted as inscriptions in the cities of Asia Minor. Other scholars have compared the elements of the form to Old Testament and ancient Near Eastern covenant formulas; if they are correct, the prophecies here may act like the covenant lawsuits common in the Old Testament prophets (e.g., in Amos 2–4). They may also function analogously to series of oracles against the nations common in the Old Testament prophets (e.g., Is 13–23; Jer 46–51; Ezek 25–32; especially the eight brief oracles of Amos 1–2). Compare especially throughout the **Sibylline Oracles* for later examples of oracles against nations, including oracles against some of the cities Revelation lists, such as Smyrna, Pergamum, Sardis, Laodicea and Ephesus. (Some other ancient Near Eastern prophets also included judgment prophecies against other nations, but these were military oracles in the service of nationalism; unlike the Old Testament prophets, they did not condemn their own peoples. The exceptions are Egyptian moralist oracles after the fact, and Mari prophets' rebukes of kings for not supporting the temple better. There is no parallel outside Israel to an intergenerational succession of prophets calling their own people to *repentance for moral sins.)

William Ramsay long ago pointed to some local color in each of these oracles. Although some of his connections may be strained, others appear appropriate. Ancient cities were fiercely proud of their own history and culture and would be more sensitive to local allusions than most readers today would be. Although the *churches in some cities seem to have faced persecution, in other cities the churches faced greater temptations to compromise with a relativistic paganism.

Ephesus had been one of the first Asian centers of the imperial cult, and it was also the most prominent; Domitian had allowed

Ephesus the title of guardian of his temple. On the city's notoriety in *magic and the worship of Artemis, see comment on Acts 19. Inscriptions attest that Ephesus also had a sizable Jewish population, of which Christians had originally been a comfortable part (Acts 18:19-20, 26; 19:8-9). In practice, Ephesus was the leading center of Asia Minor in this period. It was also the first of the seven cities that a messenger voyaging from Patmos (forty to fifty miles to the southwest) would reach.

2:1. "Says this" (NASB) echoes the Old Testament formula that prophets of God borrowed from royal edicts and typical messenger formulas: "Thus says the lord/king." For the description of Jesus here, see comment on Revelation 1:13-16.

2:2-3. *Rhetorical experts (teachers of professional public speaking) recommended that speakers mix praise and blame for their hearers, to avoid closing them to the message while also avoiding populist flattery. Rhetoricians normally began with praise, as do most of the letters in Revelation 2–3. Edicts sometimes included "I know," although the allusion here is to the omniscience of the one who inspires *prophecy, a standard ancient idea.

2:4. Sound doctrine and perseverance are inadequate without love. Interpreters debate whether the text means love for other Christians (as in 1 Jn; cf. "works"—Rev 2:5, 19; "hate"—2:6) or for God (Jer 2:2) or for both.

2:5. Royal emissaries could threaten judgment on cities, but this threat is closer to God's warnings to the unrepentant in the Old Testament. Ramsay noted that eventually only a village remained of what was once mighty Ephesus, several miles from the original site of the city; due to silt deposits, it was already beginning to lose its geographical position as a coastal city in John's day. Still, these oracles address the churches rather than the cities they represented before God.

2:6. This teaching may be related to that of "Balaam" (2:14-15); this sect may have advocated compromise with the imperial cult to avoid persecution. Later church fathers identified them as an immoral *Gnostic sect, but they may have been speculating. As in the *Dead Sea Scrolls, the "hatred" here is hatred of sin, not private revenge (the Scrolls taught that vengeance should be left to God).

2:7. "The *Spirit" in Judaism was especially associated with prophetic enablement; thus the Spirit inspires John's vision and prophecy (1:10; 14:13). On having an "ear," see comment on Mark 4:9; the wording here might echo Jesus' earlier teaching. Some moralists also exhorted hearers to "hear" sages of old they were citing, but the formula here resembles the common Old Testament formula "Hear the word of the Lord" (e.g., Amos 3:1; 4:1; 5:1). "Overcoming" (especially a military or athletic image of conquest or victory) here involves persevering in the face of conflict and hardship. Although the "tree of life" was used to symbolize the *law in later Jewish teaching, this vision alludes to Genesis 2:9 and a restoration of paradise (on which cf. 2 Cor 12:2-4). Each of the promises in these oracles to the churches is fulfilled in Revelation 21–22.

2:8-11
Oracle to the Church at Smyrna

Only Smyrna and Philadelphia (the two most persecuted churches) are fully praised; Ramsay notes that of the seven these two cities held out longest before the Turkish conquest. Ephesus and prosperous Smyrna were the two oldest centers of the imperial cult in Asia. One of the oldest and most prominent cities in Asia, Smyrna sought but failed to achieve honor equal to that of Ephesus in this period. It was also known for its beauty. On the situation in Smyrna and Philadelphia, which apparently includes expulsion from the *synagogues, see the introduction to John. John's Gospel probably addresses this or a related sort of situation.

2:8. On the description of Jesus here, see comment on 1:17-18. Some commentators have argued that Smyrna was likewise dead and living, because it enjoyed only a shadow of its former reputation. This interpretation is unlikely in view of its prosperity, even if it had been overshadowed by Ephesus. According to Strabo, Smyrna had been razed by the Lydians and rebuilt with great beauty many centuries before, but this revival of a city was not commonly understood as death and *resurrection, and the occasion was now so remote in the past that the Smyrneans themselves would probably not have caught such a purported allusion. Furthermore, Sardis was once burned as well,

but 3:1 says the opposite about it. What is most relevant is that Jesus also promised them life for death (2:10) modeled after his own (1:18).

2:9. The strength of the Jewish community in Smyrna is well attested. In denying that his opponents are spiritually Jewish, he seems to return the charge they had made against the Christians; in calling them a "synagogue of *Satan," his rhetoric resembles that of the *Dead Sea Scrolls, where a persecuted Jewish sect that considered the rest of Judaism apostate called its opponents "the lot of Belial" (Satan; cf. 1QHa 10.24). We should remember that this language reflects an intra-Jewish polemic, as in the Dead Sea Scrolls, and was applied only to a particularly hostile local situation in Smyrna and Philadelphia; it does not offer a model for normal dialogue.

People were betrayed to provincial officials by *delatores,* "informers," and by the early second century it is attested that Christians in Asia Minor were usually charged only when accused by such informers. By the early second century, some Jews in Smyrna were reportedly fulfilling this function against Christians (such as Polycarp). But some believe that simply claiming publicly that Christians were no longer welcome as part of the synagogue community could constitute a form of betrayal; Christians who were not seen as Jewish had no protection against expectations for participation in the emperor cult. On a local level, some could use Christians' nonparticipation to question their civic loyalty.

2:10. Prison was merely a place of detention until trial or execution and could therefore be a prelude to execution. "Testing" for "ten days" could be a symbolic allusion to the minor test of Daniel 1:12, which preceded the major trials faced by Daniel and his three companions. "Behold" is common in prophetic literature and occurs repeatedly in Ezekiel (e.g., 1:4, 15).

Many Christians were martyred in Smyrna over the next several centuries. Jewish martyr stories praised those who were faithful to death and thus would be resurrected at the end; "crowns" were victors' (2:11) rewards for athletes or military heroes. (A number of ancient writers and inscriptions also mentioned the "crown of Smyrna," possibly referring to the city's beauty.)

2:11. Other Jewish literature also refers to the "second death," although often meaning annihilation (Revelation uses it of eternal torment—20:10, 14). The text of *4 Maccabees portrays Jewish martyrs as fighting and triumphing by death and thus crowned as victorious athletes by godliness.

2:12-17
Oracle to the Church in Pergamum

There is some evidence for a Jewish community at Pergamum, but it was a strongly pagan city (see comment on 2:13). It was also a famous and prosperous city, and its rulers had been the first to invite the Romans into the affairs of Asia Minor. It was the center of the imperial cult for its province.

2:12. The "sword" in the *Old Testament and *apocalyptic literature often symbolized judgment or war; cf. 1:16, 2:16 and 19:13. Romans thought of the "sword" as the power to execute capital punishment (as in Rom 13:4).

2:13. Pergamum was traditionally known for its worship of Asclepius (whose symbol on Pergamum's coins was the serpent; cf. 12:9) and worshiped other traditional Greek deities, such as Demeter, Athena and Dionysus. Its famous giant altar of Zeus (120 by 112 feet) overlooked the city on its citadel, and some have suggested that this is the background for "Satan's throne" in this verse. Perhaps a more likely allusion for "Satan's throne" is the local worship of the emperor, celebrated on Pergamum's coinage in this period. Local rulers had been worshiped before the Roman period, and Pergamum was one of the first cities of Asia to build a temple to a Roman emperor (a temple to Augustus, also conspicuous on the citadel). A further imperial temple was dedicated there within a decade or two after John wrote Revelation.

All citizens were expected to participate in civic religion; most citizens wanted to participate in imperial festivals and eat the meat of sacrificed animals doled out at many pagan festivals. Once one Christian was legally martyred, the legal precedent was set for the execution of Christians in other provinces.

2:14-15. The false teachers advocate compromise with pagan cults, perhaps including the imperial cult, for humanly appealing reasons (2:13). "Balaam" was the most famous

pagan prophet of the Old Testament and Jewish tradition (see comment on Jude 11) and is thus provided as the pseudonym for the heretical leader of the compromisers, like "Jezebel" in Thyatira (2:20).

Balaam, a prominent ancient figure also attested outside the Bible, led Israel to eat meat offered to idols and to have sexual intercourse with pagans to whom they were not married (Num 25:1-3; 31:16). Other nations could not destroy Israel, but Balaam knew that if he could subvert their morals, God would withdraw his blessing and judge them (see *Josephus and *Pseudo-Philo; cf. Num 25:8). God judged Israel, but Balaam, who acted from mercenary motives, also lost his life (Num 31:8, 16; Josh 13:22). "Sexual immorality" may be meant literally here (it was common in paganism) or may refer, as often in the Old Testament prophets, to spiritual infidelity against God (perhaps including emperor worship; cf. 17:5).

2:16. Although there would be one ultimate end of the world, the Old Testament prophets and Jewish literature occasionally described judgments in history in the language of the final day of the Lord.

2:17. The original ark of the covenant was permanently lost in 586 B.C. (cf. Jer 3:16), and the manna inside it had vanished before then. But a wide spectrum of Jewish tradition declared that Jeremiah (e.g., 2 Maccabees, *4 Baruch*) or an angel (**2 Baruch*) had hidden them and that they would be restored at the end time (a similar view took root among the *Samaritans, who dated the departure earlier). On the symbol of spiritual manna, see comment on John 6:35-40. Scholars propose various possible backgrounds of the white stone. Among the guesses: pebbles of various colors were used for admission to public celebrations; a black stone was the sacred symbol of the infamous Asian goddess Cybele; white stones used for medical purposes were associated with Judea; and perhaps somewhat more significantly, jurors used black stones to vote for a person's guilt but white ones to vote for innocence. Though Pergamum usually used dark brown granite for building materials, they preferred white marble for inscriptions. For a new name, see Isaiah 6:2; for name change and promise, cf. Genesis 17:5, 15.

2:18-29
Oracle to the Church in Thyatira

Thyatira's economy seems to have emphasized trades and crafts. The trade guilds each had common meals (normally about once a month) dedicated to their patron deities. Although Thyatira had a Jewish community, it does not appear to have been influential; Christians who refused to participate in the life of the guilds might thus find themselves isolated socially and economically (cf. 13:17). Thyatira was only beginning to achieve prosperity in this period, hence its citizens probably valued wealth highly.

2:18. Thyatira hosted a major cult of Apollo, son of Zeus and the deity associated with *prophecy and the sun. Some scholars note that the emperor was linked with Apollo and suggest that he may have been worshiped in Thyatira as his earthly manifestation. Although bronze-working was not unique to Thyatira, some scholars have also pointed to the bronze-workers' guild in that city.

2:19-20. The biblical "Jezebel" was not a prophetess, but the name is used here for its related connotations. Jezebel had nine hundred prophets (1 Kings 18:19) and led God's people into idolatry (see comment on Rev 2:14). She was accused of prostitution, a damaging charge against a king's wife (the term was probably meant spiritually, as one who led Israel from their commitment to God), and of witchcraft, no doubt for her occult involvement in pagan cults (2 Kings 9:22). As a prostitute she becomes the prototype of the evil empire of chapters 17–18. Immorality and food offered to idols were common temptations of paganism (see Num 25:1-2; 1 Cor 10:7-8).

Some scholars have suggested that Thyatira was one of the Asian cities with an oracle of the Sibyl; this cult purported to involve female prophetesses in the Greek style, and its literary forms had come to be used by *Diaspora Judaism and eventually later Christians. Because false prophets were not limited to such settings we cannot really be certain whether this proposal provides background for "Jezebel."

2:21-23. Some Jewish writers thought of judgment against children produced by illicit

unions, but the children are meant figuratively here (cf. Is 57:3-4, 7-8); *disciples were sometimes called "children." Jewish texts regularly portray God's omniscience and sometimes call him "searcher of hearts and minds" (based on *Old Testament descriptions of him; e.g., 1 Chron 28:9); here this characteristic of God applies to Jesus. God gave false prophets opportunity to turn from their falsehood and hear the true word of the Lord (Jer 23:22-23). Judgment according to one's works fits biblical expectations (see, e.g., Ps 62:12; Jer 17:10; Prov 24:12; Sirach 16:12, 14).

2:24. *Mystery cults stressed deep secrets shared only among the initiates; Jewish people also spoke of "deep things" about God (e.g., Job 11:7; passages in **1 Enoch; *2 Baruch*). For "no other burden" (NASB), cf. perhaps comment on Acts 15:28-29.

2:25-27. Revelation cites here an enthronement psalm that celebrated the promise to David and pointed to his seed who would reign over the nations that sought to rebel against him (Ps 2:8-9). The *Messiah, to whom the psalm applied par excellence (and to whom it was often understood to apply), here makes his people partakers of his rule over the nations. Most people in the Roman empire considered the emperor the supreme ruler; Revelation declares that Jesus is greater than the most powerful emperor the world had ever known.

2:28-29. The morning star, Venus, heralded the dawn, and great people could be compared to it as well as to the sun shining in glory (Sirach 50:6); cf. Revelation 22:16. Because most of the Greco-Roman world believed that life was ruled by the stars, to be given authority over one of the most powerful of stars (a symbol of sovereignty among the Romans) was to share Christ's rule over creation (2:26-27).

3:1-6
Oracle Against the Church of Sardis

For what it is worth, William Ramsay pointed out that the two *churches condemned most harshly belong to the only two cities of the seven that are completely uninhabited in modern times, Sardis and Laodicea. Sardis hosted many pagan cults; typical Greek deities such as Artemis, Cybele, Demeter and Kore (Persephone) were all worshiped there. Some scholars note that the Greek goddess Demeter, absorbing the character of the old Asiatic goddess Cybele, had also been locally identified with the deified mother of an emperor. But mixing of deities was common in antiquity, and paganism permeated all the non-Jewish cities of the Roman Empire. Despite the city's paganism, the Christian community there seems to have experienced no persecution—and no spiritual life. Sardis had a large, powerful and wealthy Jewish community that had long been a respected part of civic life; their *synagogue was roughly the length of a football field, with some of the city's best real estate. Like the Jewish community, the church was probably tolerated.

3:1-2. On the "spirits" and "stars," cf. 1:4, 16, 20. The past glories of Sardis as chief city of Lydia under Croesus were proverbial; its present prosperity could never regain for it the position it had once held; most importantly, however, the "alive . . . dead" here reverses the imagery of 1:18 and 2:8.

3:3. Sardis's acropolis had never been taken by battle, but twice in its history invaders had captured it by stealth unexpectedly in the night. More importantly, this verse refers to Jesus' saying preserved in Matthew 24:43 (as do 1 Thess 5:2; 2 Pet 3:10).

3:4. Inscriptions in Asia Minor indicate that many temples barred worshipers with soiled garments, whose entry would insult the deity. White robes were worn by priests (and many other worshipers) in the Jerusalem temple, worshipers of most deities (e.g., Isis, Apollo, Artemis), celebrants in cult festivals for the emperor and so on.

3:5-6. All Greek and Roman cities had official rolls of citizens, to which new citizens could be added; in at least some cities, expelled citizens would be removed. (Sardis, with its ancient history of record-keeping, would be familiar with this practice.) The biblically literate, however, would catch an allusion to Exodus 32:32-33. The "book of life" appears in the *Old Testament and figures prominently in Jewish *apocalyptic; see comment on Philippians 4:3. Confessing the believer's name before God's judgment tribunal probably evokes an earlier saying of Jesus; see Matthew 10:32 and Luke 12:8.

3:7-13
Oracle to the Church in Philadelphia

Philadelphia worshiped typical Greek deities; it is known, for example, to have housed temples of Artemis, Helios, Zeus, Dionysus and Aphrodite. A third-century inscription from the Jewish synagogue there has been recovered. Believers in Philadelphia, like the church in Smyrna, had apparently been expelled from the Jewish community; the background resembles that for the Fourth Gospel (see introduction to John).

3:7-8. These verses clearly allude to Isaiah 22:22, which speaks of one who had David's key to open and shut, indicating full authorization to rule the house. To Jewish Christians excluded from the synagogue, this was Jesus' encouragement that he who rightly ruled the house of David now acknowledged them as his own people.

3:9. See comment on 2:9-10. Exclusion from the synagogue could lead to more direct persecution by the Roman authorities, as in Smyrna. Jesus' claim that their opponents would know that he had loved them might echo Malachi 1:2, where God tells Israel that he loved them—but despised Esau/Edom; cf. Proverbs 14:19. Jewish people expected the kings of the nations to bow before them in the end time (Is 49:23; 60:11, 14; **1 Enoch;* *Dead Sea Scrolls; cf. Ps 72:10-11).

3:10. *Apocalypses sometimes prophesied special deliverance (i.e., protection) for the righteous in the coming times of hardship; the *Old Testament also promised God's faithfulness to his people in such times (see comment on 7:3). Some texts (e.g., the Dead Sea Scrolls) spoke of the righteous being tested by the future time of suffering, although the motif of the righteous being tested in sufferings in general was a common one (see comment on 1 Pet 1:7). ("Keep from" could mean "protect from" [cf. Rev 7:3; cf. Jn 17:15, the only other *New Testament use of the construction] or "preserve from.") Revelation probably contrasts the wicked "earth dwellers" with the righteous "heaven dwellers"; apocalypses (like **4 Ezra, *Similitudes of Enoch* and **2 Baruch*) also announce judgments on the "inhabitants of the earth."

3:11. "Crown" here alludes to the wreath that victors received at the end of a race or sometimes for military exploits.

3:12-13. God's remnant people appear as a new temple in the Dead Sea Scrolls and in various other New Testament texts. Pillars could be used to symbolize the people of God (Ex 24:4; see also comment on Gal 2:9) but were a natural feature of temples and often bore dedicatory inscriptions (also on the pillars of the Capernaum synagogue, just as military standards and other items bore inscriptions). Israel's own temple had pillars (Ex 27:10-17; 38:10-28; 1 Kings 7:2-6, 15-22) and this would be the case also in the end time (Ezek 40:9–41:3; *1 Enoch* 90:29). The primary allusion is probably to Isaiah 56:5, where those whom the Jewish community rejected (cf. Rev 3:8-9) received a place within God's house and a new name. On the new Jerusalem, see 21:2; "coming down" was natural in the vertical dualism common in apocalyptic literature and the Fourth Gospel, which typically contrasts heaven (where God rules unchallenged) and earth (where many disobey him until the day of judgment). Revelation portrays God's throne room in heaven as a temple (see, e.g., comment on 4:6-8).

3:14-22
Oracle to the Church in Laodicea

Laodicea became important only in Roman times. It was capital of the Cibryatic convention, which included at least twenty-five towns. It was also the wealthiest Phrygian city, and especially prosperous in this period. It was ten miles west of Colosse and six miles south of Hierapolis. Zeus was the city's patron deity, but Laodiceans also had temples for Apollo, Asclepius (the healing deity), Hades, Hera, Athena, Serapis, Dionysus and other deities; that is, it was a fairly typical Greek city religiously. Many Jewish people lived in Phrygia.

3:14. "Beginning" is a divine title; see comment on 1:8 and 22:13. (It may also be relevant that the Roman emperor's primary title was *princeps,* "the first," i.e., among Roman citizens.) Jesus is also the "Amen," the affirmation of God's truth; cf. 2 Corinthians 1:20.

3:15-16. Cold water (and sometimes spiced hot water) was preferred for drinking, and hot water for bathing, but Laodicea lacked a

natural water supply. Water piped in from hot springs six miles to the south, like any cold water that could have been procured from the mountains, would be lukewarm by the time it reached Laodicea. Although water could be heated, the natural lukewarmness of local water (in contrast with the hot water available at nearby Hierapolis) was undoubtedly a standard complaint of local residents, most of whom had an otherwise comfortable lifestyle. (Their imported water was also full of sediment, though better, said the geographer Strabo, than the water of Hierapolis.) Jesus says: "Were you hot [i.e., for bathing] or cold [i.e., for drinking], you would be useful; but as it is, I feel toward you the way you feel toward your water supply—you make me sick."

3:17-18. Laodicea was a prosperous banking center; proud of its wealth, it refused Roman disaster relief after the earthquake of A.D. 60, rebuilding from its own resources. It was also known for its textiles (especially wool) and for its medical school and production of ear medicine and probably the highly reputed Phrygian eye salve. Everything in which Laodicea could have confidence outwardly, its church, which reflected its culture, lacked spiritually.

Although Greeks did not share Palestinian Jews' moral abhorrence of nudity, everyone except *Cynic sages agreed that the lack of clothing described here, that of poverty (here spiritual), was undesirable. Phrygian "eye salve" (KJV, NASB) was apparently not an ointment per se but was probably powdered and smeared on to the eyelids (contrast Tobit 6:8). On white garments, cf. Revelation 3:4; here it may be a stark contrast with Laodicea's famous "black wool."

3:19. Compare the many prophetic rebukes of Israel in the *Old Testament.

3:20. Compare John 10:1-4; Matthew 24:33. Table fellowship was a sign of intimacy and committed the guest and host to friendly relations. Jesus here invites the Laodicean Christians to dine (cf. Rev 2:7; contrast 2:14, 20) in the present at the messianic banquet (see comment on 19:9); it is an invitation to a genuinely lavish banquet, implying again their spiritual poverty (cf. 3:17-18). But the door to fellowship is presently closed—from their side (contrast 3:7-8).

3:21-22. The image here is one of sharing God's rule; Jesus shares as coregent or viceroy, whereas his people share because they are exalted to rule over the earth (as in Old Testament and Jewish expectations for Israel's exaltation). As the locus of God's glorious presence, his preexistent and glorious throne was the subject of much speculation among Jewish *apocalyptic writers and mystics; see comment on 4:2.

4:1-11
John's Throne Vision

Many scholars believe that Jewish mystics (many of whom penned *apocalypses, like **1 Enoch*) strove for visions of the invisible God, and modeled their views of what they would find on visions of God's enthroned glory in Isaiah 6 and Ezekiel 1 (cf. also Ex 24:9-11; 1 Kings 22:19; Dan 7:9-10). In time these visions were embroidered with every fantastic magnification of the divine glory the mystics could imagine. In contrast to such elaborate reports of the preexistent throne of God, John's description is simple, like the *Old Testament accounts: just enough description to convey the point of God's majesty. Some also argue that his picture of the throne room, including the activity of those surrounding the throne, may be a parody of the imperial court and the worship in the imperial temples—a daring revelation for a banished Jewish prophet like John.

4:1. "After these things" functions as a transition device to the next vision that John would see (7:9; 15:5; 18:1; cf. 7:1; 19:1; 20:3; Jn 5:1; 6:1; 7:1); it was commonly used as such a transition. "I looked, and behold," is typical visionary language (e.g., Ezek 10:1; 44:4; Dan 10:5; also *1 Enoch, *4 Ezra* and other writings based on this *genre). On the trumpet, cf. Revelation 1:10. Although elsewhere in Revelation John is told, "Come here" (17:1; 21:9; cf. Jn 1:39), in this instance "Come up here" may also allude to God's call to Moses to come up the mountain (in later Jewish tradition, to heaven) to receive revelation (Ex 19:24; 24:12; 34:2); the same language appears frequently in apocalypses. The opened heavens are a figure for revelation as well (Rev 11:19; 19:11; Jn 1:51), again following an important Old Testament pattern for such visions (Ezek 1:1), and also developed in other Jewish apocalypses (including the door, e.g., *1 Enoch*).

4:2. "In the Spirit" means that John is prophetically inspired in his vision (see comment on 1:10); Ezekiel had similarly been carried elsewhere in visions (Ezek 11:1, 24). Some Jewish mystics stressed the mortal dangers of the ascent to see God's throne; in some sources they had to know special passwords, and many did not know enough to survive their purported ascent through the spirit realms (see especially *3 *Enoch* and the *rabbis). But some apocalypses allow that angels could immediately lift one into the heavens (*2 *Baruch,*Similitudes of Enoch, 2 Enoch, Testament of Abraham*). Like Ezekiel, John is simply caught up immediately by God's *Spirit.

4:3. For this description of the throne, see Ezekiel 1:26, 28 and 10:1. (Thrones indicated the ruler's dignity and were generally approached by several steps; their bases could portray peoples subdued by the ruler.) This simple description may contrast with the Roman emperor's pomp. It also contrasts with other elaborations of heavenly palaces (*1 Enoch* 14), the magnitude of majesty (e.g., the later rabbis' crowning angel is a five-hundred-year journey tall), or a tour of earth, heaven and hell (especially in later works); John does not even elaborate by weaving together other available Old Testament throne imagery (cf., e.g., Dan 7 in *1 Enoch* 14).

4:4. "Elders" were those with authority in Old Testament cities and later Jewish communities who could function as representatives for their communities (e.g., Deut 21:6); see Isaiah 24:23. In the art of Asia Minor, a few priests could be used to represent thousands of worshipers. The number "twenty-four" has been related to the twenty-four books Jewish writers assigned to the Hebrew *canon, but more relevantly to the twelve tribes plus the twelve *apostles (cf. Rev 21:12-14), or the twenty-four orders of priests. The orders of priests were fixed in the Old Testament (1 Chron 24–25), continued in the *New Testament period and were still commented on by later *rabbis and in later inscriptions. The faithful dead are thus portrayed as priests offering worship to God (Rev 1:6). (Jewish apocalyptic literature often overlapped images of the future age with the present heaven for the righteous dead.)

Greek accounts sometimes portrayed deities as appearing in white (e.g., Demeter and Kore); at least some ancient thinkers, like Pythagoras and some rabbis, associated white with good and black with evil. This contrast no doubt arose in ancient thought through the contrast between day and night, the latter being more associated with witchcraft and (in Jewish thought) *demons. (Contrary to some modern criticisms, it does not relate to complexion; the same contrast between white and black even appears in some traditional African religions.)

Romans and often Jews buried the dead in white. In Jewish tradition, angels were nearly always garbed in gleaming white. More significant here may be the widespread tradition of worshipers dressing in white (3:4). Jewish teachers portrayed Israel as crowned at the revelation at Sinai; the righteous were sometimes viewed as crowned in heaven. (The *Ascension of Isaiah* has the righteous crowned, robed and enthroned in heaven, but it may well be a Christian work; the *Odes of Solomon*, which has a catching up to heaven by the Spirit—cf. 4:2—is a Christian work. But it is not always easy to distinguish early Christian works from Jewish works revised with Christian interpolations.) But the crowns here are probably victors' crowns for those who persevered to death (see comment on 2:10; 3:11). (Many Jewish traditions speak of a heavenly assembly—in the rabbis, a legislative or judicial body—composed of angels or deceased scholars; the antecedents of the image probably go back to the angelic court of God in the Old Testament and the Canaanite images of El's pantheon of seventy gods, replaced by the angels of the seventy nations in Jewish tradition.)

The arrangement is undoubtedly significant. Greek choruses would often sing or dance in circles; amphitheaters surrounded stages; and the Jewish Sanhedrin sat in a semicircle with the *high priest in the middle.

4:5. The special effects rehearse the glory of God's self-revelation at Sinai (Ex 19:16; cf. Ezek 1:4, 13). Some apocalyptic texts report the sources of lightnings and thunderings in particular levels of heaven.

4:6-7. The "sea of glass" (15:2) alludes to the sea in Solomon's temple (1 Kings 7:23; 2 Chron 4:2, 6). It had always been natural to speak

figuratively of God's heavenly temple (e.g., Ps 11:4), given the ancient Near Eastern tradition of the earthly temple reflecting the heavenly one. John's emphasis on worship leads to a portrayal of God's throne room in especially temple terms:

- A sea, as just noted (4:6; 15:2)
- the tabernacle of testimony (15:5)
- an altar of incense (5:8)
- an altar of sacrifice (6:9)
- the ark (11:19; cf. 15:5-8), which functioned as God's throne in the Old Testament
- harps for worship (14:2; 15:2), as in the Old Testament temple, and so forth.

(Even the future New Jerusalem appears as a temple; see comment on Rev 21:16.) Heaven is a place of worship, perhaps implying in part that genuine worship on earth offers a foretaste of heaven. The crystal firmament derives from Ezekiel 1:22. The cherubim were covered with eyes in Ezekiel 10:12; the four creatures had four faces in Ezekiel 1:10 (where, however, each creature had all the features). Ezekiel's imagery may be intentionally figurative (cf. 1 Chron 12:8) but may draw on Babylonian throne and temple imagery and indicate a God greater than any pagans could have conceived; cf. also 1 Kings 7:29.

4:8. Ezekiel also spoke of the six wings (Ezek 1:11). The trisagion ("Holy, holy, holy") is from Isaiah 6:3, where seraphim—fiery, holy angels modeled after the cherubim of the tabernacle—surround God's throne in the Jerusalem temple, symbolizing his universal glory (Is 6:3) and demonstrating the impurity of sinful mortals like the prophet (Is 6:5). Later Jewish texts also employ the biblical imagery of these creatures and this song, which came into use in *synagogue and later *church liturgy as well. One may contrast for example the permanently appointed imperial cult choir at Pergamum, where thirty-six members were to sing hymns in honor of the deified Augustus. Such a choir was impressive by standards of the Roman Empire, but paled before the worship of the true God.

4:9-10. Prostration on one's face was a form of homage offered to gods and rulers in antiquity.

4:11. The emperor Domitian demanded worship as "our Lord and God" but never claimed the role of Creator. Jesus receives the same words of honor in John 20:28.

5:1-7
The Passover Lamb and the Scroll

5:1. Legal documents were sealed, often with roughly six seals imprinted with the attestations of the same number of witnesses. (The wax seals would have to be broken to loose the strings beneath them, which wrapped the scroll and guaranteed that it had not been opened and thus altered.) This form was used for contract deeds and wills; it became increasingly common in Roman documents of the period, and some Palestinian Jewish documents of this sort have been recovered. Scrolls were normally written on only one side of a papyrus sheet, reserving the outside for the title or address; but this scroll is unusually full and thus written on both sides (cf. Ezek 2:9-10). The writing side was called the *recto,* where the fibers were horizontal and easier for writing; the *verso* was used only when the *recto* had inadequate space. Documents written on both sides are rare enough to have a technical name, an opisthograph.

5:2-3. Cf. perhaps Isaiah 6:8 for a similar call in the context of a throne vision, except that here the only one fit for the task is the lamb.

5:4. Loud wailing was normally reserved for intense mourning, such as for a person's death.

5:5. Lions were used on Torah shrines (containers which housed Law scrolls) in early Jewish art and were regarded as figures of strength and authority, but a more direct background lies at hand. The "lion of Judah" alludes to Genesis 49:9-10, which predicted the Davidic dynasty and was understood messianically in later Jewish literature (**4 Ezra,* the *rabbis). "Root of David" alludes to Isaiah 11:1 and 10 (Jesse was David's father), which suggests that the *Messiah would come after the Davidic line had seemed cut off. The image is also used messianically in later texts (e.g., Sirach), and both these images are combined in the *Dead Sea Scrolls. *Apocalypses and other texts often included dialogue with heavenly particpants in the scenes revealed (cf., e.g., Dan 7:16; Zech 4:11; 5:2).

5:6. Whereas a lion was the ultimate

symbol of power in ancient views of the animal kingdom (cf. also, e.g., Is 35:9; 65:25), a lamb was considered powerless (cf. Is 40:11); a slaughtered lamb was a dramatic contrast with a reigning lion (cf. Is 53:7). Lambs were associated with a variety of sacrifices, but in Revelation this figure may evoke especially the Passover lamb, who delivers God's people from the plagues of the following chapters (cf. Ex 12:12-13).

Many texts mention lamb's horns, but the imagery of horns as symbols for authority is rooted in Daniel 8. The seven eyes ranging throughout the earth are from Zechariah 3:9 and 4:10. John might understand them as referring to angels (the image in Zechariah is modeled after Persian royal emissaries) in Zechariah 1:10 and 6:5-7, or to God's *Spirit in Zechariah 4:6. At any rate, the eyes in Zechariah are God's eyes; here they belong to the Lord Jesus.

5:7. Various ancient documents, including wills, were sealed with roughly six seals, and sometimes seven; seals on legal documents guaranteed that no one had opened or tampered with them. A will could not be opened until the death of the person whose will it was could be attested; if a will is in view here (as some, but not all, suggest), it is significant that it is the lamb who has been *slain* who is worthy to open it. (The book may well be the lamb's book of life; cf. 3:5; 20:12. Seals were not a book's contents, but attesting marks outside it.) At any rate, under Roman law a document was valid only when the addressee had received it; it is thus ready to take effect.

5:8-14
Worshiping the Lamb

5:8. Prostration was particularly a sign of worship before gods and kings in antiquity; Jewish texts usually reserved it for God himself. The image of prayers as incense was not uncommon (e.g., Ps 141:2); here it alludes to the altar of incense and its censer in the heavenly temple (Rev 8:3). In this context, the harps probably indicate worship as in the charismatic, Levitical temple choir of old (1 Chron 25:1, 3, 6; 2 Chron 5:12; 29:25; Neh 12:27; cf. 1 Sam 10:5).

5:9-10. Offered to congregations presumably gathered in worship (chaps. 2–3), visions of heavenly worship would encourage the *church on earth that they stood in continuity with a much greater chorus than their persecutors in the imperial cult could muster. The Dead Sea Scrolls show that earthly worshipers could envision themselves participating in heavenly worship with the angels. Inspired, spontaneous psalms composed by the temple worship leaders, perhaps in response to new acts by God, had been called "new songs" in the *Old Testament (Ps 33:3; 40:3; 96:1; 98:1; 144:9; 149:1; Is 42:10).

The particular praise reflects the redemption of Israel from Egypt by the blood of the Passover lamb (see Ex 19:6 for kingdom and priests; also comment on Rev 1:6), except that the people of God now explicitly include representatives from every people, celebrating redemption in their multiethnic, diverse styles of worship. Further, they would finally reign over the rest of the earth; Jewish traditions portrayed Israel as receiving the *kingdom and reigning over the nations in the end time. Rome claimed to rule the earth, but knew of many peoples beyond its boundaries, from Iceland and Scythia (much of it in Russia) to the north, Parthia, India and China to the east, and Africa at least as far south as Tanzania. Only by faith in God's revelation could John have conceived of a church from all peoples, such as is forming today.

5:11. Dramatic numbers could highlight dramatic subjects. Some Jewish texts were given to citing fantastically large numbers of people (e.g., they listed more slain in one battle than all the people who have lived in history); more reasonably, such texts estimated even larger numbers of angels. "Ten thousand" was the largest single number used in Greek, so "ten thousands of ten thousands" (myriads of myriads) is the author's way of calling them innumerable.

5:12. An early-second-century Roman governor confirms that Christians worshiped *Christ as a god. Multiple elements in a list of praises emphasized the subject's greatness (cf., e.g., 1 Chron 29:11-12; Dan 7:14; for a king, Dan 2:37). Sets of seven praises (or other numbers) appear elsewhere also (e.g., in what became the later official text of the Passover celebration, praising God for redemption from Egypt; a *Qumran text), though John's predi-

lection for sevens is broader than and independent of such texts.

5:13-14. Although the Old Testament and Judaism believed that the world would submit to God's rule wholly in the end time, they recognized that all the elements of the universe answered to his authority in the present.

6:1-8
The Four Horsemen

The imagery is adapted from the angelic horsemen sent by God to patrol the earth in Zechariah 1:8-11 and 6:1-8, though used in a different way. Although divine judgments in history are a major *Old Testament theme, pagans also recognized and would have understood John's point; most cultures in history have recognized the existence of divine judgments. (Romans in fact kept official records of reports of omens portending disaster.) Jewish *apocalyptic traditions associated some of these judgments, such as war and famine, with the time just preceding the end of the age, though many believe that many early Christians applied that designation to the entire period between the *Messiah's comings; cf. Matthew 24:6-8.

6:1. A document could not be opened until all the seals were broken (i.e., in Revelation, after 8:1); the seals (in this case judgments) witness the validity of the document's contents. (In divine documents, witnesses need not be only human; in the Old Testament covenant, heaven and earth are called to witness; cf. Deut 30:19; Ps 50:4.)

6:2. The Old Testament uses the "bow" as a symbol of judgment by battle. The image of an archer on a white horse might terrify hearers in the Roman Empire. The only mounted archers with which most were familiar were the Parthians, whose tactics and skills had made them Rome's most feared enemies; old Persian armies, whose heirs the Parthians were, included sacred white horses. Parthians had defeated Roman armies in some recent wars; Parthians' skill as archers was common knowledge, and other contemporary apocalyptic writers (**Similitudes of Enoch*) also suggested a dreaded Parthian invasion. But even if based only on the bow, ancient hearers would have readily understood that this horseman meant conquest and war.

6:3-4. The "sword" was often a symbol of judgment by war in the Old Testament and later literature, and red was the color most associated with war and bloodshed (hence the "red planet" is named Mars for the Roman god of war). The bloody unrest of A.D. 68–69, when three emperors were successively killed in Roman civil wars, would have offered one illustration of the principle here.

6:5-6. Famine and pestilence often followed in the wake of war. Basic staples of the ancient Mediterranean diet were barley and wheat, sometimes cheese and olives, and (for those living near water) fish. The "scales" indicate rationing, or at least the caution of merchants to get every cent the food is worth. Barley and wheat were basic staples. Because a quart of wheat was a day's sustenance, and a denarius was a day's wage, a man with a family would have to buy the cheaper barley instead. Even then, three quarts of barley was hardly enough daily food for a whole family to subsist on; in the many peasant families with large numbers of children, several children would die (as often happened anyway in impoverished areas such as Roman-period Egypt). The famine also created a high inflation rate: this wheat costs between five and fifteen times the average price of wheat.

Some mercy may be implied here; conquerors tended to ravage standing crops while sparing fruit trees and vines, since these took long to grow back and conquerors hoped to control the land. (Olive trees took roughly seventeen years to grow.) Nevertheless, the image would hold the attention of John's audience; much of western Asia Minor imported much of its grain, locally focusing on more lucrative products such as wine. Oil and wine were widely used, but were not essential for life like wheat or barley. Olive oil was especially used for anointing the head, washing the body and lighting lamps; wine was mixed with water (one part wine for two to three parts water) for meals. The selective continuance of such items of relatively secondary importance while staples were barely obtainable would reinforce the reality of divine judgment. Because inflation was high at the end of the first century and some readers were no doubt aware of Domitian's unpopular restriction of land for vineyards, many hearers could have readily

identified with the terror such prophecies implied. Asia Minor, though one of the wealthiest areas in the Roman Empire, experienced economic troubles during Domitian's reign.

6:7-8. This final specter may resemble the angel of death of Jewish tradition. Lists of judgments such as this horseman brought are common in the Old Testament prophets (e.g., Jer 14:12; 24:10; 27:8; Ezek 6:11; 7:15; 12:16) and, less related in form, some judgment lists in the **Sibylline Oracles;* this list is closest to Ezekiel 14:21.

6:9-11
The Fifth Seal

Some of the seven *churches (such as Smyrna) were suffering, but others (such as Laodicea) were comfortable. Like many *Old Testament prophecies (e.g., Amos 6:1), this message could disturb comfortable people. By contrast, oppressed and suffering people who trust God could resonate with the promise of vindication.

6:9. The blood of sacrifices was poured out at the base of the altar (Lev 4:7, 18, 25, 34; 5:9; 8:15; 9:9); the martyrs are thus viewed as sacrifices, presumably associated with the Passover lamb of Revelation 5:6. (Paschal lambs had come to be viewed as sacrificial in some sense. Martyrs were also viewed as sacrifices in, e.g., *4 Maccabees; cf. Phil 2:7.) On heavenly temple imagery (such as the altar here), see comment on 4:6. Souls could be "visible" to recipients of *apocalypses, due to the seers' visionary state.

6:10. The very fact of their shed blood (6:9) cries out for the vindication of retribution (Gen 4:10; see comment on Mt 23:35); as in the Old Testament, a prayer for vengeance for corporate sin was ultimately a prayer for the vindication of the righteous and of God's name. Justice could ultimately be done, and the oppressed delivered, only when God arose to judge the earth. "How long?" was common in Old Testament prayers of entreaty (e.g., Ps 6:3; 13:1; 80:4), including prayers for vindication (e.g., Ps 79:5, 10; Zech 1:12); it also could address the duration of a judgment (Is 6:11; Jer 47:6).

6:11. Other Jewish texts also include prayers for vengeance and protests over delays (6:10); the souls of the righteous in **4 Ezra* (probably from the same period as Revelation) ask how long until the end and are told that they must wait until the full number of righteous dead is completed. Jesus and Paul had also earlier stressed that the good news must be preached to all nations—with the attendant suffering for witnesses involved in such proclamation—before the end. On white robes, see comment on 4:4.

6:12-17
The Sixth Seal

Although cosmic, cataclysmic language is sometimes used for God's judgments in history (e.g., an already fulfilled judgment in **Sibylline Oracles;* cosmic exaggerations of Sinai phenomena in *Pseudo-Philo; cf. Ps 18; Jer 4:20-28), the language of this passage lends itself most naturally to the view that it, like the sixth and seventh trumpets and vials, represents the end of the age (as cosmic destruction generally does in the *Old Testament prophets and Jewish literature).

6:12-13. An Old Testament *prophecy associated the end of the age with a powerful earthquake (Zech 14:4-5; cf. Ezek 38:20; Amos 8:8); because severe earthquakes had wrought devastation in first-century Asia Minor (including cities such as Laodicea), this announcement would have special impact on the readers. Darkness was also an Old Testament judgment (Ex 10:21-23; Is 50:3), especially the judgment of the end (Joel 2:31; Is 13:9-10; 24:23; Ezek 32:7-8; Amos 5:18; 8:9; cf. **4 Ezra*). The stars may symbolize angelic hosts (12:4; Is 24:21; Dan 8:10; 10:13), but in this context they probably depict simply the cosmic scope of the judgment (Is 34:4). The graphic language is not meant as literal astronomy: disappearing or shaken stars were used as poetic language for great devastations such as wars (*Sibylline Oracles;* *Petronius; cf. Is 13:10, 17).

6:14. A reader would unroll a scroll with the right hand to read, rolling up again the part just read with the left; the language here reflects Isaiah 34:4, which is also echoed in other Jewish judgment oracles (*Sibylline Oracles*). This sort of language was normally reserved for the end of the age.

6:15-16. The Old Testament and *apocalypses also speak of judgment across social classes; the readers could be encouraged that God would ultimately vindicate them against the emperor and his governors who now

judged them. Hiding in the rocks and crying for the mountains to conceal them from God's wrath reflects Hosea 10:8; cf. Isaiah 2:10 and 19-20. (Christians in Sardis may have thought of the cave-tombs in the necropolis facing their city, though the image is not relevant to them alone.) Lambs were particularly docile creatures; "wrath of the lamb" is thus a jarring image.

6:17. This verse reflects especially Joel 2:11; cf. Malachi 3:2, referring to the day of judgment.

7:1-8
The Sealing of 144,000 Servants

Some take the 144,000 consistently literally (literally twelve thousand male Jewish virgins from each tribe—14:4); others take them consistently symbolically (the spiritual people of God, not literally 144,000). Against taking it literally could be Revelation's usage elsewhere of "servants" (1:1; 6:11), suggesting that they constitute the whole of the saved community (7:3-4). But whether they represent the innumerable multitude of 7:9 or the restored remnant of ethnic Israel remains debated.

"After this I saw" (7:1) means that this vision follows the preceding one, not necessarily that the events it describes do (see comment on 4:1); if 6:12-17 represents the end of the age, 7:1-8 must precede that event chronologically (7:3), perhaps concurrent with the whole of 6:1-11 or simply 6:12-17.

7:1. *Gentiles often personified the elements of nature themselves or recognized gods attached to them; Jewish people believed that God had delegated his authority over various features of nature (including winds) to angels under his command (e.g., in **Jubilees;* cf. Ps 148:1-12). "Four corners" of the earth was meant figuratively, even in ancient times. A few people thought that the world was spherical, but most people viewed it as circular; "four corners" was nevertheless conventional speech, as was the idea of four winds from the four directions of heaven (probably viewed as angels even in Zech 6:5). The winds had both positive and negative effects in ancient sources. According to some views, the wind carried along the sun and moon chariots (**1 Enoch* 72:5; 73:2), or God founded the heavens on the winds (*1 Enoch,* **Joseph and Asenath*), and the stoppage of winds could signal the advent of a new age (*Sibylline Oracles,* on the postdiluvian era). Like writers today, the biblical writers used the language conventional to the *genre in which they were writing; this could include, as here, symbolic imagery.

7:2. In the most popular ancient conception, Helios drove his sun-chariot in a regular course above the earth, rising from the gates of the east and descending into the west to return by its path under the earth; the earth-circle was surrounded on all sides by the river Oceanus. Jewish people naturally modified the sun god into an angel; but any angel that would rise in the orbit of the sun would have been recognized as superior to the greatest of the kings of the earth. The expression here could also simply emphasize that the angel comes from the east (cf. Is 41:25), hence the universal extent of God's rule (cf. Ps 50:1; 113:3; Is 59:19; Mal 1:11).

"Seal" refers to the impress of a signet ring; an official who wished to delegate his authority for a task to a representative would allow that subordinate to use his signet ring.

7:3. Like documents or merchandise sealed and stamped to guarantee their contents and prevent tampering, God's servants were to be marked off as his (cf. Is 44:5). God had previously protected his people in Goshen during the plagues (Ex 8:28; 9:4; 11:7; see comment on Rev 5:6); the idea of a protecting sign is also an *Old Testament image (Gen 4:15; Is 66:19). Here it is taken directly from Ezekiel 9:4-6, where judgment could not begin until the foreheads of the righteous (those who mourned over the sin of their land) were marked. The forehead and the hand (Ex 13:9, 16; 28:38; Deut 6:8; 11:18) were the most natural and obvious parts of the body for this marking because they were most directly exposed to view.

With the possible exception of Genesis 4:15, all these Old Testament passages probably meant the sign symbolically (despite more literal postexilic Jewish practice of *tefillin,* phylacteries); Ezekiel 9:6 certainly did not mean a humanly visible mark, and Revelation presumably means it in the same sense as Ezekiel (cf. other writings in Rev 3:12; 17:5; 19:16; 22:4). In Hebrew, Ezekiel's mark was the Hebrew letter *tav;* in ancient script it looked like, and

*rabbis compared it with, the Greek letter *chi*—similar to English *x*—which some Christian commentators have compared (perhaps wishfully) with the cross sign. Comparisons have also been made with branding animals; with the occasional but well-documented tattooing of slaves and, later, soldiers; with religious tattooing (e.g., in Mithraism); with spiritual circumcision (circumcision was called a seal); and with the divine imprint on humans (Philo), here applied specifically to those who live according to that image. See comment on Revelation 13:16-18 (for the mark opposed to this one) and on Galatians 6:17; cf. **4 Ezra* 6:5; 10:23; **Psalms of Solomon* 15:6-9 (for invisible marks for both the righteous and the wicked); and **Testament of Job* 5:2.

7:4. Because this is the full number of God's servants (7:3), the righteous (1:1; 2:20; 22:6), the number and ethnic designation may be meant figuratively for true followers of Israel's God (followers of Jesus; cf. 2:9; 3:9; 21:2, 14). Whether this number is meant figuratively or literally, however, the allusion is clearly to the Old Testament and universal Jewish conception of Israel's restoration (cf. comment on Rom 11:26-27), which is pictured, as generally, in terms of the restoration of the remnant (survivors) of the twelve tribes. Some suggest that the numbering by tribe evokes the Old Testament custom of a military census, indicating that these represent the end-time army expected in some Jewish circles (e.g., the *Qumran War Scroll), except here as a *spiritual* army (cf. comment in Rev 14:1-5).

7:5-8. The normal Jewish understanding was that the twelve tribes would inherit the land together (Ezek 48). Yet by counting Joseph and Manasseh (the tribe of Joseph was usually broken down into two tribes, represented by his sons Manasseh and Ephraim) without omitting Levi, Revelation has to omit another of the tribes, and omits Dan, the first in Ezekiel's list (48:1), in order to maintain the number twelve. (Jewish commentators as early as the second century associated Dan with idolatry, but no emphasis on that special association has been documented this early. Dan's sins [Judg 18:30; 1 Kings 12:29; Amos 8:14; cf. *Jubilees* 44:28-29] are not the only ones mentioned in the Old Testament, and the association with the serpent [Gen 49:16-17] is too remote here.) Some scholars believe that this omission underlines the symbolic nature of John's point in the whole passage; one tribe might be omitted to indicate the danger of apostasy even among the people of God (cf. Jn 6:70; 1 Jn 2:19). The sequence of tribes itself is probably not significant—it varied considerably in the Old Testament.

The twelve tribes no longer existed as separate entities in the first century; with few exceptions, only Judah, Benjamin and Levi were recognized as ancestors, and today even most of those distinctions are no longer certain. The exact number, twelve thousand from each tribe, is another indication of the symbolic nature of the passage—twelve was the number of the people of God in Jewish texts (e.g., *Dead Sea Scrolls), and 144,000 is 12 x 12 x 10 x 10 x 10. Symbolic numbers were standard fare in Jewish views of the future (see especially comment on the times of Revelation 12).

7:9-17
The Multitude of Overcomers Before the Throne

This section may represent a different group than the one pictured in 7:1-8, or another picture of the same group now in heaven (double versions of visions sometimes occur in the *Old Testament too; cf. Gen 41:25-27; interpretations of visions also appear, e.g., in Daniel, **4 Ezra* and **2 Baruch*).

7:9-12. White robes were appropriate for worship in the temple and were also used for the worship of gods in Asia Minor. Jewish people regularly used palm branches in the celebration of the Feast of Tabernacles (Lev 23:40; Neh 8:15). In the future, the remnant of all nations would go up to Jerusalem to worship at the Feast of Tabernacles (Zech 14:16); as in *apocalyptic texts, the earthly future realm is in some sense presently fulfilled in heaven (cf. Rev 7:15). Palm branches celebrated the victory of Israel's exodus from Egypt, and the feast commemorated God's faithfulness to them during their wanderings in the wilderness, when they were totally dependent on him. More generally, palm branches celebrated victory, hailing the victors (cf. 1 Maccabees 13:51; 2 Maccabees 10:7). Ironically, if these are martyrs, they triumphed by

being faithful to death (see comment on 2:10), and they hail the slain lamb.

Some scholars have suggested that these multitudes are the martyrs or martyr *church of 6:11, viewed from another perspective. "Innumerable" meant that the crowd was huge, too many to count—not infinite (*3 Maccabees 4:17; it could also represent a number so great that it could be pictured as the sands of the sea in number, as in Judith 2:20).

7:13-14. Jewish teachers sometimes asked questions they knew their *disciples could not answer; the disciples then responded by asking for the answer. The same teaching technique is employed here. Jewish apocalypses and their occasional Roman analogues often included angelic guides (e.g., **1 Enoch* and *3 Baruch*) who asked the mortal observer *rhetorical questions to guide him to a truer understanding (e.g., *4 Ezra* and *Testament of Abraham;* cf. Dan 8:13-14; 12:6-7); in other texts confused visionaries simply had to ask to begin with (Dan 7:16; 12:8; *4 Ezra*) or wait for an interpretation (Dan 8:16).

"The great tribulation" refers to Daniel 12:1, the period of great suffering that God's people were to experience before the end of the age. Making robes white with blood is a ritual rather than visual image: sacrificial blood purified utensils for worship in the Old Testament (see comment on Heb 9:21-22), and white was the color of robes required for worship in the *New Testament period.

7:15-16. God's tabernacle as a refuge over them directly echoes Isaiah 4:5-6, which in turn alludes to a new exodus of salvation in the future time. When God redeemed his people from Egypt and they wandered in the wilderness (the time commemorated in the Feast of Tabernacles; see comment on Rev 7:9-12), he made such a cloud over them as Isaiah describes. Revelation also borrows the language of Isaiah 49:10 (again the salvation of the future age); cf. Psalm 121:5-6. What differs from Isaiah 49:10 here is that God's people now include representatives of many nations (Rev 7:9) and that the lamb fills the divine role. On God's throne room in heaven being portrayed as a temple, see comment on Revelation 4:6-7.

7:17. This verse alludes to Isaiah 25:8 (in the context of the messianic banquet at the *resurrection at the end of the age) and 49:10 (in the *age to come). For the imagery of the shepherd (here graphically juxtaposed with the lamb), see the introduction to John 10:1-18.

8:1-5
Preparing for the Trumpet Plagues

8:1. There are a number of possible ways to interpret "silence" here. In some texts, silence could characterize the end of the present world to form a new world (**4 Ezra* and **2 Baruch;* cf. *Pseudo-Philo). In this context of worship (7:9-12) and intercession (6:9-11; 8:4) in heaven, some suggest that "silence" could mean a brief delay in God's reception of his people's prayers for vindication (Ps 50:3, 21; 83:1) or silencing heaven's praises to receive his people's prayers (Rev 8:4), as in some later Jewish texts.

Perhaps more likely, it could be a form of awed worship (Ps 65:1) or perhaps of fear, grief or shame, as with the muzzled mouths of the guilty with nothing to say in their defense at the judgment (Hab 2:20; Zeph 1:7; Zech 2:13; cf. Ps 31:17-18; 76:8-10; Is 23:2; 41:1; 47:5).

8:2. Trumpets were used for celebrations, to call sacred or military assemblies, and as summons to battle, military signals or alerts, often warning of impending invasions. It is in this last sense that the prophets usually employed the image, and this is probably also why Revelation uses it. Given heavenly temple imagery elsewhere in Revelation, the use of trumpets in the temple might also be relevant (2 Chron 7:6; 29:26; Ezra 3:10). Although John undoubtedly would have used "seven" anyway (given his three sets of seven judgments each), commentators note that series of seven trumpeters appear in the *Old Testament (Josh 6:6, 13), probably regularly in the temple cult (1 Chron 15:24; Neh 12:41). Again, though seven angels would be needed for seven trumpets in any case, it is noteworthy that between the time of the Old Testament and the time of the New Testament Judaism had settled on seven archangels (adding five to the two important angels named in Daniel), who "stood before God."

8:3. The angel fulfills a task assigned to a priest in the earthly temple. For the heavenly temple in Revelation, see comment on 4:6-7; as in some other Jewish texts (including in the

Old Testament, in Ps 141:2), prayers are presented as incense (some texts portrayed them also as sacrifices). For the heavenly temple in Jewish texts in general, see comment on Hebrews 8:1-5.

8:4-5. In this context, the continual prayers of the *saints for vengeance (6:9-11) are the direct cause of their eventual vindication through judgments on the earth (8:6–9:21). On the image of atmospheric phenomena caused by angelic activity, see comment on 4:5; cf. 11:19 and 16:18.

8:6-12
The First Four Trumpet Plagues

The sorts of judgments characterizing the judgments of the trumpets and bowls evoke especially the ten plagues of the exodus (although they are numerically adjusted to seven; see comment on Jn 2:11, the first of probably seven signs in John). As in other Jewish texts (e.g., *Pseudo-Philo, Artapanus), the sequence and even number of the plagues is not important for the point of the image. Some of the plagues are echoed in other judgment texts (especially **Sibylline Oracles*) but never as systematically as here.

8:6. See comment on 8:2.

8:7. This plague echoes the seventh plague in Exodus 9:24-25. The mixture of hail and fire evokes the image in Ex 9:23-24 and Ps 105:32, where the fire probably alludes to lightning. The mixture with blood here probably evokes the plague of blood (see comment on Rev 8:8-9).

8:8-9. Waters running with blood would normally indicate war (e.g., Is 15:9), but these verses also echo the first plague in Exodus 7:20-21. The mountain hurled into the sea characterizes the sort of imagery standard in this type of literature (e.g., the burning star hurled into the sea in what may be a roughly contemporary oracle in *Sibylline Oracles*). The suggested parallel to Babylon as a burning mountain in Jeremiah 51:25, 42 is not as obvious, but it may have informed both Revelation (which elsewhere cites this section of Jeremiah, e.g., in Rev 18:4) and the *Sibylline Oracles*.

This plague addresses contamination of the water supply, effecting not only many swift deaths by dehydration but also long-term devastation by destruction of Egypt's irrigation and fishing (Ex 7:18) resources.

8:10-11. Like the preceding plague, this judgment alludes to the poisoned water of Exodus 7:20-21, but through a sort of poisoning or embittering agent called "wormwood" (Jer 9:15; 23:15; cf. Jer 8:14), often used figuratively (for idolatry—Deut 29:18; fruits of adultery—Prov 5:4; suffering—Lam 3:19). This plague strikes local freshwater supplies and would naturally worry John's readers in Asia, especially in Laodicea (see comment on Rev 3:15-16).

8:12. This plague echoes the ninth plague in Exodus 10:22-23; many ancient texts speak of darkness as a dreaded judgment, and the *Old Testament (see comment on Rev 6:12-13) and some other Jewish texts also associate it with the end time.

8:13–9:11
The Fifth Trumpet Plague

8:13. The announcement of three impending woes indicates that as negative as the first four trumpet plagues were, the worst is yet to come. "Woe" often begins a new oracle in **1 Enoch* and probably serves a similar function here.

The eagle was a symbol of imperial Rome carried by the legions and used on Herod's temple, but that symbolism may be irrelevant here. Perhaps more to the point, eagles were used as messengers in some texts (*4 Baruch*); Romans could view them as omens; they could symbolize God's protection (Rev 12:14); or the term here could mean (as it often does, including in the *LXX) "vulture," indicating a bird of prey (see 19:17), and thus imminent doom. Finally, it might simply reflect God's sovereignty over all his creatures (cf. 4:7). "Midheaven" (NASB, NRSV) is the level of heaven between God's throne and the lowest atmosphere (in the minimal three-heaven scheme of some ancients—on which see comment on 2 Cor 12:2-4—but also in some other schemes, e.g., in *2 Enoch*).

9:1-2. Many Jewish traditions spoke of evil angels imprisoned in dungeons or rivers, awaiting their time to come out and wreak havoc. Some ancient writers assumed that the "abyss" (NIV, GNT; "bottomless pit"—NASB, KJV, NRSV) was a real geographical place that could be found on earth (*1 Enoch*); angels were as-

signed over such sites and given keys. Most pagans held stars to be divinities, and many Jews held them to be angels; stars could naturally symbolize angels in Jewish texts, as in this case. John exploits the standard imagery to make his point.

9:3. In view of the larger context evoking Exodus's plagues, this plague recalls the eighth plague in Exodus 10:12, the locusts. Maintaining the imagery characteristic of much *apocalyptic and prophetic revelation, however, John's vision transmutes these locusts into something far more terrifying. Joel apparently describes an imminent locust plague in terms of armies (e.g., 1:4; 2:11, 20, 25) and also describes a final war (3:9-17). John borrows Joel's imagery here (e.g., Joel 1:6; 2:4-5) to amplify the imagery of a locust plague into a terrible invasion.

9:4. See comment on 7:3. Ordinary locusts would have feasted on the vegetation and left the people alone.

9:5. Scorpion stings were among the most intense pains (1 Kings 12:11; 2 Chron 10:14); but a pain lasting five months (9:10, unless this is simply the duration of the plague; one commentator says that five months fits the approximate lifespan of a normal kind of locust) was unheard of. Jewish texts often included scorpions as one of God's means of judgment.

9:6. Only the severest sufferings prompted a preference for death over life (Jer 8:3); but even death will be withheld during this plague.

9:7. An invasion of locusts could be described as warhorses (Joel 2:4), and horses could be described as being as numerous as locusts (Jer 51:27; cf. 51:14). The crowns might reflect prior military exploits or that they command still other locusts. Peoples such as Greeks and Babylonians envisioned various kinds of composite monsters evoking parts of different creatures (from centaurs and griffins, more positively, to snake-haired Gorgons). The image of human-faced scorpions derived from nightmarish traditions from the East, and Mediterranean zodiacs eventually applied it to Sagittarius, who was often portrayed with long hair (see comment on 9:8). Although the image is not meant literally, it draws on the most terrible, repressed images of that culture's unconscious fears to evoke horror at the impending judgments.

9:8. Joel 1:6 described locusts with "teeth like lions" to emphasize their destructiveness to the crops and everything else. In Joel, the image would terrify an agrarian society; in Revelation, it would remind readers of the lion's proverbial ferocity. The "hair like women" might evoke a particular military threat known to John's audience: everyone in the Roman Empire knew that "barbarians" outside the empire, unlike most people in Greco-Roman society, had long hair. In the context of a military invasion, the readers might immediately think of the Parthians (or, in apocalyptic terms, perhaps the spiritual realities behind them). By way of illustration, the reigning emperor Domitian's father was reported—perhaps fictitiously—to have joked about the Parthians' long hair in view of a long-tailed comet portending his death. Thus Revelation, employing dramatic imagery of its day, communicates a terrible invasion.

9:9. The "noise of chariots" is borrowed from the military imagery for locusts in Joel 2:5; the swarms would be so intense that they would sound like an invading army, a sound great enough to make a land quake (Jer 8:16). The scales of a kind of locust's thorax are compared with scaled armor in a later Jewish text; here John uses a more updated armor image.

9:10. Their tails may be mentioned simply because that was the weapon of scorpions (9:5), but the reverse could also be true; scorpions could be mentioned because of the tails. It may be of interest that the Parthians (9:8) had become famous for their rearward archery: they had retreated up hills mounted on horseback, and when unwary Roman legions had followed them, the Parthians had released a backward hail of arrows, wiping out several legions before the Romans learned not to follow them up hills. Although the lifespan of different kinds of locusts varies significantly, many live roughly three to five months.

9:11. "Abaddon" is a Hebrew name for the lowest depths of the earth, the realm of the dead (cf. Job 31:12; Ps 88:11; Prov 27:20); the *Dead Sea Scrolls also linked the "spirit of Abaddon" with the "angel of the pit." "Apollyon" means "destruction" in Greek. (Some scholars have secondarily connected the name to Apollo, a Greek deity, one of whose totems was the locust patron, but the allusion is disputed.)

The final, terrifying touch to this description of an army with elements from Joel's locusts, from Parthians and from scorpions is that these are the armies of hell, sent by death itself to fill its bowels.

9:12-21
The Sixth Trumpet Plague

Parthians were Rome's most feared enemies in this period. They were portrayed as untrustworthy, and the authority of their monarchs was absolute. Older Greek prophecies about an eastern invasion of the Roman Empire still made some Romans nervous, and the Jewish *Sibylline Oracles* prophesied that Nero would return, leading Parthian hordes in vengeance on Rome. (Many Jewish people lived in Parthian territory, and many Jews in the Roman Empire felt no more allegiance to Rome than they would have to Parthia; in the Jewish-Roman War of 66–70 many Jews expected Parthia to intervene on their behalf, but their hopes were disappointed.)

9:12. See comment on 8:13.

9:13. On the temple imagery, see comment on 4:6-7. Ancient Middle Eastern altars typically had four horns.

9:14. Pervasive references in ancient literature reveal that it was common knowledge that the river Euphrates (16:12) was, above all else, the traditional boundary between the Roman and Parthian empires. Some other Jewish texts speak of fallen angels being bound in the depths of various seas, able to be released only at the command of God or one of his angels.

9:15. For all their recognition of demonic forces in this age, apocalyptic writers recognized also the standard Jewish doctrine that God ultimately rules all of history. Casualty statistics like this one are also familiar in Jewish judgment oracles (see the *Sibylline Oracles*). Some scholars suggest mercy in the statistic (contrasting two-thirds of God's people destroyed in Zech 13:8, and of the world in the *Sibylline Oracles*).

9:16. Parthians were noted horsemen; in contrast to Rome, whose only cavalry contingents were drawn from its auxiliary (non-Roman) units, the Parthians were renowned for their cavalry. "Two hundred million" would be a huge standing army even today (only about one-sixth the population of India, but close to the entire population of Brazil, roughly two-thirds the population of the United States, nearly forty percent more than that of Mexico, a quarter more than that of Nigeria, and nearly six times that of Canada); in the first century it probably represented more than the population of the entire Mediterranean world.

9:17-18. The "dark blue" (NIV; "hyacinth"—NASB; or "sapphire"—NRSV) might allude to the color of the smoke of sulfur's flame. Cf. 9:7-8 for the source of the image of horses and lions; lions were considered the most ferocious and regal of beasts, which no one cared to meet. In a widely read Jewish wisdom book, a writer had declared that God could have punished idolatry by sending lions or newly created, fire-breathing and smoke-belching monsters (Wisdom of Solomon 11:17-20). But again this imagery may be mixed with the threat of a Parthian invasion: Parthian archers often used flaming arrows.

9:19. The power "in their tails" may allude to scorpions or to the Parthian cavalry's rearward archery (see comment on 9:10).

9:20-21. Jewish people commonly regarded the unrepentance of the world in the face of obvious judgments (e.g., Ex 7:22-23) as a sign of stupidity. (Even some pagan philosophers pointed out that divine judgments were acts of mercy, to bring the wicked to *repentance, as well as acts of justice; in this view they agreed with the *Old Testament—e.g., Ex 8:10; 9:14, 29; 10:2; 14:4; Amos 4:6-11.) Old Testament prophets and later Jewish writers frequently ridiculed the worship of idols (cf. Rev 2:14, 20) that were less powerful than those who made them (e.g., Ps 135:15-18; Is 46:6-7). That pagans worshiped *demons was also widely accepted in Jewish circles (e.g., *1 Enoch;* 1 Cor 10:20). Idolatry and immorality were standard parts of Greco-Roman culture; thieves and sorcerers were, however, considered dangerous by common consent.

10:1-7
The Mysteries of the End

10:1. Jewish literature pictures a number of angels as being as high as the highest heavens, often shining like the sun (*2 Enoch; *3 Enoch;* *rabbis; cf. Dan 10:6; cf. the Greek figure Atlas).

Both evil angels (*1 Enoch*) and good angels could be very tall. Sometimes they were crowned (e.g., *2 Enoch; 3 Enoch*), in this case with a rainbow; in *3 Enoch,* even the crown is more than a five-hundred-year journey high. (Sometimes such language was also used figuratively, e.g., for a particular *high priest.) John borrows the imagery of his day for a powerful angel over creation (see comment on Rev 7:1). *Apocalypses typically portrayed such glorious angels to imply the infinitely greater majesty of their creator.

10:2. The seals having been opened (6:1–8:1), the contents of the book may now be examined ("open"). The angel's enormity and his feet on both land and sea may indicate how great his dominion is.

10:3-4. Something remains sealed (cf. 22:10), indicating that some mysteries must remain mysteries until the end (Deut 29:29). On unspeakable revelations, see comment on 2 Corinthians 12:2-4. The text implies that John is taking notes (as rabbinic or especially Greek students sometimes did) or writing down what he hears and sees; one could write down visions or utterances as others were having them (e.g., **Testament of Job* 51, a section admittedly of uncertain date).

10:5-6. Raising one's hand toward a god was used in solemn oath formulas in Greek culture as well as in the *Old Testament and later Jewish literature. Here John alludes to Daniel 12:7, where an angel lifted his hands toward heaven and swore by the one who lives forever that there would be only three and a half more years until the end; here this angel swears that the time has come, and there is no further delay. (Some apocalyptic texts spoke of countable time itself ending, but the point here seems to be "time before the end," given Dan 12:7; cf. Rev 2:21; 6:11; 20:3; Hab 2:3.)

10:7. All the Old Testament promises, both of judgment and of restoration, came to a head in the day of the Lord.

10:8-11
A Bitter Message for the Nations

This account is based on Ezekiel 2:8–3:3, where a hand is extended to Ezekiel containing a scroll, written on both sides (cf. Rev 5:1) with a message of three kinds of judgment. Ezekiel ate the scroll, which tasted sweet to his mouth but was a message of judgment for Israel.

10:8-10. These verses are based on Ezekiel 2:8–3:3; another contemporary *apocalyptic writer (**4 Ezra*) drew more loosely on the same imagery. Sin tasted sweet like honey but was poison because it led to judgment (Prov 5:3-4; cf. Num 5:23-31); but the sweetness here is the word of the Lord (cf. Prov 24:13-14; rabbis), and the bitterness is the bitterness of judgment that John must proclaim. On an angel talking with the visionary, see comment on Revelation 7:13-14.

10:11. Ezekiel's message from the book (see comment on 10:8-10) was for Israel, but John prophesies to many nations (like Jeremiah; Jer 1:10). The Jewish Sibyl in the **Sibylline Oracles* conceived her task as prophesying concerning all nations (cf. Rev 11:2), but this was standard with many *Old Testament prophets, who uttered oracles against the nations, to which John's are much closer (Is 13–23; Jer 46–51; Ezek 25–32; Amos 1–2).

11:1-13
The Two Witnesses

John uses Old Testament language for prophets (Elijah, Moses) and a *high priest and king (from Zechariah) to describe these witnesses. On a literal futuristic reading, they could refer to the new Moses and Elijah expected in Judaism; conversely, Revelation could have recycled these expectations as symbols for the prophetic calling and joint aspects of the *church, as rulers and priests (Rev 1:6; 5:10), especially since this is the meaning of lampstands elsewhere in the book (1:20).

11:1. Measuring the courts of God's house (21:15) was one way of praising the magnificence of the building whose construction was meant as praise to God (Ps 48:12-13; Ezek 40:3–42:20; Zech 2:1-5; cf. **Similitudes of Enoch,* where paradise is measured). A "reed" (NIV, KJV) could be used as a surveyor's rule (hence "measuring rod"—NASB, NRSV, GNT).

11:2. The sanctuary had been trodden down before (Is 63:18; 1 Maccabees 3:45; 4:60), and its desolation was portrayed as the typical goal of pagans (Judith 9:8), but here only the outer court is trodden down. Yet the whole temple was destroyed in A.D. 70, and (with most scholars) Revelation was probably written in the 90s. Even the literal treading

down of the outer sanctuary had taken place more than forty-two months before John's time, perhaps implying that the number was symbolic for the whole period from its devastation in some sense until its restoration (see comment on Rev 12:6).

If the heavenly temple is meant (11:19; see comment on 4:6), the outer court would be meant symbolically. Perhaps as at *Qumran, the temple stands for God's chosen remnant (cf. 21:3). The outer court was the only court *Gentiles were allowed to enter. Although the literal outer court was in ruins like the rest of the temple, the image might refer to some danger such as pagan spiritual domination over the church as Israel's spiritual remnant (cf. 2:9; 3:9) or over the holy land or Jewish people, or to the lack of a temple; even while the temple stood, many felt that it was spiritually impure (e.g., *Dead Sea Scrolls).

11:3. On the 1,260 days, see comment on 12:6; based on a 360-day year, this was the same as forty-two months or three and a half years (Daniel used all three figures). Sackcloth was proper Old Testament apparel for mourning or *repentance; the two witnesses are apparently lamenting the sins of God's people (e.g., Joel 1:13; Jon 3:6; **Joseph and Asenath;* clothing for prophets in *Ascension of Isaiah,* etc.). Two witnesses was the minimum number acceptable under Old Testament *law (Deut 17:6; 19:15).

11:4. The source of the image is clear: Zechariah 4:2-3 presented two seven-branched lampstands and two olive trees, which represented the two anointed ones (Zech 4:14): the king and the priest (Zech 6:13). In Zechariah's day they represented Zerubbabel and Joshua. (Thus *Qumran in some periods in its history stressed two future anointed figures, a messianic king and an anointed priest.) John might connect the image with a kingdom and priests (Rev 1:6; 5:10).

That they "stand" (currently) could indicate, as some (e.g., the second-century North African Christian Tertullian) have suggested, an allusion to Old Testament figures who did not die (cf. also **4 Ezra*)—Elijah, Enoch (according to the most common reading of the Old Testament) and Moses (according to some Jewish storytellers, against the plain sense of Deut 34). They could also simply represent the church, whose heavenly representatives are already before God (Rev 4:4; cf. Mt 18:10). The two anointed ones in Zechariah 4:14 "stand" by the Lord of all the earth.

11:5. Elijah seemed to have a spiritual gift for calling down fire from heaven (1 Kings 18:38; 2 Kings 1:10, 12; cf. Lev 9:24–10:2). But what appears to be an allusion to Elijah is slightly modified: the fire comes from their mouths (perhaps symbolic for efficacious proclamations of judgment—Jer 5:10, 14). (Later Jewish texts expand this gift to Joseph, Abraham and others; later *rabbis told stories of earlier pious rabbis, especially Simeon ben Yohai in the second century A.D. and Johanan in the third, who disintegrated disrespectful men by gazing at them spitefully.)

11:6. Elijah had "shut" the sky, bringing drought in obedience to God's word (1 Kings 17:1; 18:41); according to a probable Jewish tradition, this was for three and a half years (cf. also Jas 5:17; Lk 4:25). Authorization to turn water to blood clearly recalls Moses (Ex 7:14-25). Jewish people were expecting both a new prophet like Moses (Deut 18:15-18) and the return of Elijah (Mal 4:5); in the language of their power, Revelation describes the mission of the two witnesses, possibly the church (see introduction to 11:1-13).

11:7. Developing Old Testament pictures of the end (Zech 14:1-3), Jewish texts commonly expected this age to end with a long, climactic battle, which often included suffering for God's people but culminated in their ultimate triumph (cf. both sufferings of the final generation and spiritual battle plans in the War Scroll in the Dead Sea Scrolls).

11:8. Throughout the ancient world, refusing to bury the dead (sometimes a punishment for the worst crimes) was the greatest cruelty one could offer (e.g., Is 5:25) and was usually a mark of grave impiety as well. As Paul contrasts the earthly and heavenly Jerusalem (Gal 4:25-26), so Revelation may do here (the place of Jesus' crucifixion); the Old Testament prophets often compared Jerusalem or Israel with Sodom (e.g., Is 1:9-10; Jer 23:14). As Egypt had oppressed Israel, so Jerusalem's authorities had oppressed the true followers of God. The association of Jewish authorities with the persecution of the church held true at least in some cities in Asia Minor (Rev 2:9;

3:9); compare this city with Babylon in chapters 17–18. In contrast, some scholars have pointed to the use of the "city" for Rome elsewhere in Revelation, arguing that the city here is Rome, who martyred *Christ in Jerusalem, or the world system as a whole. All of those hostile to the church might be blended together as the world city. (When used figuratively, "the prostitute" [Rev 17] in the Old Testament was almost always used for Israel or Judah betraying their covenant with God; Revelation reapplies the title to Rome.)

11:9. "Three and a half days" may be mentioned to signify that the dead bodies of the two witnesses were decomposing; it might also correspond to the three and a half years of their prophesying.

11:10. For "earth-dwellers" see comment on 3:10. The giving of gifts characterized some pagan celebrations and (probably not in view here) the Jewish Feast of Purim, which celebrated Israel's deliverance from Persian enemies (Esther 9:19, 22).

11:11. The breath of life entering the two corpses alludes to Genesis 2:7 and perhaps Ezekiel 37 (cf. Jn 20:22; *Testament of Abraham,* recension A).

11:12. Elijah ascended to heaven in a chariot of fire (2 Kings 2:11), and as time went on, Jewish tradition multiplied the number of holy servants of God taken directly to heaven without death. Greek traditions pictured a very small number of heroes taken to heaven in death. But ascension after *resurrection refers in other Christian texts to Jesus (Acts 1:9-11) and the church (1 Thess 4:15-16).

11:13. If "seven thousand" is understood as one-tenth of the population, the description fits Jerusalem better than Rome (the latter is estimated to have had a population as high as one million, though some think this inflated). (Some commentators see it as a specific reference to the remnant of Israel—1 Kings 19:18. Mercifully, here the surviving remnant is nine-tenths rather than one-tenth as in Is 6:13.) On a final earthquake, see Revelation 6:12.

11:14-19
The Final Trumpet and the World's End

11:14. See comment on 8:13; cf. 9:12.

11:15. The world system (in John's day, Rome) constituted a *kingdom, but it would be handed over to God's people (Dan 7:17-18). On the eternal reign of Israel's final king, cf. Isaiah 9:7, Daniel 7:13-14 and 1 Maccabees 2:57. Trumpets were always blown on the accession of an Israelite king (1 Kings 1:34).

11:16. See comment on 4:4 and 10.

11:17. Although Judaism acknowledged God's present rule over the earth, it also awaited and celebrated his future rule unchallenged over all humanity, and it usually acknowledged Israel's rule over the nations on his behalf. In Jewish sources, this rule would be inaugurated at the very end of the age.

11:18. The raging of the nations, God's wrath and the rule of Christ over the nations echoes Psalm 2. Judaism held that the righteous were rewarded at the end of the age (or at death). Destroyers of earth could evoke humanity's abuse of its stewardship over the earth (Gen 1:26). This idea was not unknown in John's day (e.g., **2 Baruch* 13:11, although the unrighteous use of creation there may refer specifically to idolatry); many Jewish writers also believed that humanity's sin had corrupted the whole creation (e.g., **4 Ezra*). Most relevantly, however, "destroying the earth" alludes to Babylon's conquests devastating the world (Jer 51:25).

11:19. The ark of the covenant (see comment on 23:17) was the piece of furniture in the tabernacle and temple that corresponded to a throne in ancient Near Eastern symbolism; the inclusion of the ark thus fits the dual image of heaven as a throne room and as God's temple. Jewish hearers of the book would also be aware that the covenant had been deposited in the ark and that the covenant was associated with stipulations and curses (plagues) against the disobedient. The Dead Sea Scrolls and many *apocalyptic writers felt that the old temple had been defiled, but that God would supply a renewed, pure temple at the end of the age; on the heavenly temple here, see 4:6. The ark was kept behind a curtain in the holy of holies in the *Old Testament, seen only by the *high priest one day a year; here it is exposed to open view. (One scholar has suggested that this verse evokes the image of the ark going forth to war, portrayed in terms Roman readers would readily catch: the numen of the state going

forth from the temple of Janus for war, thus the opening of heaven here.) On the lightnings and related phenomena, see comment on 4:5; this exodus language (Ex 19:16; cf. Ezek 1:4) suggests that John's revelation is understood as a revelation on the same level as Moses'.

12:1-6
The Dragon, the Woman and the Child

This vision reapplies imagery that was widely known in ancient mythology. A common Greek story, spread in several forms, presented Leto begetting the god Apollo while opposed by the dragon Python; Apollo then pursued the dragon Python and slew him. In an Egyptian story, the goddess Isis gave birth to the sun god Horus as the red dragon Typhon was pursuing her; Horus eventually killed Typhon. Some argue that people also applied such popular stories to the Roman emperor, whose rule is here linked with the evil dragon (in contrast with Roman tradition, which portrayed him in terms of the hero Apollo). Although these stories omit many details John includes from other sources (his whole account could be reproduced from the *Old Testament and Jewish sources), they indicate that all his readers could identify with a story line that modern readers often find impenetrable. But ancient readers familiar with the Bible would especially recognize here the story of Israel giving birth and *Satan's opposition to God's people.

12:1. Symbolic women occasionally appeared in *apocalyptic visions (e.g., **4 Ezra*). Ancient writers sometimes meant "signs" in heaven astrologically (consider Virgo, the virgin, and Draco, the dragon or serpent), but these signs were also fairly common as props in apocalyptic visions. The sun, moon and twelve stars help identify the woman as the twelve tribes of Israel (Gen 37:9). Judaism in this period (e.g., *Josephus, *Philo; later evident in *synagogue mosaics and the *rabbis) often associated the twelve signs of the zodiac with the twelve tribes, despite biblical prohibitions against astrological speculation; indeed, the romance novel **Joseph and Asenath* borrows twelve rays from typical Greek imagery for the sun god. But the Genesis reference itself is clear enough to show that the allusion is to Israel (cf. also Abraham and Sarah as sun and moon to Isaac in the *Testament of Abraham*).

The Old Testament portrayed faithful Israel (or Judah or Jerusalem) as a virgin or God's bride but their unfaithful equivalent as a prostitute; thus the tale of two cities that contrasts the heavenly Jerusalem (Rev 21:2) and Babylon the prostitute (17:5). (**2 Baruch* and *4 Ezra* also follow Old Testament models and contrast righteous Zion with its oppressor wicked Babylon.)

12:2. Righteous Israel was portrayed as the mother of the restored future remnant of Israel (Is 54:1; 66:7-10; Mic 5:3; cf. Is 7:14; 9:6; 26:18-19), an image freely mixed with the image of Israel as a bride (Is 62:5). The *Dead Sea Scrolls also spoke of the righteous remnant of Israel travailing to give birth (either to a saved Israel—cf. Rev 12:17—or to the *Messiah; the precise referent is disputed). Cf. John 16:21.

12:3. Ancient Mesopotamian myths portrayed seven-headed monsters; later Jewish tradition linked the worship of dragons to Babylon (Bel and the Dragon 23-27). The image of a seven-headed serpent or dragon was also part of Canaanite mythology that the Israelites symbolically turned to better purposes: God's parting the Red Sea was now symbolized as a defeat of the primeval serpent Leviathan or Lotan (Ps 74:13-15; cf. also Ps 89:9-10; Is 27:1; 30:7; 51:9; Job 9:13; 26:12-13; Ezek 29:3; for the principle, see Ex 12:12; Rahab in some of these texts had become a symbol for Egypt—Ps 87:4); this may be the most relevant background here. The Greek hero Heracles also confronted a seven-headed dragon, the Lernean hydra, in Greek mythology, although in that case the number of heads changed quickly! Serpents were also associated with Asclepius (relevant esp. in Pergamum); their association with Athena is less relevant in Asia Minor. Serpent veneration is common in many cultures and prevailed in a *Gnostic sect called the Ophites in the second century.

Jewish people had many stories about the great evil reptile Leviathan, that he would even be killed and served up as part of the course at the messianic banquet (cf. *2 Baruch* and later rabbis). Here the dragon is identified with the serpent of Genesis 3 and the devil (Rev 12:9).

12:4. The image of stars battling in heaven was used in the Old Testament (Judg 5:20, figurative language for the heavens pouring out rain against the enemy), the **Sibylline Oracles* (catching the world on fire) and some Greek sources. Old Testament texts and later Jewish texts portrayed both Israel or the godly (Dan 12:3; cf. 8:10) and angels (**1 Enoch;* probably also Is 24:21 and *2 Baruch*) as stars. Jewish traditions usually assigned the fall of angels to the period of Adam (refusal to worship God's image in Adam) or, more often, to Noah's time (sexual sins), but Revelation links their fall especially with rebellion against Christ.

12:5. Virgil and other Roman writers also extolled the birth of a divine boy who would bring deliverance to the world, glorifying the first emperor Augustus. If the emperor appears in Revelation, however, he is a puppet of the dragon, whereas Jesus is the divine leader of a group that may be marginalized or persecuted for rejecting the imperial cult.

In the various forms of the Greco-Roman and Near Eastern myth, the divine child was sheltered until he returned to slay the dragon. Here he is kept at God's throne until he comes to destroy the dragon. In the light of Psalm 2:6-9, Isaiah 9:6-7 and Micah 5:3, the "birth" probably indicates Jesus' death, *resurrection and messianic enthronement, not his literal birth (cf. Jn 16:21).

12:6. When God led his people from captivity, they wandered in the "wilderness" until their redemption was complete (i.e., until they possessed their inheritance in the Promised Land). As elsewhere in the *New Testament (see comment on Jn 1:23), the interim between Jesus' first coming and second coming is compared with Israel between Egypt and the Promised Land. The Jewish people were also expecting a new exodus of final deliverance in the wilderness (cf. Is 40:3; Hos 2:14-15).

More than 1,260 days had obviously already passed since Jesus' exaltation (see also comment on 11:2), but symbolic numbers were standard fare for apocalyptic texts. Although "1,260 days" surely alludes to the great tribulation of Daniel (cf. Dan 12:11; also 7:25; 9:27; 12:7), it is possible that Revelation reapplies it as a general symbol for final tribulation to the whole course of the present age. Daniel's own numbers were a reapplication of Jeremiah (Dan 9:2, 24), and some other apocalyptic writers also described other periods of tribulation figuratively. Such designations would characterize the kind, rather than the length, of time they described. This would fit the New Testament understanding that the "last days" involved the time between the Messiah's comings (see, in context, Acts 2:17; 1 Tim 4:1; 2 Tim 3:1; Heb 1:2; 2 Pet 3:3); Jesus coming twice required adjusting traditional Jewish expectations about the end.

(The language of older prophecies was commonly reused in Old Testament, later Jewish and Greek *prophecy; sometimes prophecies and other texts sought to evoke the same meaning as the earlier texts, and at other times they simply borrowed earlier language as standard prophetic imagery, without implying that they referred to the same meaning. As to what happened to the literal 1,260 days, Josephus and possibly the Gospels applied them to A.D. 66–70, the Maccabean literature applied them especially to the time of Antiochus Epiphanes, and many early Christians probably expected a literal period of that length to precede Christ's return, as became explicit in writings of some of the church fathers of subsequent centuries.)

12:7-17
This Means War

One may read the structure of the context as suggesting that the 1,260 days of 12:6 symbolically covers the whole period between the first and second comings. The period begins with Jesus' exaltation (12:1-6), the coming of salvation (12:10) and believers' justification (no longer prosecuted before God, 12:11). It spans the period of persecution of Christians (12:11-17), and, given the story line Revelation uses (familiar to the first readers), undoubtedly ends with Christ's return to slay the dragon (see comment on 12:1-6).

12:7-8. One of two angels mentioned by name in the *Old Testament, Michael was one of the chief heavenly princes, the guardian angel of Israel (Dan 10:13, 21; 12:1; in much ancient Jewish thought, each nation had its own angelic prince). In early Jewish literature and invocations, Michael was the chief prince of the heavenly host, God's main messenger (cf.

Jude 9); in the Dead Sea Scrolls, everyone was either in the camp of the Prince of Light or that of the Angel of Darkness. Common mythical language from Jewish stories about a primeval, heavenly battle leading to the fall of the evil prince and his angels is here transformed: the *ultimate* battle surrounded Jesus' death and exaltation (Jn 12:31; 16:11). Because Michael was sometimes presented as Israel's advocate before God, and Satan was generally presented as Israel's accuser (see 12:10), the image of war here may be one of judicial as well as of violent conflict.

12:9. The dragon is identified with the serpent of Genesis 3, who would be crushed by "the woman's seed" (Gen 3:15).

12:10. From his portrayal in the book of Job on, Satan is presented as an accuser of the righteous, a prosecuting attorney before God's court. In later texts, his role of tempter (gaining incriminating evidence) became more prominent, but he always retained his role as accuser; later rabbinic texts declared that he accused Israel day and night before God, except on the Day of Atonement. (They derived this idea fancifully: the number of Satan's name was 364, so he accused Israel 364 days per year.) This verse declares that Christ's finished work has ended Satan's power to accuse the righteous (cf. Rom 8:33-34).

12:11. The believers' legal "testimony" (offered in this world) counts more before the throne than Satan's accusations, and the object of their testimony is the finished work of *Christ on their behalf (1:2, 5, 9; 2:13). "Loving not one's life to the death" was the language of valor in battle (Judg 5:18), as was "overcoming"; they fought and won by faith to the point of martyrdom.

12:12. In many Jewish views of the end time, Satan/Belial would be unleashed against God's people in the final years (Dead Sea Scrolls). His authority was always delegated by God, permitted for only a particular length of time, to give him and his followers full opportunity to prove themselves wrong.

12:13-14. When God led his people forth from Egypt and into the wilderness, he "bore them on eagles' wings" (Ex 19:4; Deut 32:11), and other Old Testament texts speak of God sheltering his people beneath his wings (Ps 17:8; 36:7; 57:1; 61:4; 63:7; 91:4; cf. Jer 49:22); later Jewish texts speak of God's protecting his people, including converts to Judaism, under "the wings of his presence." "Time, times, and half a time" refer to three and a half years, as in Daniel (7:25; 12:7; cf. 4:32). The miraculous provision in the wilderness also recalls God's provision of manna for Israel of old there. The Old Testament prophets and Judaism looked forward to a new exodus like the first one in which God would ultimately deliver his people from all their oppressors; the early Christians applied this notion to their salvation by Christ's first coming and entrance into the future era of the *kingdom by his second (see comment on Rom 8:12-17).

12:15. In the most common form of the Greek story about Leto and Apollo (see introduction to 12:1-6), the sea god hid Leto beneath the sea till she could bear the child; in another version of the story, the dragon stirred the waters against her but the earth helped her by raising up the island of Delos. Revelation may reapply such images with new content. "Floods" are a typical image of judgment (e.g., Jer 47:2—war) and tribulation (Ps 32:6; 69:15) in the Old Testament, but God had promised safety for the people of the new exodus, just as he had brought Israel through the Red Sea (Is 43:2).

12:16. In Jewish tradition, creation, loyal to God, sometimes helped the righteous against their wicked human oppressors; thus, for example, a tree hid Isaiah from his pursuers, and the earth swallowed and so hid the vessels of the temple; in the Old Testament, cf. Genesis 4:10 and Numbers 16:31-32.

12:17. The woman's "seed" alludes to Genesis 3:15; the woman's seed would ultimately crush the serpent's head, but only after the serpent had bruised the seed's heel.

13:1-10
The Worshiped Beast

Whereas most of Revelation (including this passage; see Dan 7:3-8) draws on images from the *Old Testament, many scholars believe that this passage also plays on a theme prominent in the thought of John's contemporaries. Although Nero died, reportedly by his own hand, on June 9, A.D. 68, rumor circulated that he was still alive and ready to take vengeance on the Roman aristocracy for rejecting him.

According to writers of the day, the majority of people in the eastern part of the empire expected his return. Several impostors arose claiming to be Nero, hoping to gather followings in the eastern empire, where he was most popular; one of them arose in Asia Minor during the reign of Titus (Domitian's older brother). During Domitian's reign, a Nero figure even persuaded the Parthians to follow him to invade the Roman Empire, but Domitian forced them to back down and execute the impostor instead.

Jewish oracles predicted the return of Nero, and many Christians feared it. Although John clearly does not believe in a literal return of Nero, he may use the image of this popular myth, as many scholars think, to say: "You thought Nero was bad; wait till you see this!" (the way we today might use the image of Hitler, Stalin or Pol Pot). This image so shaped the views of early Christians—thousands of whose numbers had been eradicated under Nero in Rome—that "Nero" even reportedly became a term for "antichrist" in the Armenian language. Many later Christian writers, including Tertullian, Augustine and Jerome, connected Nero with the antichrist. The view that John here uses this Nero redivivus myth has continued through history and is widely held by modern scholars, such as F. F. Bruce, William Barclay and most commentators on Revelation. Politically dangerous oracles were known forms of Greek and Jewish protest, and Rome would have taken serious offense at the implications of this exiled prophet John had the authorities cared to take note of the symbolism of his book. See further comment on the number of the beast in 13:18 and the return of a king in 17:9-11. None of this means that Revelation or its early interpreters expected literal Nero to rise from the dead; emperors often claimed to be a second or new "Augustus" or some other emperor before them, and a new Nero need be no more literally the same person as his model than a new Moses or Elijah (Rev 11:5-6) or new Joshua or Zerubbabel (11:4) would need to be the same people as their models.

13:1. Rome came "from the sea" from the vantage point of the eastern empire, although the image itself is borrowed from Daniel 7:3. (**4 Ezra* 11:1 likewise has a symbol for Rome—an eagle with twelve wings and three heads—come from the sea, although in 13:1 a messianic figure does the same.)

Emperors bore titles such as "divine" ("god," on Asian coins) and "son of a god" (i.e., of the preceding ruler), and Domitian demanded the address "Lord and God," thus "blasphemous names" here (see comment on Rev 13:5-6 for Old Testament background). On seven-headed beasts, see comment on 12:3; on the heads, see comment on 17:9-10.

13:2. Daniel described four beasts, representing four successive empires (7:3-7); the fourth, probably the Greek empire of Alexander, was in John's day often interpreted to represent Rome instead. This passage uses components from several of Daniel's beasts (which were a winged lion, a bear, a winged leopard and a beast with iron teeth) to portray a composite of oppressive evil, evoking the worst feelings his hearers would have toward Rome and all oppressive political powers.

13:3. Much of the passage can be explained by the beast's imitating God as a false god, hence the pseudoresurrection here. But many commentators have also seen reference here to the myth that Nero, who apparently died in A.D. 68, was alive and would return (according to some forms of the story, Nero was dead but would return from the dead; see introduction to 13:1-10).

13:4. The praise here offered to the beast mimics a praise often offered to God (Ex 15:11; cf. Judith 6:2-3; Sirach 33:5, 10).

13:5-6. The proud mouth is the sort of imagery that later fed into the antichrist traditions (originally built around Antiochus Epiphanes and those after him who would be like him—Dan 7:8, 20, 25; 11:36; 1 Maccabees 1:24). On the forty-two months, see comment on Revelation 11:2-3; 12:6. The identifying of the tabernacle with the righteous heaven-dwellers matches the *Essene and early Christian picture of the righteous community as God's holy temple.

13:7. In Daniel 7:21-22, an antichristlike figure (applied first to Antiochus IV Epiphanes but necessarily reapplied to his successors in the role, with which history is replete) waged war against the *saints ("holy ones," God's people—7:18, 25; 8:24) and "overcame" them—until the day of judgment

and the *kingdom arrived. Nero burned Christians alive to light his imperial gardens at night, crucified others and fed still others to wild beasts; they were his political scapegoat for a fire in Rome for which he and his boyfriend Tigellinus were being blamed. Domitian does not seem to have instituted an empirewide policy of repressing Christians, but some later emperors did so. Daniel spoke of all peoples, nations and languages (also mentioned in Dan 4:1; 6:25), including under oppressive rulers and worshiping a false image (Dan 3:4, 7; 5:19); as in Revelation, the oppressive human multicultural empire contrasts with God's own multicultural kingdom (7:14). (Although Daniel's formula usually includes three elements, the *LXX includes four elements, as in Revelation, the first time the formula appears in Daniel at 3:4.)

13:8. Antiochus Epiphanes, one of the earliest candidates for an antichrist sort of figure (second century B.C.), had brought all the nations (in his part of the world) under his authority as one people (1 Maccabees 1:41-43) and demanded the worship normally considered due rulers in the East. The Romans had likewise united much of the ancient world, and most of the ruler-worshiping eastern empire now worshiped the emperor. "All the earth" was used in other texts of John's time to mean all the "civilized" earth, all that was under a mighty empire (e.g., Judith 2:7; 6:4; 11:1; although everyone was aware, from legend, mythology and trade connections, of peoples outside the sphere of Rome, Parthia and the northern barbarians). This verse indicates the Jewish doctrine of predestination, which many Jewish people held alongside the doctrine of free will (many of the early writers never saw enough tension between God's sovereignty and human responsibility to contrast them, although the idea of God's foreknowledge may have helped; see comment on Rom 9:19-21). On the "book of life" (cf. Dan 12:1), see comment on Philippians 4:3.

13:9. See comment on 2:7.

13:10. The language is from Jeremiah 15:2 and 43:11, where God promises to exterminate most of the Israelites by various means and to enslave the others in captivity; but the judgment here is against all nations who have rebelled against God. This judgment would encourage the martyred *saints concerning their vindication (Rev 14:11-12).

13:11-18
Enforcing Imperial Worship

Although most of the details of 13:1-10 could apply to the emperor of John's day, and via him to totalitarian regimes throughout history, some of the details of 13:11-18 could suggest that John consciously anticipates its ultimate fulfillment in an emperor yet to come (17:11).

13:11-12. Although the evidence is limited, some think that the beast "from the earth," as opposed to "from the sea" (13:1), represents the local provincial council who supervised the imperial cult in Asia, as opposed to the Roman administration. It was called the *commune Asiae,* headed by the Asiarchs from local towns (see comment on Acts 19:31). John may not imply any great difference between earth and sea (cf. Dan 7:3, 17). The "horned lamb" probably parodies *Christ (Rev 5:6); the two horns might reflect the power of ancient Persia in Daniel 8:6. Fire from heaven parodies and so apparently relativizes the miraculous power of God's witnesses (Rev 11:5), as Pharaoh's magicians tried to do with Moses' miracles as long as they could (Ex 7:11, 22; 8:7, 18; cf. 2 Kings 18:33-35).

13:13. Although the ancient Mediterranean world was full of self-proclaimed wonderworkers (some of whom were friends of emperors), and a few wonders had been attributed to Domitian's father (the emperor Vespasian), such wonders were not regularly associated with the imperial cult. Although some people did pray to Caesar for help (e.g., Lucius in Apuleilus's story of the ass and his transformation), most of the miracle reports are associated with temples like those of the healing deity Asclepius. (It is reported that some emperors in Roman history staged fake thunder or fire, but this was neither common nor central to the emperor's activity.) John apparently envisions a future blending of anti-Christian state religion and occult power, both of which existed mostly separately in his own day. His source for this view is undoubtedly Jesus (Mt 24:24; 2 Thess 2:9), and he has *Old Testament precedent for the occult powers in the service of an anti-God ruler repressing God's people (Ex 7:11, 22).

(As crosscultural studies of shamanism and spirit possession become more available, the once-popular tendency of commentators to rationalize away ancient reports of miracles, whether Christian or otherwise, will probably continue to diminish, although not all the reports, ancient or modern, are of equal value. Christianity has traditionally recognized the reality of other superhuman forces in the universe besides God—e.g., 1 Cor 10:20.)

13:14-15. Some magicians simulated the moving and speaking of idols (the skeptical *rhetorician *Lucian describes in detail the purported methods of a false prophet named Alexander). Hearing the extent to which the world can be deceived by false religion and state propaganda would evoke familiar discomfort in John's first Christian readers (cf. Deut 13:1-2). The demand to worship the image, which to the authorities symbolized appropriate loyalty to the state but to the Christians would symbolize apostasy, resembled the situation the Maccabean martyrs had faced (cf. 1 Maccabees 1:50-51) and especially the conflicts faced by Daniel's three friends (Dan 3:12-18; cf. 6:7).

13:16-17. A Greco-Egyptian king had similarly required Jews to be branded with the ivy leaf, the emblem of Dionysus (*3 Maccabees 2:28-29); this is likewise a mark of ownership, a brand or tattoo indicating to which god or empire one belongs. The term for "mark" is, among other things, the regular term for the imperial stamp on documents and of the image of his head on coins.

Like the other markings in Revelation, this one might be symbolic (see comment on 3:12; 7:3; cf. 14:1; 17:5; 19:12; 22:4); some Jewish texts speak of a symbolic mark of destruction on the forehead of the wicked (**Psalms of Solomon* 15:9) in contrast to the mark of the righteous (15:6). Some interpreters have nevertheless seen a tangible expression of allegiance to the world system; in at least the last two major imperial persecutions of Christians, both in the third century, certificates were issued to those who had fulfilled the mandated rite of emperor worship. But the text may simply imply a figurative slave brand identifying to whom a person belongs—God or the world. Participation in idolatry on at least some level appeared to be almost an economic necessity in many cities in Asia Minor (see comment on 2:18-29), and John warns that commercial discrimination would grow more severe, alongside the graver danger of martyrdom.

13:18. This verse is a typically cryptic *apocalyptic riddle (cf. Mt 24:15). Six hundred sixty-six is a doubly triangular number, which is very rare; though most ancient readers would not know that, some may have taken note of it, given *Pythagorean and other interest in special numbers. It has also been thought a parody on the divine number, seven, given Revelation's use of seven and given other demonic parodies of the divine in Revelation. Scholars more often turn to another explanation. "Counting a name" or word was an easy practice in Greek and Hebrew, which used letters as specific numbers (later Jewish teachers often played with the numerical values of words; this form of calculation was known as *gematria*). Many ingenious proposals have been made for the meaning of "666"; Irenaeus, a second-century Christian scholar, listed among the possibilities "Lateinos" (Rome as the final kingdom). Although the term may be transliterated into Hebrew letters more than one way, *therion,* "beast," can be spelled in Hebrew so as to come out to "666." This may be more than coincidence (though one might wonder why Revelation would treat the literal number of "beast" as a riddle). One might also transliterate *theriou,* "of the beast," as "616," a textual variant in Revelation 13:18. (The variant, however, loses the potential connection with the number seven or triangular numbers.)

But one of the most popular proposals among scholars is "Nero Caesar." Although his name comes out to 1,005 in Greek (which would have been obvious, because a familiar wordplay on that number of his name had circulated throughout the empire's graffiti), his name comes out to "666" if transliterated into Hebrew. If John intends an allusion to Nero here (see comment on 13:1-10), either he expects his readers to know to switch to Hebrew letters (probably with the help of more skilled members of the congregation), or he and they had already used "666" in this manner. Some ancient Christian sources do indeed suggest that this interpretation was already known. The other possible spelling comes out to 616—

which is a textual variant for Rev 13:18, as if *scribes knew the answer to the riddle but calculated the spelling differently. (This calculation requires using the Greek pronunciation Neron-Kaisar in Hebrew letters, with appropriate Hebrew numerical values: *N* = 50, *r* = 200, *n* = 6, *K* = 100, *s* = 60, *r* = 200. Hebrew used only consonants. The **Sibylline Oracles,* a Jewish document composed in Greek, does its *gematria* in Greek, not Hebrew; most of its readers would have been able to read only the former, being unable even to transliterate a name into proper Hebrew letters. Jewish scholars who used Hebrew incorporated many Greek loanwords, but John's readers would need either some help or prior knowledge to discern his point.) If this is the correct explanation, or part of it, it helps explain the image of the deceased ruler returning in 17:9-11.

14:1-5
Followers of the Lamb

14:1. "And I looked, and behold" indicates another vision (Ezek 10:1; 44:4; Dan 10:5). Mount Zion was the Temple Mount (sometimes loosely encompassing all Jerusalem), thus applied to the heavenly temple in the present (Rev 11:19) but pointing to the new Jerusalem of the future (21:2), a hope shared by nearly all ancient Jews, who longed for the restoration of their city and its sanctuary. Mount Zion thus figures prominently in *apocalyptic expectations (it appears by that title in **4 Ezra* and **2 Baruch*). Ancient *rhetoric often contrasted persons, but more relevantly here apocalyptic often contrasted the righteous and the wicked; the name on their foreheads contrasts with Revelation 13:16 (cf. 3:12; 7:3; 22:4). The association of the 144,000 with Zion here may represent their role as New Jerusalemites; on their possible identity, see comment on 7:4-8.

14:2. Ezekiel heard the sound of many waters in heaven (Ezek 1:24; 43:2; cf. Rev 1:15), and thunder was heard at Sinai (Ex 19:16; cf. Ezek 1:4, 13; Rev 4:5; 19:6). Ancient meteorology, as reflected in **1 Enoch,* placed waters (for rain) and thunders in the heavens. Harps had been used by priests and Levites in the worship of the earthly temple; it was natural to expect them in heaven's temple (Rev 5:8; 15:2).

14:3. Only these people could offer the song because it involved only them (5:9-10); on secret revelations in the heavens, see comment on 2 Corinthians 12:2-4. If Revelation portrays them as a spiritual army that has overcome (see comment on Rev 14:4), it may be relevant that warriors celebrated victory (see fuller comment at 15:3-4).

14:4. The Greek term translated "virgin" here is hardly ever applied to men in Greek literature (perhaps partly because men in ancient Greek culture rarely were), but it means never having had sex with someone of the opposite gender, and hence includes not being married. In a literal sense, this virginity was practiced most often among a Jewish group known as the *Essenes. But the image here may here allude symbolically to the purity of priests for the temple service (Lev 15:16-18) or to the purity required by the rules of a spiritual holy war (Deut 23:9-11; 1 Sam 21:5; 2 Sam 11:11; *Qumran War Scroll). The latter suggestion would fit the possible military census that some commentators find in Revelation 7:4-8. Given the link to Zion (14:1), their chastity may also be a male version of that of the image of the New Jerusalem as a bride in contrast to Babylon the prostitute. "Firstfruits" were the beginning of harvest, offered up to God; the term declares their holiness as sacrifices devoted to God (Ex 23:19; 34:26; Lev 2:12; 23:10; Num 28:26; Neh 10:35; Jer 2:3) or perhaps that others like them would come after them.

14:5. The promised end-time remnant would have no lie in their mouths (Zeph 3:13). Truthtelling was important in ancient ethics, although it could be suspended even in the Bible to save life (e.g., Ex 1:19-20; Jer 38:25-27).

14:6-13
Vindication of the Righteous

14:6-7. On "midheaven" see comment on 8:13. The angel's "good news" is the vindication of God's people by judgment on the wicked (14:7; cf. Nahum 1:15). Because the activity of angels in heaven often corresponds to what happens on earth, however (12:7), some commentators have suggested that this picture may refer to the final proclamation of the good news of the *kingdom (including both salvation and vindication/judgment) preceding the end (cf. Mt 24:14).

14:8. In a taunting mockery of a dirge, Isaiah 21:9 announces, "Fallen, fallen is

Babylon" (cf. Jer 51:8), referring to the historical Babylon that would later drag Judah off into captivity. But Jewish writers of John's day saw commonalities among all the empires that subjugated Israel, generally believing that Rome was the final such power (cf. Dan 2:35, 44). "Babylon" and its synonym, "the Chaldeans," were used as ciphers for Rome in Jewish texts such as the *Dead Sea Scrolls, *4 Ezra* and the later *rabbis (although the rabbis use "Edom" more frequently). The *Old Testament normally reserved the symbolic use of "prostitute" for the sins of God's people (with only two exceptions), but the allusion here is to Babylon in Jeremiah 51:7, who made all the nations drunk with its wine (i.e., Babylon was God's judgment on them).

14:9-10. In the Old Testament, God passed around a cup of intoxicating wrath to all the nations (cf. Ps 75:8; Is 51:17, 21-22; 63:6; Jer 25:15; 49:12; Ezek 23:31; Hab 2:16; Zech 12:2; also the Dead Sea Scrolls; for infidelity, cf. Num 5:24). Fire and brimstone were appropriate for a spiritual Sodom (Rev 11:8; Gen 19:24), although the image may be broader than that (e.g., Ezek 38:22). (This text need not imply that they cannot repent if they do so before death or the world's end—Rev 2:21; 11:10-13.) As often in apocalyptic literature, the wicked get to see what they missed (cf. also Ps 112:10); but Revelation omits a common apocalyptic feature, in which the righteous also get to see and gloat over the fate of the damned (e.g., *1 Enoch* 108:14-15).

14:11. The eternal smoking of Edom (night and day; contrast 4:8; 12:10) is described in similar terms in Isaiah 34:10, but there the meaning is desolation, whereas here it is eternal burning and torment. On the alternate views of judgment in ancient Judaism, of which the present view appears among the harshest, see comment on Matthew 3:12 or "*Gehenna" in the glossary.

14:12. Many comfortable people today (understandably influenced in part by historical misapplications of biblical ideals of mercy) dislike the idea of judgment. But salvation/deliverance in the Old Testament picture was not complete without vindication—removing the shame of the oppressed by punishing their unrepentant oppressors. The martyrs are here assured that they will be vindicated to the utmost (cf. 13:10).

14:13. Jewish texts spoke longingly of the day when the sufferings of the righteous would end. Greco-Roman letters of consolation stressed either that the dead were happy or that they were at least not sad, but Judaism especially stressed the peace of the righteous dead. The writer of *1 Enoch* noted that the wicked would have no rest (99:13-14; cf. Rev 14:11), but the righteous dead would have great rewards (*1 Enoch* 103:3), and the idea of rest for the righteous dead occurs throughout Jewish texts (Syriac Menander, Wisdom of Solomon). Jewish funerary inscriptions regularly mentioned peace for the dead; over half the Jewish epitaphs recovered in Rome included the words "in peace" (hence "rest in peace" is not only a modern concept). The image of reward for works is from the Old Testament and is common in Judaism and in the *New Testament (see comment on Rev 22:12).

14:14-20
Reaping the Earth

14:14-16. Commentators debate whether "one like a son of man" here refers to Jesus (1:13; Dan 7:13), or simply means that this figure appeared human, in contrast to some of the other angelic figures in the book (Rev 4:7; *Christ would not need to take orders—14:15-16). The harvest is also an image of judgment against Babylon in the *Old Testament (Jer 51:33); it is specifically appropriate for the final battle when blood would flow, as Joel 3:13 noted: "Put in the sickle, for the harvest is ripe. Come, tread, for the wine press is full" (NASB).

14:17-19. Because crushed grapes could look like human blood (Gen 49:11), this image, playing on Joel 3:13 (cf. also Jer 25:30), was powerful for ancients, who were more familiar with viticulture than most modern peoples are (contrast Christ and his people as a vine in Jn 15:1). This harvest image is particularly from Isaiah 63:1-6: God goes on to tread the winepress of his fury and tramples the nations, splattering his garments with their lifeblood. For angels over various elements of nature (including fire), see comment on Revelation 7:1.

14:20. Ancient reports of urban battles sometimes refer to streets flowing with blood due to the massive slaughter that occurred in a short span of time. For example, exaggerating the massacre at Bethar, the rabbis de-

clared that rivers of blood flowed from the city to the distant sea, rolling boulders from their place and submerging horses. Likewise, *1 Enoch* reported God judging people by letting them slay one another till blood flowed in streams (100:1-2), so that horses walked up to their chests in it and chariots were submerged (100:3); cf. similarly other oracles of the end time (**Sibylline Oracles,* several times).

The literal number here, "1,600 stadia" (NIV), which is about 200 miles (NASB, NRSV, GNT), is a square number (40 x 40), probably used roundly for a large quantity (although some also report that some ancients estimated the length of Palestine to about 1,600 stadia). The wine of God's wrath (14:10, 19) turns out to be human blood here, which is drunk in 16:6; other texts also speak of being drunk with blood (e.g., Judith 6:4).

15:1-4
Response of the Saints to Their Vindication

15:1. Ancient texts sometimes began and ended on the same point, thus bracketing it off (this design is called an *inclusio*). The heavenly perspective on the judgments on earth is bracketed by 15:1 and 8.

15:2. The *saints celebrate their vindication in 15:2-4. Jewish texts often spoke of rivers of fire proceeding from God's throne, based on Daniel 7:9-10; this image is mingled here with the imagery of the heavenly temple (on the "sea," see comment on Rev 4:6), in contrast to the lake of fire. Their triumph over their oppressor may also suggest another connotation of the "sea": like Israel delivered from the Egyptians, who were slain in the Red Sea, they offer God praise (15:3-4).

15:3-4. The "great and wonderful" (GNT) works refer to the plagues (15:1; cf. Ex 15:11). The "song of Moses" could refer to Deuteronomy 32 (especially to the part where God avenges the blood of his servants—32:34-43), which was used alongside psalms in Jewish worship. But in this context Moses' song almost surely refers to his song of triumph and praise after his people came safely across the sea, where their enemies were drowned (Ex 15:1-18). "Song of the lamb" recalls redemption from the final plague (Rev 5:6).

The language here recalls psalms, especially Psalm 86:9-10; the *Old Testament often proclaimed the hope of the remnant of the nations turning to God. "King of the ages" (the variant reading) or "of the world" was a common Jewish title for God. God would be universally and solely worshiped as king in the final day of judgment (cf. Zech 14:9).

15:5–16:1
Preparing the Final Plagues

15:5. On the heavenly tabernacle/temple, see comment on 4:6 and Hebrews 8:1-5.

15:6. Ancient Jewish literature often viewed angels as wearing white linen, but such texts also described priests in this manner, and John portrays these angels as servants of the heavenly temple.

15:7. The image of the golden bowls is probably derived from the use of such incense bowls in the temple before its destruction several decades before; cf. 5:8 and 8:3. On the cup of wrath, see comment on 14:9-10.

15:8. The temple filling with glory recalls the dedications of the earthly temple in earlier times (Ex 40:34-35; 1 Kings 8:10-11; cf. Ezek 10:3-4 for its withdrawal).

16:1. The *Old Testament commonly used the phrase "pour out wrath" (especially throughout Jeremiah and Ezekiel); the image of the cup may be related to this idea.

16:2-11
The First Four Bowls of Wrath

Like the trumpet plagues, the imagery for most of these judgments is especially borrowed from the judgments on Egypt in the Old Testament book of Exodus, reminding John's hearers that they, like Israel of old, were protected from these judgments that would eventuate in the capitulation of their oppressors and their own deliverance.

16:2. Sores were the sixth plague in Exodus 9:10.

16:3. This plague was the first in Exodus 7:20 (the second plague in the listing in Rev 8:8).

16:4. This judgment also extends the first plague (Ex 7:20; cf. comment on the third plague in Rev 8:10).

16:5. The oppressed often cried to God to vindicate them; and when vindicated, they praised God for his justice (often in psalms; the language was also used for his mercy, e.g.,

Tobit 3:2). In the *Old Testament God often let people destroy themselves (the wicked fell into their own trap), and sometimes punished them in ways obviously related to their crime (see comment on 16:6-7 below). Judaism developed this theme, emphasizing the appropriateness of particular punishments against the wicked. Jewish people believed that angels had charge over different elements of nature, including over the seas (see comment on Rev 7:1).

16:6-7. Early Jewish tradition declared that God turned the water of Egypt to blood to requite them for shedding the blood of Israel's children (Wisdom of Solomon 11:5-7). (On the wicked being "worthy" of punishment, compare Wisdom of Solomon 16:1, 9; 17:4; 19:4; cf. *Josephus, *Jewish War* 6.3.5, 216.) This observation develops a genuine theme in Exodus: in response to Pharaoh drowning Israel's babies in the Nile, God later turned the Nile to blood, struck Egypt's firstborn and drowned Pharaoh's army. The image of drinking blood was sometimes used metaphorically for shedding it, so the justice of the judgment would be apparent even to the few hearers unfamiliar with the exodus story (some recent *Gentile converts). The altar speaks up as a witness to the lives of the righteous sacrificed on it by martyrdom (see comment on 6:9).

16:8-9. The Old Testament mentions being stricken by heat as a common suffering of field laborers and wanderers in the desert (e.g., Ps 121:6; cf. Ex 13:21); although it is not one of the plagues on Egypt, it contrasts with the following plague of darkness. On unrepentance, see comment on 9:21; the purpose of judgments, up until final destruction, was to secure *repentance (Amos 4:6-11).

16:10-11. Darkness was the ninth plague (Ex 10:22; the fourth plague in Rev 8:12); the darkness in Egypt could be "felt" (Ex 10:21).

16:12-21
The Final Bowls of Wrath

16:12. Every informed reader in the Roman Empire, especially in places like Asia Minor and Syria-Palestine near the Parthian border, would understand the "kings of the East" as the Parthians; the river Euphrates was the boundary between the Roman and Parthian empires (although some border states like Armenia kept changing hands); cf. 9:14. Swollen, large rivers could delay the crossing of armies until bridges or rafts had been constructed, but God sees to it that this army will encounter no delays. (The same image of difficulty in crossing major rivers is implied in the new exodus of the Euphrates's parting in **4 Ezra* 13:43-47, but Revelation uses the image for an invading army [a natural usage], not for captivity and restoration.) Some streams dried up during some seasons in the Near East, but the Euphrates would not do so naturally; God, however, could dry up rivers in judgment (Nah 1:4).

16:13-14. The writer of **2 Baruch* mentions the release of *demons to wreak havoc in the final period before the end. Frogs were negative symbols (Ovid, *Apuleius, Artemidorus); one ancient writer (*Plutarch) even suggested tongue in cheek that Nero would be reincarnated as a frog. In this text the frogs may allude loosely to one plague on Egypt that John had not had room to include up to this point (second plague—Ex 8:5-7); here the dragon is compelled to act as God's agent in bringing judgment. In Jewish texts like the *Qumran War Scroll, the army of Belial (the devil), consisting of the nations and apostate Israel, would gather to be destroyed by God and his faithful remnant (cf. *4 Ezra*). Gathering the nations for judgment is the judgment language of the *Old Testament prophets (Joel 3:2, 11; Zeph 3:8; cf. Is 43:9), as is the "day of the Lord" (e.g., Amos 5:18-20).

16:15. Guards were to stay awake at their posts at night. It was common for people to sleep naked at night in the warm season, but most Jewish people would be horrified to be seen naked in public; perhaps the image is of a naked householder chasing a thief. The ultimate roots of the shameful nakedness image are from the Old Testament, perhaps for the shameful stripping of captive Babylon (Is 47:3), one drunk (Hab 2:16), or God's adulterous people (Hos 2:3; Ezek 16:37; cf. Rev 3:18); on the thief image, see comment on Revelation 3:3.

16:16. The Lord had promised to gather the nations (Joel 3:2, 11; Zeph 3:8; Zech 12:3; 14:2; cf. Is 13:4; Jer 50:29, against Babylon); Jewish tradition about the end time continued this image (**1 Enoch,* *Dead Sea

Scrolls). The nations and the dragon who led them might intend their gathering for other purposes, but God was gathering them to their own final destruction.

The Old Testament site of the future battle was the valley of Jehoshaphat (Joel 3:2, 12, 14), probably the strategic plain of Megiddo in the valley of Jezreel and Esdraelon. It was the corridor between the easily traveled coastal plain and the road to Damascus in Aram, and thus an essential crossing point for armies avoiding the difficult mountains (Judg 5:19; 6:33; 2 Chron 35:22; Zech 12:11; Pharaoh Thutmose III in 1483 B.C., etc.). Megiddo was a plain, not a mountain ("Har-Magedon," which the KJV read as "Armageddon," is literally "mountain of Megiddo"). Nevertheless, so transforming the site (for those who knew some Hebrew) would not be incongruent with John's *apocalyptic geography (13:1; 17:1, 3, 9). John's exact referent is debated, but a site related to the valley of Megiddo remains the most common view and some might recognize that this site would allow the armies of the East to engage Rome in Palestine.

16:17-18. This language suggests preparation for a theophany, a manifestation of God's glory, as at Sinai (cf. Ex 19:16; Rev 4:5); the powerful earthquake may suggest the end of the age (see 6:12; 11:13).

16:19. The oppressed would cry out to God to remember their oppressors' deeds against them (Ps 137:7). On the cup, see comment on Revelation 14:9-10.

16:20. This sort of language normally concerns the "end of the world" (see comment on 6:14)—vast, cosmic devastation.

16:21. This hail is much more severe than that in Exodus 9:24; it would crush everything in its path, leaving no survivors; this language too must be relegated to the end of the age. People's unrepentance indicated how much they deserved the judgment to begin with (Ex 7:22); see comment on Revelation 16:9.

17:1-5
A Vision of the Prostitute

Although the *Old Testament usually reserved figurative use of the designation "prostitute" for God's faithless people (e.g., Lev 17:7; Is 1:21; Jer 3:1-14; Ezek 16; 23; Hos 4:15), it was also appropriately applied to mighty mercantile or military centers. Thus Isaiah 23:16-18 portrayed Tyre as a prostitute who served all the kingdoms of the world; Nineveh as capital of a world empire also was called a harlot and sorceress, who sold nations (into slavery) by both devices (Nah 3:4). Allusions to both passages appear in Revelation 18–19. (Sorcery and prostitution are also linked in Is 57:3; cf. 2 Kings 9:22.) The false prophetess portrayed earlier in the book might appear as an agent of the system (Rev 2:20). See comment on 18:23.

Parallels and contrasts between Babylon the prostitute, in this passage, and the New Jerusalem the bride, in chapter 21, fit the practice in *apocalyptic literature (and other sources, such as wisdom literature) of contrasting the righteous and the wicked. One need not assume that John's prophecies of Babylon apply only to Rome; other evil empires have also come and gone. Because Rome was the Babylon of John's day, however, it supplies the images for John's original audience in the seven *churches.

17:1. Angelic guides were common in apocalypses, especially when the writer was given a tour of heaven or earth. Ancient art pictured cities as their patron goddess, often enthroned on the shore of a river; thus, for example, a coin from the reign of Domitian's father depicted the goddess Roma seated on seven hills. Rome, whose empire spread throughout the Mediterranean coasts, is naturally portrayed here as sitting on many waters (cf. Ps 65:7; Is 17:12-13).

17:2. Rulers of client states in Asia and Syria subservient to Rome were called "kings," even though they had to please Rome and cooperate with its agents; they also raised no objections to the imperial cult. Undoubtedly they did not think they were prostituting themselves, but any rare pockets of nationalistic resistance (such as in Judea, which was monotheistic besides) would have differed with their evaluation. For the nations' becoming drunk on Babylon's wine, see Jeremiah 51:7.

17:3. For being carried away in visions by the *Spirit, see Ezekiel 8:3; 11:1 and 24 (a "strong spirit" in **2 Baruch;* angels in **1 Enoch*). The wilderness was the place of another symbolic woman's new exodus (Rev 12:6, 14), although it was also associated with the demonic in some Jewish tradition; the point here may be that the woman who fancied herself seated on many

waters would actually be "desolate" (using a Greek word related to the word for "desert," i.e., barren like the wilderness—17:16). Some relate the beast (13:1) to the she-wolf of Roman legend associated with the goddess Roma (seated on seven hills) on some contemporary Roman coins (although John had ample Jewish precedent in representing kingdoms as beasts, e.g., Dan 8). The scarlet color of the beast is probably related to the blood of martyrs with which it was stained (Rev 17:6), or to the ostentation of the wealthy or of prostitutes (cf. 17:4; Jer 4:30). On the blasphemous names, see comment on 13:1 and 5-6.

17:4. True purple and scarlet required expensive dyes and were thus worn only by the wealthy, such as queens (18:7), or by well-to-do prostitutes, who used purple attire to attract attention. Many ancient moralists reviled the ostentation of wealthy women, but John also intends a contrast between the earthly splendor of Rome, renowned throughout its provinces, and the true splendor of the heavenly woman (12:1; 21:9-14) and heaven's court (4:3-11; comparison of characters was a major feature of ancient speech and writing).

17:5. As "mother" (cf. 2:23) of "prostitutes" and "abominations" (perhaps idolatries), "Babylon" is pictured as the most terrible of them all. (In the East, where married women generally covered their hair, a "prostitute's forehead" [Jer 3:3; cf. Hos 2:2] might seem an obvious image in this period; of course, most persons in Revelation are identified by their forehead or hand anyway [e.g., Rev 7:3; 13:16]. Older Greek literature reports the slander that Babylonian women were all required to play the prostitute once in life, but it is doubtful that this association was popular in the *New Testament period; the imagery comes instead from the Old Testament.)

17:6-18
The Meaning of the Prostitute

17:6. Given the ancient horror of cannibalism, the image of "drunk with blood" is a terrifying one. Although the verse refers to Christians martyred under Rome in general, Rome's thirst for blood may have brought a special image to many minds. Rome's officials kept the multitudes happy with free grain and public amusements, the latter including especially bloodshed in the arena. Criminals and slaves were special candidates for satiating the public appetite for violent entertainment; once Christians were considered criminals (in the first century, especially clear under Nero), their large numbers would supply an inordinate proportion of victims. See comment on 16:6.

17:7-8. Again using the ancient *rhetorical technique of comparison, Revelation pictures the beast who "was and is not and is to come"—a parody on the eternality of God (1:4). apocalyptic texts often specialized in explaining cryptic revelations, frequently with the aid of an angel. On seven heads and ten horns, see comment on 12:3; 13:1; as it was widely recognized that children often looked like their parents, the beast bears a striking resemblance to the dragon.

17:9. It was common knowledge that the original city of Rome sat on seven hills; this datum appears throughout Roman literature and on Roman coins and was celebrated in the name of the annual Roman festival called Septimontium. Here the hills have become mountains in characteristic apocalyptic *hyperbole. (The seven mountains of paradise in *1 Enoch* 24:2 and 32:1 are probably unrelated, unless by way of radical contrast. But the **Sibylline Oracles* also prophesied judgment against "seven-hilled Rome"—2:18; 11:109-16.)

Various features identify Rome as the Babylon of John's day:

1. It sits on seven hills.
2. In John's part of the world, it was the "city that reigns over the kings of the earth" (17:18).
3. Like Babylon it had conquered God's people and destroyed Jerusalem.
4. Because it had conquered God's people and destroyed Jerusalem, some other Jewish interpreters portrayed Rome as a new Babylon, and it had long been viewed as successor of other evil empires including Babylon.
5. It was a mercantile empire that sat on waters and is known to have traded in precisely the kinds of merchandise listed in 18:12-13.
6. The suggested new Nero imagery (13:1-2, 18; 17:9-11) fits Rome.

Like many Jewish interpreters of his day who construed Old Testament language in multiple ways, John here allows his symbolism to stand for more than one referent (see Rev 17:10-11).

17:10-11. Some commentators count the kings starting from the first emperor (Augustus) but use up the seven before reaching the current emperor, Domitian, although the text itself claims that one of the seven was then reigning (v. 10). An allusion to the legendary kings who preceded the Roman Republic fails because obviously none of them is still living, either.

The real clue is that one king was then reigning, and one of the seven would return. Whether an author writing in the reign of the Flavian king Domitian would count the three brief usurpers between Nero and Vespasian as "kings" is doubtful; hence Nero, probably viewed as less than seven kings before Domitian, would appear as one of the seven. Interestingly, Nero was also expected to return (see comment on 13:1-10).

17:12. Ten horns represented ten kings in Daniel 7:24, possibly successors of Alexander the Great's Greco-Macedonian kingdom; most Jewish people in the Roman era, however, read Daniel's fourth kingdom as Rome. They might thus apply the description to Rome's client states in the East (cf. Rev 17:2).

17:13. The kings' unified conspiracy against God would come to nothing; this conviction had long been part of Jewish hope (cf. Ps 2:2; 83:5).

17:14. "King of kings" had long been applied to supreme rulers of the East (Ezra 7:12; Ezek 26:7; Dan 2:37; cf. 2:47) and was now used as the title of the Parthian king, Rome's most feared earthly nemesis. More significantly, Jewish people regularly applied these titles to God (from Deut 10:17; Dan 2:47). This true ruler over the earth's kings (cf. 1:5) contrasts with Rome's control of mere client kingdoms (17:2).

17:15-16. The Roman Empire and its allies would eventually turn on Rome itself—a threat concerning the self-destructiveness and lack of faithfulness of those who pursue evil. The image is from the Old Testament (Jer 4:30; Lam 1:2; Ezek 23:9). The burning derives from Daniel 7:11. Although fire was the standard method for destroying captured cities in antiquity (Amos 1:4), some knowledgeable readers might have remembered the rumor that Nero burned down Rome in A.D. 64 and blamed it on the Christians: Rome thus ought to be wiser than to embrace one who might be like a new Nero. (The proposed allusion to burning for sexual immorality in Lev 21:9 is less likely; cf. Deut 22:21.)

17:17. Jewish people recognized that the present world was dominated by evil powers but viewed those powers only as angels with limited authority; they recognized that God rules the ages. They also realized that, as in the Old Testament, God raises up one nation to judge another, but his purposes are far different from the purposes of the finite nations themselves (e.g., Jer 51:11, 29; 52:3; Joel 2:11).

17:18. In John's day, no one in the Roman Empire could have doubted that the city that "reigns over kings" meant Rome, any more than anyone would have doubted that the seven hills (17:9) alluded to Rome.

18:1-24
A Dirge over Babylon

Ancients often contrasted weddings (see 19:7-9) with funerals. In contrast to the praises in 19:1-7, Revelation 18:2-3, 10-19 contains funeral dirges over Babylon, following *Old Testament models; prophets sometimes ironically mourned a city's destruction, thereby prophesying its ruin. (More generally, laments over fallen cities were an ancient literary form.) It is difficult for us to catch the impact today: a condemned and probably aged prophet, confined to an island for defying the whims of the mightiest empire the Mediterranean or Middle Eastern world had ever known, prophesied that empire's destruction. Yet the faith he proclaimed has spread throughout the world, and Rome has now been fallen for more than fifteen centuries. Although "Babylon" stood for Rome in John's day, other embodiments of the oppressive world system have risen and fallen since then.

Ancient *rhetoricians and writers often showed off their epideictic (praise) rhetorical skills by praising important cities, as in Aelius Aristides's lavish flattery of Rome. In contrast to such praises, John describes the city's power and wealth to condemn it, as the Old Tes-

tament prophets did with arrogant empires, and to produce a funeral eulogy that curses instead of blesses. Oracles of woe against the nations were common in the Old Testament and continued in some Jewish literature of John's day (particularly *Sibylline Oracles*). Dominant biblical allusions in this passage include not only Old Testament references to Babylon but also to Tyre, a prosperous and boastful mercantile center, in Ezekiel 26–28.

18:1. Powerful angels were frequently described as shining like lightning or the sun (Dan 10:6 and often in later Jewish texts).

18:2. Old Testament prophets often pronounced an event as done even though it had yet to be fulfilled in practice. John takes this taunt-lamentation against Babylon directly from the Old Testament (Is 21:9; cf. Jer 51:8), as well as the description of a barren land possessed only by desert creatures (Is 34:9-15; cf. Jer 50:13; 51:29, 37; other cities—Jer 9:11; 49:33; cf. Baruch 4:33-35). (The mention of "*demons" also appears in the *LXX of Is 34:14.) Although Rome's population was probably close to a million in John's day, five centuries later it may have been as low as thirty thousand.

18:3. Cf. Jer 51:7. Later Jewish resistance oracles (some *Sibylline Oracles*) likewise portrayed Rome as lying with many suitors but headed for judgment. On the nations drinking from her cup, see comment on 14:8.

18:4. In pronouncing judgment on Babylon, Jeremiah warned his people—who were supposed to be at home there in the short term (29:4-10)—to flee from the city's midst, because God would destroy it (51:6, 45; cf. Zech 2:7); even the presence of some of the righteous would not stay the judgment (cf. Gen 19:17). (In the *Dead Sea Scrolls, the righteous were to "separate" themselves from the "children of the pit"; in one *Essene commentary on Nahum, when the iniquity of those who were leading people astray was exposed, the righteous of Ephraim would flee from among them, joining the forces of the true Israel. But *Qumran separatism, unlike early Christian separatism, was geographic.) Getting out of an imminently doomed city was common sense for anyone who believed the *prophecy (cf. Tobit 14:8; Ex 9:20-21); John's largest concern, however, may be worldliness: how much of the spirit of Babylon was inside the *churches (especially in Sardis, Laodicea and the like).

18:5. Jewish people recognized in the Old Testament (e.g., Gen 15:16; 2 Kings 22:20) that if God's full judgment was delayed, it meant only that he was storing up retribution for the sins of many generations to pour them out on an even more wicked generation (also Mt 23:34-36). "High as heaven" may be an idiom (1 Sam 5:12) but certainly implies that God would take notice (cf. Gen 18:21).

18:6. Paying retribution to the wicked according to their mistreatment of others was a fairly common theme in the Old Testament (Neh 4:4; Esther 9:25; Ps 7:15-16; 35:8; 57:6; Prov 26:27; 28:10; Dan 6:24; Jer 50:15, 29—Babylon; Obad 15). Paying someone back "double" indicated that the retribution would be more than complete (Is 40:2); it was also the punishment expected for a thief (Ex 22:4, 7, 9). For the cup with the wine of judgment, cf. Jeremiah 51:7, Psalm 75:8, Isaiah 51:22-23 and other references in comment on Revelation 14:9-10.

18:7. For John, the "queen" might evoke Jezebel (Rev 2:20), but a clearer connection with the Old Testament here is the quotation from Isaiah. Here John cites Isaiah 47:8-9 (also used by the *Sibylline Oracles*), condemning Babylon's arrogance and smug security that it would never fall (cf. also, e.g., Is 32:9; Jer 48:11; 49:31; Ezek 16:49; Amos 6:1; Obad 3). Rome claimed to be the "eternal city" and certainly glorified itself; it allowed subject peoples to worship the goddess Roma, who personified Rome. Rome's luxury (including grain subsidies to keep the local masses happy) came at the expense of other nations, such as the heavily taxed peasants of Egypt. The thoughtless extravagance of the Roman elite invited God's wrath; cf. Amos 4:1-2.

18:8. Beset by problems ignored by its king Nabonidus, ancient Babylon had fallen without battle to its conquerors in a single night, as Jewish people well knew (Dan 5:30). But this new "Babylon," the new site of the oppression of God's people, would be judged with fire (see comment on Rev 17:16). The image of Rome's destruction by fire would be vivid to anyone who knew of the city's burning a generation before, in A.D. 64. In the context of one of the dominant quotations in this context, the God who would vindicate his

people and judge Babylon was "strong" (Jer 50:34; cf. 32:18; Deut 10:17; Neh 9:32).

18:9-10. Although the imagery is not totally consistent here (cf. 17:16; but *apocalyptic imagery did not have to be consistent), genuine mourning might be natural: client kings were normally appointed only with the favor of Rome, and Rome's fall would grant freedom and prestige to political competitors.

18:11. The fleet of merchant ships bringing grain to Rome, by which the fertile soil around the Nile fed the masses of Italy, represented the largest form of transport until modern times. Revelation especially addresses the luxury trade (18:12-16), focusing on nonessential items secured for those who could afford them. Rome's port of Ostia, constructed roughly half a century earlier, had a square with many offices for the merchants overseeing its international trade. With Rome destroyed, wealthy shippers would become no better off than the empire's peasants—whose situation in some regions might improve without heavy Roman taxation. The image of merchants mourning over a great trade center is from descriptions of Tyre in Isaiah 23:1-8 and especially Ezekiel 27, a passage that describes in more detail the city's greatness.

18:12-13. Most of Rome's gold and silver came from mines in Spain, many of them confiscated from their owners; slaves who worked these mines had brief life expectancies. Rome imported precious stones (for use by wealthy men but especially their wives) especially from India. Romans procured pearls (perhaps Rome's heaviest trade with the East) from the Red Sea and Persian Gulf, but particularly from India, where divers risked their lives to secure them. Spain, Asia Minor and especially Egypt supplied most of the fine linen (becoming more prominent than wool by this period). Rome procured the costly purple dye mainly from Phoenicia, and red especially from the kermes oak of Asia Minor. Although some silk was grown on the Aegean island of Cos, Rome imported most silk from China; some Romans thought it grew on trees. This special kind of scented wood ("citron wood"—NIV, NASB) had long been imported from western North Africa as far east as Cyrene, but having depleted most of those forests Rome now imported most of it from Morocco; one table made from this wood was so expensive that one could have bought a large estate with the price. Romans imported marble, especially used for palaces, from North Africa, including Egypt, and Greece. Cinnamon, including both the plant's wood and, more expensively, the spice made from its shoots and bark, came from Somalia; trading ships with East Africa made a two-year round-trip voyage, traveling as far south as Tanzania. Wealthy Romans used incense to perfume their homes (and in religious rituals), and imported most of the aromatic merchandise specified here. One spice here comes from south India; myrrh, from Yemen and Somalia; frankincense, from southern Arabia.

Although not a luxury item, the amount of wheat imported to support the Roman populace (an estimated four hundred thousand tons of grain each year) also suggests exploitation; two hundred thousand families in Rome ate free imported grain while many children in Egypt, one of the empire's most fertile regions, starved. The empire's economy positively generated wealth, but it was inequitably distributed to the advantage of those who held power. In contrast to wheat more generally, "fine flour" was a luxury good imported in largest quantities from Africa. Beef was rarely eaten even by the wealthy, and people rarely ate mutton; Italy used cattle as work animals, and sheep for wool. Italy imported horses primarily for chariot races, used for public entertainment, and to draw the carriages of the very few people who were rich.

The list climaxes with the worst forms of exploitation: slaves ultimately from subjugated peoples but in more recent times mainly from breeding slaves, and sometimes discarded babies raised as slaves. "Human lives" (NASB, NRSV, GNT) comes from Ezekiel 27:13, where it refers to Tyre's wicked trade in slaves (Scripture treated this trade as a capital offense; this was the usual meaning of "kidnapping," a capital offense in Deut 24:7). If distinguished at all from "slaves," it probably refers to people reserved for gladiatorial shows and other forms of death to entertain the public; criminals, prisoners of war, the lowest of slaves and Christians were commonly used in such shows.

John may model his list after Ezekiel 27:2-24, but he condenses and updates it to apply to Rome. One first-century source (Pliny

the Elder) offers a list of Roman imports that contains items very similar to the present list. A second-century writer estimated Rome's imports just from China, India and Arabia at roughly thirty million denarii (a denarius was a day's wage in Palestine). Rome was a center of international trade, and no merchant marine existed like Rome's for a thousand years after its demise.

18:14-15. For "fear" at its fall, cf. the reaction predicted for Tyre's fall in Ezekiel 26:17-18; the merchants' investments are lost.

18:16. On the adornments, cf. 17:4; these represent Rome's extravagance and wealth. Those who had never been to Rome often had an exaggerated opinion of its greatness (some later Mesopotamian *rabbis spoke of 365 sections of Rome, each with 365 palaces, each with 365 stories!). But it was the most powerful city that the ancient Mediterranean had ever known and that most of the world would know for many centuries after it. No one in the provinces could describe the judgment on Rome and not think of the destruction of great wealth (e.g., also the *Sibylline Oracles*).

18:17-19. Throwing dust on one's head was a familiar way of mourning. The merchants themselves had good reason to mourn—they were now out of business, perhaps with outstanding debts on their expensive cargoes that would lead to the loss of everything they had.

18:20. Writers sometimes bracketed a section with a key phrase; 18:20, 24 address vengeance for the blood of God's people. Judgment of the wicked is vindication of the righteous; cf. 6:9-11. The Greek phrase (literally "God has judged your judgment from her") may mean that God convicted Rome by applying to that city the judgment of its own law courts against the Christians. When Rome was later sacked by the barbarians of northern Europe after its acceptance of Christendom, the North African theologian Augustine explained that the judgment was due to Rome's past sins (cf. 18:5) and a church too weak to avert judgment in its own time (cf. 18:4).

18:21. In Jeremiah 51:63-64, the prophet is commanded to hurl a stone into the Euphrates and declare that Babylon would likewise sink, never to rise again. Rome sometimes used drowning as a punishment, recognizing that it was a horrible fate. Here the stone is the kind of millstone turned by a donkey, so heavy that it could never be retrieved from the sea, and probably alluding to Jesus' earlier warning (Mk 9:42).

18:22. The ghastly silence of Babylon here means complete devastation, as it meant in Isaiah 13:20-22: the city is without inhabitants.

18:23. The "voice of the bridegroom and bride" was the ultimate sound of joy; the prophets used the image of its stifling for terrible destruction (Jer 16:9; 25:10; Joel 1:8). Babylon, who would be left a widow (Rev 18:7, following Is 47:8), was a sorceress (Is 47:9) like Nineveh of old, a prostitute who enslaved nations (Nah 3:4, which supplies much of the wording here); the "sorceries" (KJV) here may refer to love potions or to the occult rites of their pagan priests. (Jezebel is associated with both sorcery and spiritual prostitution in 2 Kings 9:22.)

18:24. God dealt vengeance against those stained with the blood of the innocent (Jer 2:34). Although it is not technically true that all the righteous were killed in Rome (cf. Mt 23:35), Rome assumed responsibility for their slaughter as the present embodiment of the oppressive empire, a trait of corporate human sin that recurs throughout history.

19:1-10
Praise over Babylon's Fall

The scene shifts immediately from mourning on earth to rejoicing in heaven (cf. 18:20); the martyrs have been vindicated at last. Although the reference is particularly to Rome, it may look beyond Rome to the oppressive elements of the world system that carry on Rome's role until the return of Christ.

19:1. "Hallelujah" (19:1, 3, 4, 6) is frequent in the Hebrew (and often the Greek) form of the Psalms (cf. Ps 146–50), and is a strong command to praise the Lord (a *piel*—it is the strongest possible command, probably originally uttered by the inspired Levite musicians summoning their hearers to worship). It was appropriate in all worship, especially in praising God for his magnificent acts (e.g., after deliverance—*3 Maccabees 7:13, or in end-time Jerusalem—Tobit 13:18). It functioned as a call to worship in the temple, and so functions in the heavenly courts of worship (Rev 19:1, 3, 6; cf. v. 5).

19:2. Vindication for the righteous included just punishments against their killers; see Deuteronomy 32:43; cf. Psalm 79:10 and Jeremiah 51:48-49 (on Babylon).

19:3. This quotation is from the description of the fall of Edom's leading city in Isaiah 34:10 but naturally applied to all cities that practiced the same wickedness, including the world system (cf. 66:24). (The application from city to society or world would have been as natural in the first century as application from one city to another; philosophers often viewed the whole state as a macrocity.) This language of smoking ruins was natural war imagery, and as an eternal devastation it is also repeated in the **Sibylline Oracles*.

19:4. The *Old Testament pictures God enthroned both in heaven and above the cherubim on the ark in his temple; given the derivation of the four living creatures from Isaiah 6 and Ezekiel 1, the image may again be one of a heavenly temple as well as of a throne room.

19:5-6. For the "sound of waters" see comment on 1:15. Music and celebration were crucial at a wedding. God was often called "Almighty," and the Old Testament frequently celebrates his reign, especially with regard to his rule over creation (Ps 97:1), great deliverances (Ex 15:18) and the end time (Is 24:23; 52:7; Mic 4:7).

19:7. In Isaiah 25:6-7 God announces a great banquet for all peoples (cf. Rev 19:7), and in Isaiah 25:8 the promise of deliverance from death. In Isaiah 25:9 God's people celebrate their salvation, declaring, "Let us rejoice and be glad" in the salvation God had enacted on their behalf (slightly different in the *LXX). The Old Testament and later Jewish literature often compared Israel to a bride wedded to God; cf. Revelation 21:2. The messianic age or world to come was also often portrayed as a banquet.

19:8. Pure linen was mandatory apparel for the *high priest entering the holy of holies (Lev 16:4), extended in time to all ministers in the sanctuary; angels were often supposed to be dressed in linen too (probably based on Dan 12:6-7). Its symbolic use for purity and (here) righteous deeds would thus be natural. In Revelation it partcularly contrasts with the prostitute's fine linen (18:12, 16).

19:9. The banquet here is from Isaiah 25:6, and the image of end-time reward was often developed in Jewish tradition (see comment on Rev 19:7). Revelation contrasts this marriage supper with a terrible feast in 19:17-18.

19:10. Revelation elsewhere might encourage the view that Christians on earth worship with the angels, in communion with the worship of heaven (a common Jewish view); but the book simultaneously rejects the views of those who prayed to and praised angels (amulets and incantations attest that some Jews invoked angels). Most of early Judaism associated the *Spirit of God with the spirit of *prophecy; for John, witnesses of Jesus dependent on the Spirit (thus, ideally, all Christians) were prophets in the broadest sense of the term. It was, in fact, the proper witness to Jesus that distinguished true prophets from false ones (1 Jn 4:1-6), an important issue among some of the book's hearers (Rev 2:20).

19:11-16
The Final Invasion

This section is the ultimate climax of the book, for which readers have waited since 1:7. All the previous armies and other judgments were mere preludes to the coming of the final King of kings on a white horse.

19:11. Roman princes customarily rode white horses in military triumphs; the emperor Domitian had himself ridden one behind his father and brother in their Judean triumph after the Jewish war of 66–70. But the image of Jesus returning on a white horse, conjoined with the title "King of kings" (19:16), may mean that Jesus is portrayed like the *Parthian* king (cf. comment on 6:2; 17:14), his whole army coming on white horses (19:14). That is, Revelation again employs the most feared imagery of the day to communicate its point. The pretentious claims of the emperor and all who were like him would be nothing before the true divine king from heaven.

The image may allude to God going forth as a warrior on behalf of his people (e.g., Is 31:4; 42:13; 59:16-18; Hab 3:11-13; Zech 14:3; cf. Ex 15:3). This is the ultimate "holy war," anticipated in the *Old Testament, in the *Dead Sea Scrolls, by the *Zealots and by many other Jewish people, although not all these sources expected the deliverance and armies to come directly from heaven.

19:12. On "eyes like a fiery flame," see comment on 1:14 (Dan 10:6); diadems (in contrast to many *New Testament references to "crowns," most of which refer to victors' garlands) were for rulers. That his name is unknown might be meant to imply that no one has power over him (ancient magicians claimed that they could coerce spirits once they knew their names); compare Revelation 2:17.

19:13. The garments of God were stained with the blood of the winepress in Isaiah 63:2-3, when God was avenging his servants by judgment (cf. Rev 14:17-20); a later Jewish tradition naturally connects this text with the idea of Genesis 49:10-11, reading the latter as proclaiming that the warrior *Messiah will be stained with blood. Compare Wisdom of Solomon 18:15-16, where God's slaying the firstborn of Egypt is figuratively described as his Word leaping out of heaven like a mighty warrior; his commandment goes forth as a sharp sword (cf. Rev 19:15).

19:14. The armies of heaven were sometimes revealed in the Old Testament (2 Kings 2:11; 6:17; Is 66:15; Hab 3:8; cf. Ps 68:17; Jer 4:13), although God's "hosts" were usually pictured on chariots there, whereas here they ride horses—the customary means of attack for the Parthians. In each case the portrayal matches the most devastating sort of aggressors known in the writer's time. White horses were often considered superior and associated with royalty, and were connected with the Parthians more than with other peoples. Most Palestinian Jews believed that Israel would participate in the final battle (Dead Sea Scrolls; cf. Ps 149:6-9), but some also envisioned the angelic host as warriors on horseback (e.g., 2 Maccabees, *4 Maccabees). The coming host could involve angels (Zech 14:5) but here include believers (17:14), who have already "overcome" through martyrdom and other tests.

19:15. The words of God's mouth could be described as a sword (Hos 6:5; cf. **Similitudes of Enoch*) and the Messiah's decrees as a rod (Is 11:4); the mouth of Isaiah's servant also resembles a sharp sword (Is 49:2). (The writer of **4 Ezra* 13 also describes a fire going forth from the Messiah to devour the wicked; the fire is said to represent the *law of God. In **Psalms of Solomon* 17:24 and 35-36, the Messiah smites the nations of the earth with the word of his mouth.) God's sword is also described as his instrument of judgment (Is 34:5; Jer 12:12; 47:6), especially in the end (Is 66:15-16). The sword was a Roman symbol of an authority's right over life and death (capital punishment) but appears throughout the Old Testament prophets as an image for judgment by war. Ruling with an iron rod alludes to royal authority in Psalm 2:9 (cf. *Psalms of Solomon* 17:26-27).

19:16. In Roman antiquity, horses and statues were sometimes branded on the thigh, but people were not (cf. Ex 28:36-38). This is a symbolic depiction; everyone in Revelation is identified by a name on his or her person (e.g., 7:3; 13:16). "King of kings" was the title of the king of Parthia but had been applied in Jewish tradition long before that Parthian usage to God himself, the suzerain King who rules over all the kings of the earth (see comment on 17:14; cf. Deut 10:17; Dan 2:47; Zech 14:9).

19:17-21
The Defeat of the Wicked

19:17-18. The *saints have one feast (19:7-9), the birds of the air another (19:17-18). Revelation takes the image and language here from Ezekiel 39:17-20 (esp. 39:17; cf. Is 49:26; Zeph 1:7), which in context occurs after the final battle with Gog (cf. Rev 20:8). Everyone understood that if the corpses of those killed in battle were not buried they would be eaten by vultures, dogs and other animals (1 Sam 17:44-46; Jer 16:4; Ezek 29:5; throughout Greek and Roman literature). The description of such ultimate destruction of their mighty oppressors (cf. also *Sibylline Oracles*) may have been a powerful encouragement to persecuted ancient Christians hearing the book.

19:19. In this depiction of the end, it is the armies, rather than the entire populations of the nations themselves, who are destroyed at this point (cf. 20:8); different Jewish views on the exact character of the final war tried to reconcile different *Old Testament images of the end.

19:20-21. Some of these details (judgment by fire, the defeat of *Satan and his forces, with special attention to the evil leaders) are standard in accounts of the end time; others are unique to John's story line (the evil emperor and his sorcerer/propaganda minister

being thrown into the furnace alive). Cf. Isaiah 30:33 and Daniel 7:11. Brimstone may allude to Sodom, though the destruction here is perpetual (cf. 20:10). Some Jewish texts spoke of fiery *Gehenna (sometimes drawing on Greek images of torment in Tartarus) and of rivers of fire flowing from God's throne (cf. Greek pictures of a fiery river in the afterlife, but esp. Dan 7:10); Revelation contrasts a lake of fire for the wicked with a heavenly sea of glass mingled with fire (15:2).

20:1-6
The Thousand-Year Kingdom

Many Jewish texts pictured an intermediate kingdom between the present and future eternal reign (cf. **4 Ezra* 7:28-30; **2 Baruch* 29:3; 30:1-5; 40:3). Whether this suggests that the period is literal or figurative in Revelation—and if figurative, figurative for what—has been debated since the first few centuries of *church history. "Amillennialists" like Augustine, Calvin and Luther usually have taken it as symbolic for the present age, whereas "premillennialists" like Irenaeus, *Justin Martyr and Isaac Newton have read the period as future and after Christ's return; "postmillennialists" like George Whitefield, Jonathan Edwards and Charles Finney have predicted a future millennial period preceding Jesus' return (this last view is generally rare today). Those who take Revelation's millennium as in some sense future generally regard it as qualifying the absolute imminence of the final end, which might otherwise be supposed from 1:3. Many read the structure of the *narrative here (19:20; 20:4, 10) as referring to a future period, but some others contend that this reading does not fit other biblical passages and have appealed to the cyclical structure of the rest of Revelation. The commentary follows the narrative as it appears to stand rather than taking sides on whether it should be read literally or figuratively, what the figure means or whether it is merely an *apocalyptic literary device. All three positions could use the presence of intermediate kingdoms in many ancient apocalypses to argue for their own position.

Revelation 20 and what follows especially expound the later chapters of Ezekiel: Israel's *resurrection (chap. 37), the war with Gog and Magog (chaps. 38–39) and the new Jerusalem's temple (chaps. 40–48), though Ezekiel lacks an explicit thousand-year period and Revelation lacks a literal, physical temple.

20:1-3. On the dragon/serpent, see comment on Revelation 12:3 and 9. Many early Jewish texts spoke of wicked angels being "bound," meaning chained and imprisoned, until a particular time, usually the day of judgment (especially **1 Enoch;* cf. Tobit, **Jubilees* and **Testament of Solomon*). Thus, for example, angels could be bound and hurled into the abyss (*1 Enoch* 88:1), and a leader of fallen angels could be hurled into fire on the day of judgment (*1 Enoch* 10:4-6).

Many Jewish texts include an intermediate period between the present and future ages; in some, it is an age of messianic peace, but in others it is the final tribulation, which came to be called the "messianic travail." The length of the final intermediate period varies in those ancient Jewish texts that include it, producing such diverse figures as forty years, three generations, four hundred years and nearly as many other calculations as there are opinions recorded, sometimes counted by "weeks" or jubilees of years. A few Jewish traditions divided history into seven one-thousand-year periods, of which the final period would be an age of peace. (*Plato's figure of one thousand years between death and reincarnation as the intermediate state of the Greek afterlife might have influenced this Jewish figure [cf. also the phoenix of Greek mythology, discussed by *rabbis], but this is not clear; the apocalyptic penchant for dividing history into ages, plus the natural appeal of a round number like one thousand [cf. one hundred in Is 65:20], and especially the Jewish application of Ps 90:4 to the seven days of Gen 1, are sufficient to explain the length of the period on purely Jewish terms.)

20:4. The resurrection of the righteous was a standard part of Jewish hopes; the subsequent reign of God's people with him is less frequent but also appears in Jewish literature (in the *Old Testament, cf., e.g., Is 60:5; Dan 7:14, 18). Roman citizens were normally executed by beheading (with axes in previous times, but with swords by the first century); they were first beaten and blindfolded and then forced to kneel.

20:5-6. The punishment of the rest of the dead after an interim period could be inferred

from Isaiah 24:21-22, even though Daniel 12:2 (like a number of *New Testament texts) does not distinguish the time between the resurrection of the righteous (after the tribulation Daniel mentions in 12:13) and that of the damned. Jewish texts sometimes spoke of the "second death" of the wicked at the judgment. On the reigning priests, see comment on Revelation 1:6.

20:7-10
The Folly of Gog and Magog

20:7-8. Gog, prince in the land of Magog, appears as the final enemy of Israel in Ezekiel 38–39, after Israel's regathering and perhaps the time of the *resurrection (chap. 37). Although scholars dispute whom Ezekiel has in mind, they agree that the enemies are from the north (like most of Israel's enemies in that period); *Josephus identified them with the Scythians. Gog and Magog thus recur often in Jewish texts as the final major enemies of Israel (rabbis, *apocalyptic texts, Dead Sea Scrolls).

Many Jewish teachers expected a mass conversion of pagans to Judaism in the messianic time, to be followed by mass apostasy in the time of Gog and Magog. The army of the nations is called Belial's (*Satan's) army in the *Dead Sea Scrolls (although this text corresponds more to the battle envisioned in Rev 19). The Old Testament often employs the phrase "like the sand on the seashore" for a vast multitude (e.g., Gen 22:17; 32:12; 41:49).

20:9. Some Jewish texts portrayed a wall of fire around Jerusalem (based on Zech 2:5; cf. Ex 13:21), and some depicted fire falling from heaven to consume the enemies (**Sibylline Oracles;* based on such judgments as Gen 19:24-25; Lev 10:2; 2 Kings 1:10); here see especially Ezekiel 38:22; 39:6. In the **Similitudes of Enoch,* angels stir up Parthians to invade the Holy Land, but the ground opens to swallow them up. The Dead Sea Scrolls call the remnant community the "camp of the *saints," a picture that also resembles Israel in the wilderness awaiting its final entrance into the Holy Land. For the gathering of the nations against God's people, see, for example, Zechariah 12:3 and 14:2; see comment on Revelation 16:13-16.

20:10. Judaism also anticipated the ultimate defeat and judgment of Satan, a position in harmony with the Old Testament view that God would reign unchallenged forever after the final day of judgment.

20:11-15
The Final Judgment

In various Jewish end-time scenarios, the day of judgment would be too late for *repentance (see e.g., **1 Enoch* 97:6; **4 Ezra* 7:33).

20:11. Although many writers also stressed a judgment of souls at death (some thoroughly Hellenized writers like *Philo had little interest in a future resurrection and judgment), Judaism had much to say about the day of judgment before God's throne at the end of the age. The image of a new heaven and earth (cf. Rev 21:2) is from Isaiah 65:17.

20:12. The opening of the books before God alludes to Daniel 7:10. Many early Jewish texts refer to heavenly tablets (**Jubilees, 1 Enoch, 2 Enoch, *3 Enoch, Testament of Abraham*) containing records of human history or God's laws; angels were continually writing down people's sins, recording deeds in books for the day of judgment. The "opening" of the books meant that everything was about to be made known (see also, e.g., *4 Ezra*). The final judgment would be a public judgment—there would be no way of hiding one's naked shame.

The image of the "book of life" appears in the *Old Testament (Ex 32:32-33; Dan 12:1; Mal 3:16) and was developed more extensively in later Jewish literature (e.g., Dead Sea Scrolls, *Jubilees*). All would be judged according to their works (Ps 62:12; Prov 24:12; Jer 17:10; 32:19; Ezek 18:30), but former sinful works canceled by true repentance would not count against the righteous (Ezek 18:21-22).

20:13-14. Jewish texts often spoke of the final day on which the wicked would be cast into the abyss of fire (e.g., *1 Enoch*). "Hades" (rendered "hell" in the KJV) was the abode of the dead (named for the Greek deity of the underworld, but not associated with him in Jewish texts), the equivalent of the Old Testament realm of the dead, Sheol. In many Jewish texts, as here, the wicked were held there under judgment until their final destruction or place of torture; in Jewish texts, Hades would return what was entrusted to it. Many *Gentiles questioned whether those who died unburied, especially at sea, had a

part in the afterlife; others questioned how those lost at sea could be resurrected. This passage is clear that even the sea would give up its dead for judgment.

20:15. Most Jewish people believed that all normal Jews (i.e., those who followed Judaism) would be saved, along with the small percentage of the righteous among the nations (Gentiles); the rest would be damned. Israel's faith had always been exclusivistic (worshiping one supreme God; John would add here the further exclusivism that God was truly worshiped only through Christ—cf. 1 Jn 2:23), and the Old Testament prophets had proclaimed a day of judgment that would call the nations as well as Israel to account. It would be too late to repent in that time.

21:1-8
Promise of the World to Come

Some pagan oracles predicted a future age of bliss, but the hope for a future age of peace, ruled by God alone, is a distinctively *Old Testament, Jewish and Christian hope.

21:1. Isaiah had already predicted the new heavens and new earth (Is 65:17; 66:22); the focus of attention in this new creation would be the new Jerusalem (Is 65:18; cf. 66:22). Many Jewish depictions of the *age to come (e.g., in **1 Enoch, Jubilees* and *Pseudo-Philo) emphasized the new heavens and earth. Some Jewish texts spoke of the replacement of the first creation by a new creation; others envisioned the new creation as a renewal of the old. Many texts described the end time in terms of the beginning, as a renewal of paradise (see comment on 22:1-5); so here the new creation recalls the goodness of the first creation before sin marred it (Gen 1:1).

Predictions of the sea's evaporation (perhaps in **Sibylline Oracles* 5:157-59, although in 5:447-49 the drying of the seas for ships does not do away with water) were far less common for *apocalypses. Some commentators point to much earlier Canaanite myths, but these would not have been sufficiently contemporary to be obvious to John's readers. The sea's disappearance here may accommodate a literal (and typically ancient Jewish) reading of Isaiah 65:17, which mentions heaven and earth but does not mention the sea; another explanation may be the symbolic depiction of an end to the mercantile power Babylon (13:1; 17:15; 18:17).

21:2. Like any city, "Jerusalem" meant both the place and the people who lived there; the new Jerusalem is thus a bride because its residents are a bride (19:7). Greco-Roman *encomia* (praises) of cities often turned to describing them as people, and Jewish people were familiar with Old Testament personifications of Jerusalem and the Old Testament depiction of God's people as his bride. Contemporary Jewish writers (e.g., Tobit, 2 Maccabees, Sirach, *Philo and *Josephus) and Jewish coins also called Jerusalem the "holy city" (in the Old Testament, cf. Neh 11:1, 18; Is 48:2; 52:1; 62:12); Jewish people (e.g., the *Qumran Temple Scroll) viewed it as the holiest of cities.

Pious Jews prayed daily for God to restore Jerusalem. The new Jerusalem, an Old Testament image (Is 65:18), had become a standard Jewish hope for the future, whether as a renewed and purified Jerusalem (Tobit, **Psalms of Solomon*) or (as here) a new city from above (probably **4 Ezra*); a city "from above" would be perfect, having been built by God himself (a hope found in some texts). In some apocalypses (**2 Baruch*), the righteous would dwell on high; in early Jewish literature like *Jubilees,* God would descend and dwell with his people.

21:3. The tabernacle had always symbolized God's dwelling among his people (Ex 25:8-9; 29:45; 1 Kings 6:12-13); God had also promised to "dwell" among his people as part of his covenant (Lev 26:11-12), especially in the sinless world to come (Ezek 37:24-28; 43:7-10; Zech 2:11). Ezekiel expected God to dwell with his people in the future temple (Ezek 43:7, 9); here the entire holy city functions as God's temple (see comment on the shape in 21:16; cf. 21:22), even greater than Ezekiel's promise.

21:4. These depictions allude especially to Isaiah 25:8; 35:10; 51:11 and 65:16-19.

21:5. On the promise of a future new creation, see comment on 21:1; for divine Wisdom spiritually "making all things new" in the present, cf. Wisdom of Solomon 7:27.

21:6. On Alpha and Omega, see comment on 1:8. The future age was portrayed as having abundant water (e.g., Is 35:1-2; Ezek 47:1-12; see comment on 22:1); for the offer of free water to the obedient, cf. Isaiah 55:1.

21:7. God had called Israel his children in the Old Testament (the language also continues in subsequent Jewish literature); those who had become his children were part of the covenant community and shared its promises for the future. God promised that his people who endured would inherit the world to come (Zech 8:12). The standard Old Testament covenant motif (also in *Jubilees*) is "I will be their God and they will be my people" (cf., e.g., Ex 6:7; 29:45; Lev 26:12; Jer 7:23; 11:4; 24:7; 30:22; 31:33; Ezek 11:20; 14:11; 36:28; 37:23, 27; Zech 8:8), a promise slightly augmented here.

21:8. Part of the promise in the Old Testament (e.g., Is 66:24) and Jewish literature was that the righteous who persevered would not have to share the world to come with their oppressors. Ancient cities forbade some morally or socially despised groups to live inside the city walls; here the exclusion is moral. Ephesus had a widespread reputation for the popular practice of *magic; sexual immorality was pervasive. Some of the sins may relate to issues addressed elsewhere in Revelation or Johannine literature. On the lake of fire, see comment on 19:20.

21:9-27
The Glory of the New Jerusalem

*Rhetoricians often showed off their epideictic (praise) skills by describing and praising magnificent cities like Rome (Aelius Aristides) or Athens (Isocrates); John here describes the greatest of cities. His *encomium* is on a renewed city whose prototype was also loved and praised in the *Old Testament (e.g., Ps 48) and whose future glory was the hope of the prophets (e.g., Ezek 40–48).

Jewish literature after Ezekiel also delighted to describe the glory of the new Jerusalem (e.g., Tobit 13:9-18, which includes streets paved with precious stones; 5Q15, a written blueprint in the *Dead Sea Scrolls modeled on Ezek 40–48; *rabbis), often as part of their praise to God for his coming deliverance. Most writers intended their imagery to praise the greatness of God and his holy city, however, not as literal depictions. Thus Isaiah has not only gates of crystal and walls of precious stones (Is 54:11-12), but walls of salvation and gates of praise (60:18). Zechariah, by contrast, noted that Jerusalem would not need walls because God would be a wall of fire for the city (Zech 2:4-5).

Some Jewish pictures of the end emphasized a return to Israel's pastoral/agricultural beginnings, without ruling out urban existence (*Sibylline Oracles* 3:744-51), but the *New Testament and most contemporary Jewish literature are more urban than most Old Testament depictions of the end (Amos 9:13-15). The symbolic imagery for paradise was adapted to speak most relevantly to the cultures addressed.

21:9. Given the commitment involved in ancient Jewish betrothal, a betrothed woman and thus a bride could be referred to as a wife (as in 19:7).

21:10. The description of the revelation in 21:9-10 parallels exactly that in 17:1-3. Ancient rhetoric commonly taught by means of contrasting characters, and the contrast between Babylon the prostitute and new Jerusalem the bride is explicit and intentional. Those who instructed public speakers emphasized clarity and vividness in descriptions, and this description exemplifies those characteristics.

Apocalyptic texts sometimes used a mountain reaching to heaven to provide visibility (**1 Enoch* 17:2; cf. 18:6-8; 24:1-3; 77:4; Mt 4:8); Jerusalem was also regarded as atop a mountain (**Letter of Aristeas* 83-84, 105-6; often in the Old Testament, e.g., Joel 2:1); the image here is rooted in Ezekiel 40:2.

21:11. The emphasis on the wealth of the new Jerusalem would remind older Jewish readers of the glory of the temple, whose gates had been adorned with gold and silver; John declares that the whole city will share the glory of the temple. God would set his glory among his people in the end time (e.g., Is 60:1-3; Sirach 36:14). Jewish writers spoke of supernatural precious stones that were luminous, or light-giving, by themselves.

21:12-13. The text of *1 Enoch* links the twelve gates of heaven to the twelve signs of the zodiac, but Revelation links New Jerusalem's gates to the twelve tribes, each tribe having its own position, as they did in the Old Testament during the wilderness wanderings and the settlement in the Promised Land. In the Temple Scroll (one of the Dead Sea Scrolls), some Jewish pietists noted that the tribes would be commemorated on the twelve gates

surrounding the new temple (three on each of the four sides). The image is from Ezekiel 48:31-35.

21:14. Jesus had made clear the continuity between the twelve tribes in the Old Testament and the first *apostles in the New Testament by his initial numbering of those apostles (see the introduction to Acts 1:15-26); Asian Christians would easily recognize the symbolism (Eph 2:20).

21:15. The "measuring rod" comes from Ezekiel 40:3; the measurements of the city were to produce awe of God's great promises and thus *repentance (Ezek 40:4; 43:10-11). The Dead Sea Scrolls also emphasize measurements of the future temple to call readers to endure for the future age. John's measurements differ from Ezekiel's, but not in a way that anyone would complain: his New Jerusalem is nearly two thousand times larger, without even counting its height. All such images simply depicted in a symbolic way the much greater grandeur to come (cf. 1 Cor 2:9-10).

21:16. That the dimensions are equal on all sides indicates that the city is shaped like a cube—like the holy of holies in the Old Testament temple (1 Kings 6:20), indicating that the presence of God would always be with them in its fullest intensity. Like some Roman cities of John's era, Ezekiel's city was also square, although not clearly cubed (48:32-34; cf. 45:2; 48:16, 20); but the cubing illustrates the point of Ezekiel 48:35—God's presence—all the more graphically. In some Jewish traditions, the future Jerusalem would expand in all directions (based on Is 54:2-3) and would become so tall that it would ascend to God's throne (based on Ezek 41:7). None of these descriptions is literal; if it is difficult to breathe atop the world's highest mountain (about five miles high), a city fifteen hundred miles high would not be very practical (at least under current laws of physics!). John elsewhere uses "twelve thousand" and 144 symbolically, and the connection may suggest that New Jerusalem is the city of God for the people of God (7:4-8).

21:17. This wall, literally 144 cubits, is quite disproportionate with a city fifteen hundred miles high, but this point reinforces its symbolic use; important ancient cities always had walls, hence John includes one. Although John could have excluded walls (Is 60:18; Zech 2:4-5) as he does the temple (Rev 21:22), emphasizing that they were unnecessary given the lack of aggressors, he would then not have been able to include his symbolic use of gates (see comment on 21:12-14).

Moreover, great ancient cities always had walls, so they were important for John's hearers to understand this image with reference to the greatest of cities. Apocalyptic texts (*2 Enoch*) sometimes called angels "men," and angels often appeared in human form in the Old Testament and Jewish literature.

21:18. Isaiah envisioned walls made of precious stones (Is 54:12); in contrast to Babylon's mere decorations of gold and pearls, every part of the new Jerusalem is precious. Jewish descriptions of the costly stones used to build the new Jerusalem included miraculous elaborations, hence absolutely pure gold that looked like clear glass would have fit the *genre. Metal was used in mirrors, so it could mean that the gold gives a perfect reflection.

21:19-20. Twelve stones were normally used in the Old Testament (Ex 28:17-20; Josh 4:2-3) and Judaism (e.g., *Pseudo-Philo) to signify the twelve tribes. The image is from Isaiah 54:11-12, where every part of the city (walls, foundations, gates, etc.) would be constructed with precious stones. Texts in the Dead Sea Scrolls interpret this passage in Isaiah figuratively and apply it to the righteous, who displayed God's glory (including the twelve leaders of the community). Tobit applies it literally to the future Jerusalem but includes streets that cry out praises to God.

That the *Septuagint of Ezekiel 28:13 lists a variety of precious stones may inform Revelation 17:4, but the use of twelve different precious stones, each signifying a tribe of Israel, is from Exodus 28:17-20; John's list is roughly equivalent to the Hebrew one in Exodus. Thus the image of Aaron's breastplate (Ex 28) evokes the priestly city for divine worship; the precious stones on his breastplate evoked the glory of God's people (Wisdom of Solomon 18:24). The possible allusion to Tyre's wealth (Ezek 28) contrasts the absolute wealth that is God's gift with the limited wealth acquired by Tyre and its imitator in Revelation, Babylon. (Both *Josephus and *Philo also link the twelve stones on

Aaron's breastplate with the twelve signs of the zodiac, but John characteristically avoids the astrological associations that some writers linked with the symbols he employs.)

21:21. In Tobit 13, the new Jerusalem's streets are paved with precious stones, and its walls and towers are of pure gold. Some rabbis expounded that the new Jerusalem's gates would be made of giant pearls and precious stones; in one later story, a man who ridicules a rabbi's exposition about the pearls sinks to the bottom of the sea and sees the angels working on the gates of the new temple; he then pays the price for his mockery when the rabbi disintegrates him with his eyes. But the main source for the image of precious stones in the future city is Isaiah 54:11-12. "Street" (11:8) might be functionally plural but probably refers to the main street (cf. "great street"—NIV) running through well-planned towns on the Greek model. First-century Jerusalem had major east-west and north-south streets, some of them as wide as thirteen meters (more than forty feet) at points, but the glory of the old Jerusalem will not compare with the glory of the one that God has promised.

21:22. One of the most basic hopes of ancient Judaism, recited daily in prayer, was the restoration and renewal of the temple (a hope from Ezek 40–48 onward). Even unlearned *Gentiles would be shocked; ancient cities conventionally had temples. But John offers a greater, not a lesser, vision than Ezekiel: the entire city is God's temple or dwelling place (see comment on Rev 21:11, 16; Zech 14:21), and God is its temple as well.

21:23. The city's light being the Lord's glory rather than the sun or moon is taken directly from Isaiah 60:19-20 (cf. the image of 24:23; 30:26). Many Jewish teachers stressed that God's light would fill the world to come, and that God would shine on his people.

21:24. The nations will gather to Jerusalem to worship and bring tribute in the end time (e.g., Is 60:3-22; Jer 3:17; Zech 14:16-19; cf. Tobit 13:11-12; see comment on Rev 3:9), bringing their glory into it (Is 66:12) and depending on its light (Is 60:1-3). In some biblical and other ancient Jewish depictions of the future, the Gentiles would be destroyed in the end time; in others, they would bring tribute; in still others, they would become part of God's people (Is 19:23-25; Zeph 3:9). Revelation draws on all these images, but clearly all true followers of the lamb from all peoples become New Jerusalemites (see comment on 7:16-17).

21:25-26. Like the gates of ancient cities, the temple's gates in the old Jerusalem were closed at night (cf. also the closing of gates in Ezek 46:1); but in the world to come, Jerusalem's gates will never need to be closed, because tribute rather than aggressors will come to them (Is 60:11). Revelation adds that the gates will also remain open because there will be no night, since the Lord will be the light (21:23; cf. Is 60:19-20). Night was also associated with sorcery, *demons and robbers, and most people considered it a good time to stay inside when possible. Contrast the city of wealth in Revelation 18:11-19.

21:27. Outcast groups (e.g., prostitutes) sometimes lived outside city gates, but an Old Testament allusion is in view here. There will be no more abominations in the house of God (Zech 14:21) or unbelievers in Jerusalem (Joel 3:17). The unclean had always been excluded from God's house so long as they remained in that state; this text refers to spiritual or moral uncleanness. The whole city is God's temple, or dwelling place (21:3, 16, 22).

22:1-5
The New Paradise

The *Old Testament sometimes figuratively described Jerusalem's restoration in paradise language (Is 51:3), but it was later Jewish texts that especially developed the picture of the end time as the restoration or amplification of the original paradise. Such texts present paradise as the home of the righteous, *Gehenna that of the wicked.

22:1. Despite Laodicea's lack, all strong cities should have a water supply. The rivers of paradise in Genesis 2:10 and the waters of Jerusalem (Ps 46:4) may supply some of the background for the image here; the immediate allusion, however, is to the rivers of water flowing from the new Jerusalem's temple in Ezekiel 47:1-11 (cf. Joel 3:18; Zech 14:8). (*Josephus, *Jewish Antiquities* 1.1.3, 38, employed the Greek geographical concept of Oceanus and claimed that the garden in Eden was watered by one earth-encircling river that divided into four parts: Ganges, Euphrates,

Tigris and Nile. John might allude to the *Spirit; cf. Jn 7:37-39.)

22:2. The description of the "tree of life" is from Ezekiel 47:12, which speaks of many trees bearing fruit each month (as opposed to one season a year) and leaves for healing. John adds "for the nations," and further modifies Ezekiel's "trees" to incorporate an allusion to paradise: although treated elsewhere in Jewish literature (e.g., **4 Ezra*), the "tree of life" is from Genesis 2:9. Later Jewish traditions further expounded the figure. (Some Jewish texts spoke of twelve trees, one for each month, in a four-river paradise, weaving together features of Ezekiel and Genesis in a manner similar to Revelation. Jewish texts frequently connected the twelve months with the twelve tribes and constellations, but John avoids astrological associations here, as elsewhere.)

22:3. The removal of the curse is from Zechariah 14:11, and in this context it refers to the reversal of the curse in Eden (Gen 3:16-19).

22:4. God's once-hidden face (Ex 33:20) will now be fully disclosed to his people (cf. comment on Jn 1:14-18); many other Jewish people also expected this in the end time. For writing on the forehead, see comment on Revelation 7:3; the point is that it will be clear that God's people belong to him alone.

22:5. Jewish visions of the future sometimes included the righteous shining like the sun or stars (**1 Enoch;* Sirach; *4 Ezra;* *rabbis; cf. Ex 34:29; Dan 12:3); for God shining on his people, see comment on 21:23. The righteous shining and also ruling in the future are combined in Wisdom of Solomon 3:7-8.

22:6-21
Final Announcements

Divine revelation and exhortation could go hand in hand. For instance, Tobit's praise to God (Tobit 13:1-18) includes both a description of the final Jerusalem (13:9-18) and a call to *repentance for Israel (13:6).

22:6-7. "Faithful and true" may represent a testimony oath formula (cf. 3:14; 22:18; Jer 42:5), verifying the veracity of the revelation. "God of the spirits of all flesh" is an Old Testament title for God (Num 16:22; 27:16) attested in subsequent Jewish (e.g., **Jubilees*; inscriptions) and *Samaritan texts; "Lord of Spirits" is also a divine title (**Similitudes of Enoch;* cf. similar expressions in the *Dead Sea Scrolls). Here John especially identifies God with the prophets.

22:8-9. Commentators on Ephesians and Colossians often suggest that some Jewish Christians in Asia Minor had been assigning too prominent a role to angels; if that error is at all in view here, this passage refutes it (cf. also Rev 19:10).

22:10. Daniel had been instructed to seal up his words until the end time (Dan 12:4, 9); some of his visions had applied only to the future (Dan 8:26; 9:24; 10:14; cf. Jer 23:20; 30:24; *1 Enoch* 100:6). By contrast, John's revelation is meant to be understood in his own generation as well as subsequently (which should affect how subsequent generations understand his book). On opening sealed documents, see comment on 5:1.

22:11. The righteous would stand, but the wicked would continue in their wickedness (Dan 12:10). John's exhortation here resembles an ironic invitation: let those who reject God's words do so, but they will pay the consequences (Ezek 3:27; cf. Jer 44:25; Amos 4:4-5; Eccles 11:9; **Sibylline Oracles* 3:57-59).

22:12. The Old Testament and Judaism stressed that God was righteous and would reward his people (e.g., Gen 15:1; Ps 18:20; 19:11; Is 49:4; **4 Ezra*). That God would give each person according to his or her works was also Old Testament teaching (e.g., Ps 62:12; see comment on Rev 20:12).

22:13. In three different forms, this verse attributes to the speaker (Jesus in 22:12) a divine title (see Is 41:4; 44:6; 48:12). A literary device called *inclusio* was used to frame a section of text by starting and ending on the same note; most of Revelation is framed by the announcement that the Lord of history is both Alpha and Omega, the beginning and the end (1:8; see comment on that verse).

22:14. On washed robes, compare 3:4-5 and 7:14, and see comment on 3:4; on the tree of life, see comment on 22:2.

22:15. "Dogs" probably refers to the sexually immoral, specifically unrepentant prostitutes (Deut 23:17-18). Elsewhere in Revelation state religion (in John's era, especially the imperial cult), combined with sorcery, martyrs Christians; immorality (both literal and spiritual) characterized the lifestyle of

*Gentile men. See also comment on 21:8 and 27; cf. also Genesis 3:24.

22:16. "Root of David" comes from the "stem of Jesse" (David's father) in Isaiah 11:1—the shoot that would spring up from the stump of David's lineage, after his descendants had lost the throne. Some commentators suggest that "root" reverses the image, making him David's source. The morning star is Venus, herald of the dawn (cf. Rev 2:28); in this case the text probably also alludes to Numbers 24:17, the star descended from Jacob (Israel) and destined to reign and crush the enemies of God's people. (The Dead Sea Scrolls also applied Num 24:17 to a conquering *messiah.)

22:17. Ancient Judaism especially associated the *Spirit with *prophecy. Everyone who hears the invitation is to join in it, and the thirsty may come and drink freely (Is 55:1) of the water of 22:1.

22:18-19. The words of a divinely instituted covenant or book were not to be altered (Deut 4:2; 12:32; cf. Prov 30:5-6). Covenants often included curses against those who broke them; those who followed idols thus invited all the curses of Deuteronomy (29:20, 27). Such claims of completeness or inspiration of books were often made in later times (e.g., *1 Enoch;* Josephus and **Letter of Aristeas* made this claim for the *LXX) to uphold their authority or to secure them against later editors interpolating their own ideas—a practice common in books that were not treated as sacred Scripture or other inspired writings.

22:20. "Come, Lord" translates the *Marana tha* prayer common in early Christianity (see comment on 1 Cor 16:22), acknowledging believers' early recognition of Jesus' deity. For the testimony of witnesses at the end of a document, see comment on John 21:24.

22:21. This was an appropriate concluding greeting, often attached to Christian letters (see comment on Rom 1:7).

Glossary

The most important terms and names are highlighted in the text with an asterisk (*).

Achilles Tatius. A second-century A.D. *rhetorician who wrote *Cleitophon and Leucippe,* a Greek romance novel.

Age to come. Many Jewish people divided history into at least two eras, the present age and the age to come. "*Eternal life" was the life of the coming age.

Akiba. A late-first- to early-second-century *rabbi whose opinions became very influential in rabbinic Judaism. After wrongly supposing Bar Kochba to be the *Messiah, he was flayed to death by the Romans and reportedly died reciting Judaism's basic creed: "The Lord is one."

***Apocalypses, apocalyptic literature.** The broadest use of the term today (usually followed in this commentary) refers to the thought world of literature dealing with the end time, often replete with symbols. The most precise sense of the term refers to a category of ancient Jewish literature growing out of *Old Testament *prophecy (especially Daniel and parts of Isaiah, Ezekiel, Zechariah, etc.) in which visions or travels through the heavens reveal divine secrets, usually including many about the future. Nonfuturistic Jewish mysticism was probably like a truncated apocalyptic with future expectations played down.

Apocrypha. A group of books accepted as part of the Catholic *canon between the *Old and *New Testaments but not part of the Protestant and Jewish canons. Most of these books circulated in the most common form of the *Septuagint, but ancient Jewish writers (e.g., *Philo, *Josephus and the *rabbis) did not treat them as Scripture. The New Testament never expressly cites these books with Scripture formulas but alludes to them fairly often. The books are 1–2 Esdras, Tobit, Judith, Additions to Esther, Wisdom of Solomon, Sirach (also known as Ben Sira or Ecclesiasticus), Baruch, Letter of Jeremiah, Prayer of Azariah and Song of the Three Young Men, Susanna, Bel and the Dragon, Prayer of Manasseh, and 1–2 Maccabees.

***Apostle.** The term applies literally to a sent or commissioned messenger; in Palestinian Jewish custom such a messenger (a *shaliakh,* or agent) acted on the full authority of his sender, to the extent that he accurately represented the sender's message. The closest *Old Testament equivalent to God's "apostles" in this sense was the prophets, although the apostles seem to have added an overseeing and evangelistic function that prophets (both Old Testament and *New Testament) did not always incorporate. Those prophets commissioned with special authority to oversee prophetic awakening (e.g., perhaps Elijah, Elisha, Jeremiah) or to lead God's people (e.g., Moses, Deborah, Samuel) thus may provide the best Old Testament models (cf. 2 Cor 3:6-18).

Apuleius. A second-century A.D. *rhetorician who may have dabbled in *magic and was initiated into the cult of Isis. He is most famous for his book *Metamorphoses,* now often called *The Golden Ass.*

***Aramaic.** A language related to Hebrew that was the standard international language of the ancient Near East before Alexander the Great's conquests made Greek the standard in the cities; it was still widely spoken in different

forms in Syria-Palestine (especially in rural areas) and farther east in Jesus' day. Most Jewish people in first-century Judea and Galilee probably spoke both Greek and Aramaic, though most were probably more fluent in one or the other. The Galilean peasants to whom Jesus often spoke were probably often more fluent in Aramaic.

Aristeas, Letter of. The *pseudepigraphic story of seventy wise translators of the *Septuagint (LXX) and how they impressed the ruler of Egypt. An Alexandrian document probably from the second century B.C., it seeks to portray Judaism in a positive light to Greeks.

Aristotle. A fourth-century B.C. student of *Plato who wrote treatises on logic, *rhetoric, nature and ethics. Many of his views became influential; his teachings were preserved especially by the school of philosophy known as the Peripatetics.

Ascetic. Austere and self-denying; some ancient religious and philosophical groups required this discipline as a matter of policy (often to show one's lack of attachment to mortal, bodily pleasures and pains). Asceticism grew in popularity in late antiquity, influencing the shape of later Christian monasticism.

Atone, atonement. The satisfaction of God's anger by venting it on a substitute instead of on the guilty person, attested in a wide range of ancient cultures and literature. Laying down one's life for another was highly regarded in Greek culture; some elements in Judaism came to emphasize that martyrs paid the price for others. But the concept especially derives from one kind of Old Testament sacrifice, in which the death of a sacrifice provides cleansing from sin's impurity and appeases God's anger so the sinner can be forgiven.

***Baptism.** The *Old Testament and the ancient world emphasized ceremonial washings to remove various kinds of impurity; Judaism had developed these washings more fully by the time of Jesus, and some sects (particularly the community that authored the *Dead Sea Scrolls) were especially scrupulous. One once-for-all ritual designed to purify *Gentiles of pagan impurity when they converted to Judaism (attested in the *rabbis, in *Epictetus and elsewhere) may have provided the most significant model for John the Baptist's and subsequently Christian baptism: it indicated an act of conversion, of turning from the old life to the new. This conversion-baptism, like regular Jewish washings in purity pools, involved immersion. Scholars generally presume that this practice was continued by the earliest Christians (though exceptions soon came to be allowed where needed; see *Didache* 7.1-3, probably from the late first century).

2 Baruch. A Jewish *apocalypse from the late first or early second century A.D.

***Canon.** The minimum of books agreed to constitute the absolutely authoritative, divinely inspired body of literature, by which other claims to revelation may be evaluated. Most of ancient Palestinian Judaism accepted the present *Old Testament as canonical; some groups added other works (probably some others works such as **1 Enoch* were accepted at *Qumran, and some *Diaspora Jews apparently highly valued other works now considered part of the *Apocrypha). Early Christians came to accept the books of the present *New Testament in addition to the Jewish canon. Some books were widely accepted very early (such as the four Gospels and most of Paul's letters); others were debated for some time before the majority of Christians agreed on them (such as 2 Peter) or rejected them (such as *1 Clement* or *Shepherd of Hermas*).

Chiasmus. An inverted parallel literary structure, in which the last line or idea corresponds with the first one, the next to the last corresponds with the second one, and so forth. The title for this structure is first attested later than the *New Testament, but scholars find examples of it as early as Homer.

***Christ.** The Greek equivalent of the Hebrew term for "*Messiah." Some *Gentile readers, unfamiliar with the Jewish sense of the term, may have taken it merely as Jesus' surname, a usage that became more common over time.

***Church.** The Greek term used in the *New Testament reflects one of the terms often used in the *Septuagint to translate the Hebrew word for the "congregation" (*qahal*) of Israel: "church" (assembly); the other was "*synagogue" (gathering). Although some scholars have suggested that Jesus could not have spoken about the church during his earthly ministry, the *Dead Sea Scrolls used the Hebrew term for God's community; hence Jesus could use this word in talking about his

future community (Mt 16:18; 18:17). The term was in common use in Greek culture for "assemblies," especially citizen assemblies in cities. (The popular modern surmise that the Greek word for "church," *ekklesia,* means "called-out ones" is mistaken; that sense is actually more appropriate for "*saints," i.e., "those separated" or "consecrated" [for God].)

Cicero. A famous Roman orator and statesman who wrote on a variety of subjects and flourished in the first century B.C.

***Client.** A person socially dependent on a *patron in Roman society (see *patron*).

Colony. A city either literally founded by the Romans or given honorary privileges as if it had been; its citizens were thus treated as citizens of Rome itself. In an early period Rome sometimes gave veterans land grants, settling them in these areas as Roman colonies.

Cynic. One type of antiworldly philosopher who expressed independence from social needs by begging. Cynics owned only the barest necessities (e.g., cloak, staff, begging purse) and often greeted passersby with harsh, antisocial words.

***Dead Sea Scrolls.** Writings from a strict Jewish sect (usually agreed to be *Essenes) that lived in the Judean desert, near modern Khirbet *Qumran. (A number of Qumran scholars today doubt whether the scrolls come from Essenes, but the sectarian scrolls do seem to fit the Essenes depicted in *Philo, Pliny the Elder and *Josephus. Some scholars also argue that Qumran was not a residence but merely a library, at least in some periods.) The writings include the War Scroll, the Manual of Discipline (Community Rule), the Damascus Document, the Thanksgiving Hymns, the Genesis Apocryphon, the Temple Scroll and commentaries on and expansions of various biblical books. Many of the most prominent and distinctive scrolls appear to have been written in the second century B.C.; most scholars believe that the site was abandoned during the Judean-Roman War (A.D. 66–70), although a few scholars allow that the site may have been revisited in later times.

Demons. Although the Greek term so translated often had a neutral sense in Greek (for souls or various kinds of spirits), Judeans and Galileans less shaped by Greek thought used especially the negative sense of the term. Negatively, it applied to nonhuman spirits other than God and the angels subservient to him; they were hostile to God's people. Exorcists typically employed various means for their extraction, such as stinky roots and magical formulas.

***Diaspora.** The Jewish dispersion outside Palestine. The technical term "Diaspora Judaism" is thus used interchangeably with "non-Palestinian Judaism" in this commentary.

Diatribe. A style of teaching used in ancient philosophical schools, generally characterized by *rhetorical questions and imaginary interlocutors.

Digression. A change of subject (usually brief) before returning to the previous point; this was a standard technique in ancient speeches and literature.

***Disciples.** Students or adherents of *rabbis or philosophers, normally committed to memorizing and living according to their master's teachings. Members of schools could pass the teachings on as canonical from one generation to the next.

Elect. Predestined, chosen. One of the most important tenets of Judaism was that the Jewish people were chosen in Abraham; the *New Testament applies the term to all of Jesus' followers, who are a chosen people in Christ. The vast majority of Jewish people followed the biblical emphasis that God was sovereign in human affairs; apparently the majority (exemplified in Josephus's depiction of the Pharisees) did not treat God's sovereignty as incompatible with human decisions and responsibility.

1 Enoch. An *apocalypse whose five sections may derive from different authors, *1 Enoch* is mainly (excepting the **Similitudes of Enoch*) from the second century B.C. Probably written in *Aramaic, it circulated especially in *Essene circles and survives in part in the *Dead Sea Scrolls and in full in later Ethiopic manuscripts.

2 Enoch. Although a Semitic original might derive from the first century, the current, edited work is from a later period and preserved in Slavonic.

3 Enoch. An *apocalypse from the perspective of rabbinic mysticism that is no later than the fifth century A.D. (probably from the third century).

Epictetus. A first-century *Stoic philosopher, originally a slave.

Epicureans. A philosophical school that valued pleasure (the absence of pain and disturbance) and disbelieved in the gods of ancient myths; see comment on Acts 17:18.

Eschatological. Dealing with the end time.

***Essenes.** A strict group of pietists, some of whom withdrew into the wilderness as monastics. The *Dead Sea Scrolls are probably from one group of Essenes. *Josephus estimates that there were about four thousand Essenes altogether.

***Eternal life.** In Jewish texts, the term literally means "the life of the world to come," bestowed after the *resurrection from the dead; taken from Daniel 12:2, it became a standard concept in most of early Judaism and was sometimes abbreviated "life." Some *New Testament passages speak of it as a present as well as future gift, because Jesus' resurrection has inaugurated salvation for the present.

4 Ezra. The bulk of this work (chaps. 3–14) is a Jewish *apocalypse from the late first (or possibly early second) century A.D.

Freedperson. A former slave who had been manumitted, legally freed.

Gehenna. A Greek transliteration of the Hebrew *Gehinnom,* which in Judaism had come to describe the abode of the wicked dead in torment. Various Jewish sources differ on the duration of punishment in Gehenna and whether the wicked would eventually be annihilated, continue to be detained or be released; the Gospels, Acts and Revelation are much more united in their picture of a *resurrection to eternal judgment.

Genre. The kind of writing a work is: for example, letter, historical *narrative, poem, science fiction or bomb threat. Although modern genres bearing the same title as ancient ones (e.g., letter, historical narrative, biography) have much in common with their predecessors, they typically differ in some features (see the introductions to the Gospels and Letters).

***Gentile.** Anyone who is not Jewish. In ancient Jewish parlance, this was often roughly the equivalent of how someone today might use "pagan" in a negative sense.

***Gnosticism.** A fusion of Greek, Jewish and Christian ideas that began by the early second century and presented a major challenge to early Christianity. The blanket term actually encompasses a variety of schools and movements that would not have all identified with one another, but some common features include an emphasis on "secret" knowledge outside the widely shared public traditions of other early Christian groups. Some scholars have seen tendencies toward developed Gnosticism in opponents presupposed in Pauline letters (especially in Colossians and the *Pastoral Epistles) and in the Gospel and letters of John. The same Greek ideas that later produced Gnosticism and Neo-Platonism were probably already at work in the first century, but we can reconstruct these from other sources without recourse to Gnosticism per se.

Gospel. The term so translated means literally "good news"; it was the sort of good news heralds would bring, and in Isaiah it refers to the specific message of God's restoration and salvation for his people. ("Gospel" as a literary *genre, a type of book in the *New Testament, is different, although these works do proclaim good news; on this sense of the term, see the introduction to the Gospels.)

Grace. In the *New Testament, the term generally represents the *Old Testament concept of God's unearned covenant love, which was expressed in passages like Deuteronomy 4:37; 7:7-9 and 10:15. The Greek term appears in inscriptions with reference to gifts and benefaction, and in the ancient ideology of reciprocity it invites gratitude.

Hagiography. A highly elaborated account of a holy person, meant to praise him or her.

***Hellenistic.** Although the commentary usually uses the term "Greek," "Hellenistic" is the more accurate technical term for the cultural fusion of classical Greek culture with Near Eastern cultures carried out in the eastern Mediterranean by Alexander the Great and his successors. "Hellenistic" Judaism is thus Judaism heavily influenced by Greek culture, i.e., "Hellenized."

High priests. Although the phrase applied to only the highest priest in the *Old Testament, *Josephus shows that in this period, the plural title applied to the aristocratic priests generally. Many prominent members of these aristocratic families in and around Jerusalem served on its municipal assembly (the Sanhedrin), and many were *Sadducees.

Hillel. A famous Jewish teacher contemporary with *Shammai and with Jesus' early childhood; usually more lenient than Shammai, his school's opinions generally prevailed after A.D. 70.

***Holy Spirit.** Although used only twice in the *Old Testament (Ps 51; Is 63), this term became a common title for the *Spirit of God in *New Testament times. Many people believed that the Spirit had been quenched since the completion of the Old Testament or that *prophecy continued only in muted form; but the Old Testament had promised an outpouring of the Spirit in the end, when the *Messiah would come. Jewish people especially associated the Spirit with prophecy and divine illumination or insight, and many also (especially the *Essenes) associated it with God purifying his people in the end time. The New Testament includes both uses, although it also speaks of the Spirit as a person like the Father and Son (especially in John 14–16), which Judaism did not do.

Hyperbole. A *rhetorical exaggeration or overstatement, a figure of speech often used by Jewish wisdom teachers to underline their point. The point of Jesus' hyperbolic illustrations is generally to grab the hearer's attention and force that hearer to take his point seriously.

Joseph and Asenath. An Alexandrian, *Hellenistic Jewish romance novel, describing the winning of Joseph's bride; probably non-Christian, it may derive from the first century A.D.

***Josephus.** A first-century Jewish historian who lived through the war of A.D. 66–70, which he describes along with the events leading up to it. His works (*Jewish War, Jewish Antiquities* and *Against Apion,* and his autobiography, the *Life*) are useful sources of information concerning first-century Palestine. Intended for a *Diaspora audience, his writings are quite Hellenized.

Jubilees. A theologically shaped *midrashic reworking of Genesis and part of Exodus. It circulated in (and probably derived from) *Essene circles in the second century B.C.

Justin Martyr. A philosopher both before and after his conversion to Christianity. Writer of two *Apologies* and the *Dialogue with Trypho,* he was a prominent Christian apologist (defender of the faith) in the second century A.D., until his martyrdom.

Juvenal. A Roman satirist who wrote especially in the early second century A.D. He is especially known for his invective against women, foreigners and *freedpersons who appeared to be encroaching on rights and privileges once reserved for aristocratic Roman males.

***Kingdom.** This term means "rule," "reign" or "authority" (not normally a king's people or land, as the English term could imply). Jewish people recognized that God rules the universe now, but they prayed for the day when he would rule the world unchallenged by idolatry and disobedience. The coming of this future aspect of God's reign was widely associated with the *Messiah and the *resurrection of the dead. Because Jesus came and will come again, Christians believe that the kingdom has been inaugurated but awaits consummation or completion. "Kingdom of heaven" is another way (Matthew's usual way) of saying "kingdom of God." Jewish people sometimes used "heaven" as a polite way of referring to "God" (as in Lk 15:21).

***Law.** *Torah* (the Hebrew word behind the Greek word translated "law") means literally "instruction" and "teaching," not just regulations. It was also used as a title for the first five books of the *Old Testament (the Pentateuch, the books of Moses) and sometimes for the whole Old Testament. This commentary uses the translation "law" because it is familiar to readers of most translations, even though the English term's semantic range is much narrower than the Jewish concept.

Livy. A first-century B.C. Roman historian.

Lucian. A second-century A.D. Greek satirist and *rhetorician.

LXX. The common abbreviation for the *Septuagint.

Maccabees. A priestly family who led the Jewish revolt against the *Hellenistic-Syrian empire in the second century B.C., they became the Hasmonean dynasty, an aristocracy that ruled Palestine until the time of Herod the Great.

3 Maccabees. A historical novel of Alexandrian Judaism; it may have been written in the first century B.C.

4 Maccabees. A Jewish treatise full of Greek (especially *Stoic) philosophy; probably written by an Alexandrian Jew in the early first century A.D.

Magic. Whether particular acts were attributed to magic or to positive divine power often depended on whether the observer approved of the person and his or her acts. Most people considered sorcery and magic to be secretive, antisocial and selfish, but it was widely practiced though sometimes associated with centers of magic such as Egypt and Ephesus. Popular magic included love charms, curses against opponents (even in sports), manipulation of spirits, and the like.

***Messiah.** The rendering of a Hebrew term meaning "anointed one," equivalent to the original sense of the Greek term translated "Christ." In the *Old Testament, different kinds of people were anointed, and some of the *Dead Sea Scrolls mention two main anointed ones in the end time, a king and a priest. But the common expectation reflected in the biblical Psalms and Prophets was that one of David's royal descendants would take the throne again when God reestablished his *kingdom for Israel. Many and probably most Jewish people in Palestine believed that God would somehow have to intervene to put down Roman rule so the Messiah's kingdom could be secure; many seem to have thought this intervention would be accomplished through force of arms. Various messianic figures arose in first-century Palestine, expecting a miraculous intervention from God; all were crushed by the Romans. (Jesus was the only one claimed to have been resurrected; he was also one of the only messiahs claiming Davidic descent, proof of which would be more difficult for any claimants arising after A.D. 70.)

Midrash. Jewish commentary or exposition on Scripture. The forms varied considerably but often included reading a text in the light of other texts, with careful attention to all nuances of details supposedly filled with divine significance. Because such methods of reading Scripture were common, early Christians could employ them in relating their message to other ancient Jewish Bible readers.

***Mystery cults.** A diverse group of Greek cults entered only by special initiation. The details of the initiation were to be kept entirely secret, although one could join a number of these societies. Apart from secrets and initiations, they varied widely in popularity, antiquity and appeal to different social classes.

Narrative. Story form (applied to both true and fictitious stories), as opposed to other literary forms, like explanatory discourse.

***New Testament.** The common modern term for the early Christian literature finally declared canonical by the *church and accepted by nearly all Christians today. Although it includes information about the new covenant (as does Jer 31:31-34), it is not technically a "testament" in itself; speaking of "Scripture written after Jesus's coming," however, would be cumbersome.

***Old Testament.** The common modern term for the Hebrew Bible (including *Aramaic portions) as defined by the Jewish and Protestant Christian canons; Jewish readers generally call this the Tanakh. Although it includes information about God's covenant with Israel, it is not technically a "testament" in itself.

Papyri. Documents contemporary to the *New Testament, especially business documents and correspondence, written on papyrus scrolls (writing material from the papyrus reed) and preserved especially in the dry climate of Egypt.

***Parable.** Jewish teachers regularly illustrated their teachings with brief stories, similar to the use of sermon illustrations today (though often with less verisimilitude). Jesus' parables, like those of other teachers, were meant to illustrate his points graphically, hence many details in these parables appear there only to advance the story line. Modern interpreters who read too much into such secondary details run the risk of overlooking the parable's real point or points. At the same time, parables sometimes had multiple points of contact with the realities they represented (e.g., the four soils in the parable of the sower); explicit interpretations often followed ancient Jewish parables, and they often contained such multiple points of contact. The Greek word for "parable" normally means a comparison; the Jewish practice behind Jesus' usage included a wide range of meanings (riddles, proverbs, fables, etc.) suggested in the Hebrew term *mashal*.

Pastoral Epistles. Three Pauline letters—1 and 2 Timothy and Titus—that give Paul's advice to young ministers carrying on his work.

***Patron.** The social superior in the Roman

patron-*client relationship, who granted favors to and acted as political sponsor for his clients, or social dependents. The obligations in the relationship were viewed as reciprocal; clients were to grant the patrons honor as their benefactors. In the technical sense, patronage was a Roman political institution; *New Testament scholars today often apply the designation more generally to include what was technically benefaction in the Greek-speaking eastern Mediterranean world (and to encompass the English sense of "patron" as well).

Petronius. A first-century A.D. satirist who indulged in pleasure. After incurring the jealousy of Nero's guide and reputed sexual partner Tigellinus, Petronius killed himself when it became obvious what his fate would be.

***Pharisees.** A movement of several thousand (*Josephus estimates six thousand) pious Jewish men who sought to interpret the *law carefully and according to the traditions of previous generations of the pious. They lacked much direct access to political power in Jesus' day but were highly respected and thus influential among the larger population. They emphasized their own version of purity rules and looked forward to the *resurrection of the dead. Although early Christians more often emphasized occasions on which the Pharisees differed from Jesus, many of their other views resembled his.

***Philo.** A first-century Jewish philosopher committed to both the Greek translation of the Torah and to Greek education, especially eclectic Middle Platonic philosophy. He lived in Alexandria, Egypt, and held a position of great influence and prestige in the Jewish community there.

Pilate. Pontius Pilate was governor of Judea from A.D. 26 to 36. His position was probably secure as long as his patron Sejanus remained in power in Rome; but after Sejanus's execution on October 19, A.D. 31, he undoubtedly had to act more carefully. *Josephus and *Philo both portray Pilate as insensitive to Judean concerns. He brought Roman standards, which Jewish people viewed as idolatrous, into Jerusalem under cover of night, provoking public protests that forced him to withdraw them. He diverted funds from the temple treasury for an aqueduct and otherwise infuriated Judeans. His massacre of *Samaritans finally provoked his recall to Rome.

Plato. A student of Socrates whose idealism and dualistic worldview became influential in subsequent Greek thought. He flourished in the fourth century B.C., but his thinking influenced Middle Platonists (such as Philo) in the first century A.D. and later; a developed form of Platonism became a dominant philosophic force later in antiquity.

Plutarch. A Greek biographer and moralist whose writings illustrate many of the views prevalent in the first and second centuries A.D.

Prophecy. Speaking forth God's message by his inspiration. It can, but need not, involve prediction. Although "prophet" technically refers to anyone who prophesies, most Jewish people reserved this title for God's spokespeople of the distant past.

***Proselyte.** A convert (as used in this commentary, a convert to Judaism).

Psalms of Solomon. Jewish psalms from the mid-first century B.C., somewhat like the *Qumran hymns. Probably all from one author, they might reflect early Pharisaic piety, or at least the form of early Judaism in which Pharisaism was also at home.

Pseudepigrapha. A broadly defined, modern collection of very diverse ancient Jewish texts outside the Jewish and Christian canons and other collections such as the *Apocrypha, *Dead Sea Scrolls and *rabbinic literature. So named because most of them are *pseudepigraphic. These works include (among others) *2 *Baruch*; *1, 2 and *3 *Enoch*; *4 *Ezra;* **Jubilees;* **Letter of Aristeas; Life of Adam and Eve;* *3 and *4 Maccabees; *Martyrdom of Isaiah;* **Psalms of Solomon;* **Sibylline Oracles;* **Testament of Job;* **Testament of Solomon;* and **Testaments of the Twelve Patriarchs.*

***Pseudepigraphic.** Purporting to be written by someone other than the real author, something like writing under a pen name today.

Pseudo-Philo. Pseudo-Philo's *Biblical Antiquities* retraces biblical history from Adam to the death of Saul. Possibly from Palestine, the work probably derives from the late first or early second century A.D. but betrays no specific Christian influence.

Pseudo-Phocylides. A probably Jewish work of moral wisdom, influenced by *Stoic ethics. It may date to the late first century B.C. or early first century A.D.

Pythagoreanism. A mystical philosophy attributed to Pythagoras, a Greek thinker of the sixth century B.C. Like other Greek philosophical schools, it had its own unique traits; one of its most basic tenets was the mystical significance of numbers. Pythagoreans also practiced strict vegetarianism.

Quintilian. An influential first-century Roman *rhetorician.

Qumran. The place where the *Dead Sea Scrolls were found (Khirbet Qumran); hence "Qumran community" is used to describe the people who lived there and wrote the Scrolls.

***Rabbi.** Jewish teacher ("my master"). Sometime after A.D. 70 the term became a technical one for those ordained in the rabbinic movement, which probably consisted primarily of Pharisaic *scribes. (To accommodate customary usage this commentary sometimes applies the term to Jewish teachers of the *law in general, although such common usage may have technically been later; it also applies the term to the teachings of Jewish legal experts collected in *rabbinic literature.)

Rabbinic literature. The massive body of literature containing opinions attributed to various Jewish teachers considered part of the rabbinic movement. The earliest written edition of some of this material comes from the early third century A.D. (mostly citing second-century *rabbis). Although all the written sources and most of the rabbis they cite are later than the *New Testament, this literature is useful to illustrate one stream of Jewish tradition. Rabbinic works include the *Mishnah, Tosefta, Mekilta on Exodus, Sifra on Leviticus, Sifre on Numbers and Deuteronomy,* and later (after the third century) the Babylonian and Palestinian Talmuds and various works in the Midrash Rabbah.

Repentance. In the *New Testament, this term does not merely mean "change of mind" (as some have gathered from the Greek term); it reflects the *Old Testament and Jewish concept of "turning around" or "turning away" from sin. Jewish people were to repent whenever they sinned; the New Testament uses the term especially for the once-for-all kind of turning that a *Gentile would undergo when converting to Judaism or any sinner would undergo when becoming a follower of Jesus.

***Resurrection.** Although some scholars in the early twentieth century associated the idea of Jesus' resurrection with Greek *mystery cults, it is now widely understood that early Christian belief shared little in common with the mysteries' myths, which simply reenacted a seasonal revivification of fertility. Rather, Jesus' resurrection was rooted in a Jewish hope, which in turn was rooted in notions of God's covenant, promise and justice from early in Israel's history. Ancient Jewish sources show that most Palestinian Jews believed that God would resurrect the bodies of the dead (at least the righteous, and many believed also the wicked), at the end of the age, as articulated in Dan 12:2. There was, however, never any thought that one person would rise ahead of everyone else; thus Jesus' resurrection, as an inauguration of the future *kingdom within history, caught even the *disciples by surprise.

***Rhetoric.** The art or study of proper forms and methods of public speaking, highly emphasized in antiquity. Although only the well-to-do had much training in it (as the more popular of the two forms of advanced education in antiquity), the rhetorical forms and ideas they used filtered down to the rest of urban society through public speeches, in a manner similar to that in which television permeates modern Western society.

***Sadducees.** Most belonged to the priestly aristocracy that had prospered due to its good relationship with the Romans; they pacified the people for the Romans and the Romans for the people. They controlled the prosperous temple cult, were skeptical of Pharisaic traditions and apparently supernaturalistic emphasis on angels and other spirits, and most of all were disturbed by talk of the *resurrection of the dead, other end-time beliefs, and anything that could arouse unrest. Messianic beliefs about the end time or revolutionary demands for change could—and ultimately did—challenge the stability of their own position in Palestine.

Saints. Some translations use this term (*hagioi,* singular *hagios*) for the "holy ones," that is, for those who have been consecrated to God. This title for believers indicates their ritual status as set apart exclusively for God's use (even when some of them fail to recognize it).

Samaritans. A people of mixed Jewish and

*Gentile ancestry who claimed descent from Jacob and worshiped the God of Israel, but felt that Mount Gerizim rather than Jerusalem was the holy site for worship. They engaged the Jews in bitter rivalry, often leading to political hostilities in Jesus' day, sometimes requiring Roman intervention.

Sanhedrin. The term designates an assembly; major cities could have their own senates, or assemblies. Jerusalem's Sanhedrin decided local Judean affairs, though they remained answerable to Rome's appointed agents.

Satan. Originally "the satan," "the adversary" (as in the Hebrew text of Job), but used as the devil's name by the end of Israel's exile (2 Chronicles, Zechariah) and standard by the *New Testament period, although many Jewish people also called him by other names. In contrast to some modern theologians, the first readers of the New Testament would have viewed him as a literal, personal, evil spiritual being. Developing *Old Testament themes, early Judaism viewed Satan as accuser (cf. Job 1:6–2:7; Zech 3:1-2), tempter (cf. 1 Chron 21:1) and deceiver.

Savior. A title often used for gods and divine rulers in Greek culture but also used in the *Septuagint for Israel's God as the deliverer of his people (e.g., Is 45:15, 21).

***Scribes.** Throughout the Roman Empire, local executors of legal documents. In Jewish Palestine these presumably would be the people who also taught children how to read or recite the Scriptures; at least some of them were experts in the legal issues contained in the *law of Moses (i.e., they were predecessors of the *rabbis); some of them were *Pharisees.

Seneca. A Roman *Stoic philosopher, an adviser to Nero in that emperor's early days.

***Septuagint.** The Greek version of the Old Testament widely circulated in the *New Testament period. (It is commonly abbreviated *LXX because of the tradition that seventy scholars were responsible for it.) Although various recensions, or versions, of the Septuagint existed, this commentary, for the sake of avoiding technical questions beyond its scope, refers to the most widely accepted standardized form.

Shammai. A famous Jewish teacher contemporary with *Hillel and with Jesus' early childhood; usually stricter than Hillel's, his school's opinions usually prevailed in the time of Jesus.

Shroud of Turin. The purported burial cloth of Jesus. Against its authenticity are the results of its radiocarbon dating; in its favor are its many Palestinian features (including traces of Palestinian plant fibers) and indications of first-century Jewish burial customs. The origin and character of the image have still not been resolved by investigators.

Sibylline Oracles. *Pseudepigraphic Jewish oracles modeled after pagan oracles of the same name, attributed to the ancient prophetess Sibyl and believed to have been collected from Jewish circles in Alexandria, Egypt and Asia Minor. Their composition spans a wide range of time, but most believe them to be mainly pre-Christian.

Similitudes of Enoch. These *parables of *1 *Enoch* (chaps. 37–71) may be from the first century B.C. or as late as the first century A.D. Because this section of Enoch alone is not represented in fragments from *Qumran, it remains disputed whether it is pre-Christian, although the majority of Enoch scholars currently argue that it is.

***Son of God.** The phrase meant many things to many different people in the ancient world, but it could strike some Roman pagans as portraying Jesus as a rival to the emperor. Most *New Testament texts evoke *Old Testament usage, where the term was applied generically to all Israel (Ex 4:22) but specifically to the Davidic king (2 Sam 7:14), especially (after 2 Samuel) the ultimate restorer (Ps 2:7; 89:27). Although most Jewish texts from the time of Jesus do not use it to designate the *Messiah, some do (*Essene interpreters of 2 Sam 7:14).

***Son of Man.** Hebrew and *Aramaic used the expression to mean "a human being," but Jesus used it as a designation for himself, based on the particular use in Daniel 7:13-14. There "one like a son of man," a representative for the *saints who suffer before receiving the *kingdom (7:25-27), receives the right to rule eternally. This passage was not usually applied to the *Messiah in Jesus' day, and not until he clearly cited Daniel 7 at his trial did his opponents fully understand the claim he was making.

Spirit. When capitalized in this commentary, it refers to the Spirit of God, the *Holy Spirit.

Stoicism. The most popular form of Greek philosophy in Paul's day. Although most

people were not Stoics, many Stoic ideas were widely disseminated. For more detail, see comment on Acts 17:18.

Suetonius. A Roman historian whose early-second-century A.D. biographies of first-century A.D. emperors contain much useful information.

***Synagogues.** Assembly places used by Jewish people for public prayer, Scripture readings and community meetings.

Synoptic Gospels. Matthew, Mark and Luke; called "synoptic" because they overlap so much, sharing common sources (probably especially Mark and "Q").

Tacitus. A Roman historian whose early-second-century history of first-century Rome is among our most dependable sources for that era (albeit often tainted with Tacitus's cynicism).

Targum. A paraphrase of the Hebrew Bible into the *Aramaic vernacular. Although it is impossible to date the extant written targums, the activity of translation is as old as Nehemiah 8:8 and could have developed into expanded paraphrases at an early date.

***Tax gatherers.** A despised group of Jewish people who collected taxes for the government at a profit. Rome allowed wealthy men to contract with their own cities or districts to see to it that taxes were paid; because they had to cover any shortfall themselves, they were not inclined to have mercy on their clients. Herod the Great had used local taxes to finance not only the Jerusalem temple and his palaces but also pagan temples in *Gentile enclaves in Palestine, an action that had undoubtedly further alienated his people. Tax collectors thus appeared as collaborators with the occupying pagan power. Some tax collectors were customs agents, collecting customs taxes from traveling merchants. "Publican" is a modern English mistranslation of a Greek term that simply meant "*tax gatherer." The Romans did not use literal *publicanoi,* a special kind of tax farmers, in the Palestine of Jesus' day, but there were many tax collectors there.

Testament of Job. A *Hellenistic Jewish account of Job's suffering and triumph, maybe from Egypt and often dated to the first century B.C. or the first century A.D. (though some argue that at least part of the work is no earlier than the late second century).

Testament of Moses. Some think this document derives from the Maccabean era; it could also be dated after A.D. 70 (cf. 6:9), but probably it dates to around the mid-first century A.D. (it describes only *part* of the temple being burned).

Testament of Solomon. Probably a non-Christian Jewish work from about the third century A.D., possibly from Asia Minor; its exorcist rites reflect thorough familiarity with ancient magical texts.

Testaments of the Twelve Patriarchs. Probably a mainly pre-Christian Jewish work with some Christian interpolations. Its date is uncertain. *Pseudepigraphic "testaments," or final instructions, are left by each of Jacob's twelve sons for their children.

Theon. A Greek *rhetorician whose manual of rhetoric is helpful in reconstructing ancient speaking and writing styles (along with handbooks by *Quintilian and others).

***Zealots.** Jewish revolutionaries who became prominent by this name especially shortly before the first Jewish war (A.D. 66–70). Seeking to exonerate his people before the Romans, *Josephus marginalized them as robbers and troublemakers, but Zealot sympathizers were almost certainly widespread, apparently even among many *Pharisees and some younger Sadducees. Although "Zealots" technically refers to only one of the resistance groups, modern writers have often used the term as a convenient title for the entire resistance movement.

PAUL'S SECOND MISSIONARY JOURNEY

PAUL'S THIRD MISSIONARY JOURNEY

The New Testament World: A Chronology

ROME (rulers)	PALESTINE (government)	JUDAISM	CHRISTIAN BEGINNINGS
		■ Dead Sea Scrolls (2nd century B.C. through mid-first century A.D.) Jewish teachers:	
■ Augustus (27 B.C.–A.D. 14) ◊ hailed as "Savior" ◊ Pax Romana	■ Herod the Great (c. 37–4 B.C.)	■ Shemaya, Abtalion ■ Hillel and Shammai	■ Birth of Jesus (c. 7 B.C.?)
	Archelaus, ethnarch (4 B.C.–A.D. 6)		■ Return from Egypt to Galilee
		■ Annas, high priest (A.D. 6–15)	■ Work for carpenters in Nazareth (4 miles from Sepphoris)
	■ Judas's revolt and Sepphoris burned (A.D. 6) ■ Roman procurators over Judea (A.D. 6–37)	■ Caiaphas, high priest (A.D. 18–26)	
■ Tiberius (A.D. 14–37) ◊ patron of Sejanus ◊ expels Jews from Rome	■ Herod Antipas, tetrarch of Galilee (4 B.C.–A.D. 39) ■ Pontius Pilate (A.D. 26 or 27 to 36 or 37); probable client of Sejanus	■ School of Shammai predominates ■ Gamaliel I a prominent Pharisaic teacher (School of Hillel)	■ John the Baptist, Jesus begin public ministry (c. A.D. 27) (Lk 3:1; Jn 2:20) ■ Jesus crucified (c. A.D. 30) ■ Church begins in Jerusalem ■ Hellenist movement (Acts 6) ■ Stephen's stoning ■ Paul converted (c. 32) ■ Church in Antioch, Gentile expansion
■ Gaius Caligula (37–41) ◊ tries to set up his image in the temple	■ Herod Agrippa I, popular king (37–44) ◊ dies in Acts 12:23; Josephus (44)	■ Theudas's revolt (c. 45)	■ Apocalyptic ideas flourish probably due to Gaius (cf. 2 Thess 2:3-4)
■ Claudius (41–54) ◊ patron of Pallas ◊ expels Jews from Rome over "Chrestus" (possibly 49)	■ Procurators (44–66) and Herod Agrippa II (c. 50–92, over various territories)	■ Simeon b. Gamaliel ■ Rich (Sadducean) priests and Galilean landlords oppressing the poor	■ Paul's first missionary journey (45–48) ■ Jerusalem Council (Acts 15; c. 49) ■ Second Journey (50–53): Philippi, Thessalonica, Corinth; 1–2 Thessalonians ■ Mid-fifties: 1 Corinthians; Romans
■ Nero (54–68) ◊ murders, orgies, bestiality, matricide	■ Felix: corrupt client of Pallas (52–60)	■ Socioeconomic tensions building; Zealots arise	■ Paul caught in temple, taken to Caesarea (c. 58–60) ■ James written?

ROME (rulers)	PALESTINE (government)	JUDAISM	CHRISTIAN BEGINNINGS
	■ Festus: fair procurator (60–62)		■ Paul sent to Rome (c. 60–62)
			■ Prison Epistles (Ephesians, Philippians, Colossians, Philemon; c. 60–62)
			■ Paul must address philosophy, Hellenistic and Jewish mysticism, and household codes
	■ Festus dies (62); replaced by corrupt govenors		■ Paul probably released after 2 years (62)
			■ James brother of Jesus martyred (62)
			■ 1 Timothy, Titus
			■ Paul's reimprisonment
■ Fire of Rome (64) ■ Nero burns Christians alive (64)			■ 1–2 Peter; 2 Timothy; Mark? (c. 64)
	■ Massacres in Caesarea, Decapolis		■ Peter and Paul executed (c. 64)
		■ War with Rome (66–70)	■ Jerusalem church flees
			■ Hebrews written (c. 68)?
■ Nero dies; replaced by Galba, Otho, Vitellius (68–69) ■ Vespasian (69–79)		■ Jerusalem falls; temple destroyed (70) ■ Sadducees, other groups disbanded ■ Johanan ben Zakkai reorganizes Pharisaism ■ Gamaliel II, Samuel ha-Katon; troubles with "schismatics" (many possibly Jewish Christians; c. 85)	■ False prophets say the end has come (c. 70) ■Luke-Acts? (Greco-Roman) ■ Matthew? (Syrian-Jewish)
■ Titus (79–81)			
■ Domitian (81–96) ◊ later in his reign, demands worship ◊ Christians and others persecuted			■ John (90s) ■ 1, 2, 3 John ■ Revelation
		■ Akiba, Ishmael	■ Gentile Christianity overshadowing Jewish Christianity in many areas, understanding its roots less
■ Nerva (96–98) ■ Trajan (98–117) ■ Hadrian (117–138)	■ Jerusalem paganized (Aelia Capitolina, 135)	■ Bar Kochba revolt (132–135)	■ *Justin Martyr ■ Irenaeus, Athenagoras, Clement of Alexandria, Origen, Tertullian
		■ R. Judah ha-Nasi I (c. 200) codifies the Mishnah (later Amoraic rabbis' opinions and rulings codified in the Gemara)

A Chiasmus (Acts 2:22-36)

A This one [Jesus] . . . you crucified and killed

B But God raised Him up, having loosed the pangs of death

C David says . . .
MEN, BROTHERS, IT IS NECESSARY TO SPEAK TO YOU BOLDLY

D That the patriarch David died and was buried
(and his tomb is with us to this day)

E Being therefore a prophet, and knowing

F That God had sworn with an oath to him

G That He would set one of his descendants on his throne

H He foresaw and spoke

I Of the resurrection of Christ

J That He was not abandoned to Hades

J' Nor did His flesh see corruption

I' This Jesus God raised up

H' Of that we are all witnesses

G' Being therefore exalted at the right hand of God

F' Having received from the Father the promise of the Holy Spirit

E' He has poured out this which you see and hear

D' For David did not ascend into the heavens

C' David says . . .
ASSUREDLY, THEREFORE, LET ALL THE HOUSE OF ISRAEL KNOW

B' That God has made Him Lord and Christ

A' This Jesus whom you crucified

Praise for the *First Edition* of *The IVP Bible Background Commentary: New Testament*

"Keener writes in clear, non-technical language for the lay person. His commentary is a valuable tool for teachers, small-group leaders, pastors, missionaries (who are trying not to impose their own cultural biases in their new setting), and all who enjoy digging deeper in their personal study of God's Word."—*Discipleship Journal*

"The product of a decade of work, this commentary is indispensable for Bible study. . . . By selectively providing background information from a variety of primary and secondary sources, Keener admirably bridges the cultural gaps experienced by modern readers of the Bible. . . . Sermons and lessons will be greatly enhanced by referencing this excellent resource."—*Ministries Today*

"Well-written in a style suitable for both professional students and daily disciples."—*World Christian*

"A stunning work destined certainly to become a standard resource for study of the New Testament. . . . Though produced by a competent scholar, it is not . . . intended to be a technical, scholarly work . . . for me Keener's work is going to be a prime reference tool and constant companion from now on in my personal study of the New Testament text."—*Journal of Psychology and Theology*

"Keener has accomplished a monumental task in assimilating a vast amount of primary and secondary material on first-century Jewish and Greco-Roman culture and making it accessible to nonspecialist readers. In addition, he displays a wide knowledge of New Testament scholarship (Pauline studies, gospels studies, etc.). To make this commentary useful to a diverse audience, Keener has minimized theological comments and emphasized historical, cultural, and social background. The text is clearly written and fairly free of technical jargon. . . . This volume should be a useful addition to public, academic, and seminary libraries."—*Library Journal*

"The commentary will be of value to pastors in sermon preparation . . . written in a clear, non-technical language and arranged verse by verse. It provides at least some cultural background for nearly every verse in the New Testament. . . . You need to have it in your theological library."—*A. M. E. Zion Quarterly Review*

"A few hours with this volume will rapidly convince one that Craig Keener . . . is a rising star among evangelical New Testament scholars. . . . Written simply and clearly, though meticulously researched, this book will be a valuable acquisition for every thoughtful student, pastor, and teacher who tries to understand the original setting for any passage in the New Testament. . . . [C]arefully researched and judiciously written from an orthodox Christian perspective to provide dependable information without overt theological bias. I heartily recommend it."—*Enrichment* (Assemblies of God)

"This is a splendid book to have next to your Bible . . . a fascinating Bible study resource."—*Good News* (United Methodist)

"An excellent resource for pastors and teachers. . . . This is background information that most pastors' libraries will not contain, which makes it a vital tool for serious Bible study and preaching."—*The Communicator* (Nazarene)

"In the American Christian publishing world, a world filled with adequate but probably unnecessary commentaries and Christian helps, Craig Keener . . . has done the remarkable. He has produced a work that was genuinely needed but not envisioned—until now."—*Faith and Mission* (Southeastern Seminary, Southern Baptist)

"A fine tool for personal Bible study . . . Unlike a typical commentary, which interprets the meaning of each text, Keener's book offers insights which enable readers to study individual texts with greater personal involvement and practical gain. The author, an evangelical Protestant, is remarkably balanced and unbiased in his analysis, making this quite suitable for Catholic use—a valuable supplement to a good concordance, commentary, and Bible dictionary."—*The Bulletin of Applied Biblical Studies* (The Franciscan University of Steubenville)

"One of the most useful available reference tools for pastors and laypeople alike, and I frequently recommend it from the pulpit. The reader simply has to look up his comments on a passage to find out, for example, why it was momentous that the prodigal son received sandals and a ring when he returned to his father. Although background material is often notoriously slippery and debatable, Keener makes it useful for students of the Scripture."—Gary Shogren, *Biblical Theological Seminary*

"Keener succeeds in being informative and, this reviewer thinks, more than fair in trying not to impose his views on the texts. . . . Keener, as he promised, wrote a 'popular' rather than a scholarly book. Keener's scholarly credentials are strong and his book is a God-send to busy pastors. As already indicated, it is of great help to Bible students who do not have access to a theological library."—*Southwestern Journal of Theology* (Southern Baptist)

"Specifically designed to meet the needs of pastors and students who have less access to scholarly resources and less time to mine exegetical details. As such, it is extremely accessible and user friendly, a welcome addition to the pastor's bookshelf."—Christopher Hall, Eastern University

"Carefully researched yet accessible for the busy pastor or other reader, this commentary puts years of research at the reader's fingertips, passage by passage, in a single volume."
—George O. Wood, general superintendent of the Assemblies of God

About the Author

Craig S. Keener (PhD, Duke University) is professor of New Testament at Asbury Theological Seminary. Some of his seventeen books include *Miracles: The Credibility of the New Testament Accounts, The Historical Jesus of the Gospels* and commentaries on Matthew (*The Gospel of Matthew: A Socio-Rhetorical Commentary*), John (2 vols.), Romans, 1-2 Corinthians, Revelation, and a currently-being-published four-volume commentary on Acts. Four of his books, including *The IVP Bible Background Commentary: New Testament* have won *Christianity Today* book awards.

"Keener has gathered a host of background material from a broad range of ancient and modern sources and put them literally at the preacher's fingertips."

CHERYL SANDERS
Howard University Divinity School

"It is nearly impossible to imagine that one person could have compiled all the information contained within this volume. But Keener has not simply compiled material; he has mastered it. . . . At every turn of the page, those who treasure the Bible will find something new and valuable."

Themelios

"Carefully researched yet accessible for the busy pastor or other reader, this commentary puts years of research at the reader's fingertips, passage by passage, in a single volume."

CRAIG S. KEENER (PhD, Duke University) is professor of New Testament at Asbury Theological Seminary. Some of his seventeen books include *Miracles: The Credibility of the New Testament Accounts*, *The Historical Jesus of the Gospels* and commentaries on Matthew (*The Gospel of Matthew: A Socio-Rhetorical Commentary*), John (2 vols.), Romans, 1-2 Corinthians, Revelation, and a currently-being-published four-volume commentary on Acts. Four of his books, including *The IVP Bible Background Commentary: New Testament*, have won *Christianity Today* book awards.

JESUS TOLD US NOT TO PRAY LIKE THE PAGANS. BUT HOW DID THE PAGANS PRAY? WHY IN HIS LETTER WAS THE APOSTLE JAMES SO SURE THE RICH WOULD EXPLOIT THE POOR AND DRAG THEM INTO COURT? WHY DID PEOPLE THINK IT WAS UNUSUAL FOR JESUS TO EXORCISE DEMONS "WITH AUTHORITY"?

To understand and apply the Bible well, you need two crucial sources of information. One is the Bible itself. The other is an understanding of the cultural background of the passage you're reading.

Only with the background can you grasp the author's original concerns and purposes. This unique commentary provides, in verse-by-verse format, the crucial cultural background you need for responsible—and richer—Bible study. This revised edition of the standard reference work in its field has been expanded throughout to now provide even more up-to-date information by one of the leading New Testament scholars on Jewish, Greek and Roman culture.

"A rich and lucid resource for understanding God's Word. This work is presented in a way that serves the needs of pastors in their sermon preparation, as well as lay members in personal Bible studies."

CHARLES BLAKE, presiding bishop of Church of God in Christ

"Most one-volume, single-author Bible commentaries or study Bibles are erratic in their coverage. . . . Craig Keener's work is an astonishing exception. . . . Keener has given preachers and lay Christians alike an invaluable resource for years to come."

CRAIG BLOMBERG, Denver Seminary

"We can no more ignore the humanness of the writers of the [Bible's] written word than we can discount the humanity of the living Lord. But their humanness had cultural connotations. . . . It is therefore not only helpful, but also necessary, for us to know of their cultures the better to understand the inspired word. The IVP Bible Background Commentary: New Testament *will prove most helpful in this regard."*

D. STUART BRISCOE, pastor and author

"The book is a rich and accessible mine of important information and a remarkable accomplishment."

D. MOODY SMITH, Duke University Divinity School
